950 Popular Bldg. Des Moines, Iowa

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

TODAY'S SHEEP PROBLEM

To the Editor of The Homestead:

Some farmers in my own neighborhood, scared half to death over the tariff changes, have already sold their sheep and gone into poultry keeping or dairying a little heavier. They feel that the bottom has fallen out of things and that they never can make anything any more with sheep. For myself, I think these men are more scared than hurt. We do not know yet what will be the effect of the reduction in tariff. So far little result is apparent in the quotations for wool. Seems to me it would be a good plan at least to wait for further developments.

The thing to do, where a farmer does not feel that he ought to go out of the sheep business, as I look at it, is to work hard for better and larger sheep. Sheep meat is now very popular in this country. There is no finer flavored meat in the world than mutton. Other kinds of meat being so high in price, the natural tendency with mutton will be to go up with the rest. And large, rangy sheep and big lambs will be in demand always. Leaving out of the question the matter of wool, then, we ought to strike for better sheep.

There are some breeds which run naturally to good size. These are the ones which will be most in favor. Take the Shropshires, the Hampshires, the Oxfords, the Lincolns, the Cotswolds or the Cheviots, all of which are inclined to grow to good size, and one will make no mistake in feeding and breeding for meat. These sheep all produce lambs freely and the lambs are as thrifty and fast to grow as are the old sheep, soon coming to marketable size. Most of these sheep, too, may be classed as twin-bearing, another point in their favor.

It may also be said for these sheep that they produce heavily of wool. By the right kind of breeding, choosing rams that are of a good wool-bearing strain, we may, in a little while, get about us sheep that will clip a good deal heavier fleece than the sheep we had in the beginning. This, added to the product of the meat, will, as it appears to me, tend to bring and to keep sheep well at the front always.

We have not done as well by sheep in this country as we might in the past. We have looked upon them as a kind of secondary matter in the farm economy. For that reason we have not realized as much from them as we should. I believe the tariff changes and the resulting better care and treatment the sheep which are kept on the farms of the nation will receive will result in making sheep more profitable than ever in the past.

Why should not we in this great country, with our excellent grazing facilities and our big farms to produce feed of every needed kind, be able to hold our own with any nation in the world? I am sure we can, and I believe we will. Sheep are fine animals to have on the farm. They need as little care as any we have. What we get from them ought to be practically clear gain, especially where they are kept in connection with other farm operations. E. L. V.

GRADING OF SHEEP ESSENTIAL TO SUCCESS.

To make the best gains, sheep, when brought into winter quarters, should be separated into several different flocks. The breeding ewes should be kept separate from the lambs, rams and the feeding flock. Weak, thin ewes should be separately yarded so that they may get their share of the feed. Rams should be kept in lots of ample size so as to allow them plenty of exercise.

By taking these precautions and regularly providing the flocks with suitable feed and an abundance of fresh water and by sheltering them in clean, well ventilated quarters, success in sheep husbandry is assured, according to Frank Kleinheinz, shepherd of the Wisconsin Experiment Station flocks.

The choice of feed depends, to a large extent, upon the condition in which the breeding flocks enter winter quarters. If in good flesh and having access to good roughage, such as clover, millet, alfalfa hay and roots or corn silage, hardly any grain is necessary, but if the sheep are in a thin, weak condition, no time should be lost in supplying them with hearty grain rations. Otherwise results at lambing time will be disappointing. Pure water shoud be supplied the flock at all times, and salt should be kept where the sheep may have ready access to it. Successful flockmasters consider it a serious mistake to provide their sheep with salt but occasionally, for under these conditions they are apt to eat too much, which oftentimes causes excessive drinking of water and a derangement of the digestive organs.

SHEEP.

ELK GROVE SHROPSHIRES

I AM offering thirty choice rams for sale. Twenty-four yearlings, five two year olds and one five year old, bred by Henry L. Wardwell. Prices $25.00 to $50.00. Address

REGISTERED Shropshire lambs and ewes of the best breeding and quality. Williard Miller, R-3 Anita, Iowa.

Echoes From a Kansas Farm

BY HENRY HATCH

It has been trying to storm for the past three weeks, but each disturbance has resulted only in a skiff of snow or a sprinkle of rain. The wind is blowing cold from the northwest this morning and the skies have cleared, so perhaps the weather's system has at last been purged.

There is not a great deal left to be done on the average Kansas farm, except a few days of manure hauling, and some have finished this. A great deal of help will be idle this winter, but the rush will be on again as spring draws near.

A few have become discouraged and are selling out to quit farming, but where the most of these are going to find employment that is more profitable is more than we can tell. Probably they do not know themselves. They haven't made anything at farming this year, consequently are going to quit, whether or no.

The local merchants complain that their credit trade is increasing. They say, too often, when a man wants credit he comes to his local merchant, but when he has the cash he sends to a mail order house. This certainly is not right.

Too many of the local merchants make no distinction between credit and cash business. This makes the cash buyer feel that he is paying a high price because of a heavy credit trade. Now and then a merchant is found who gives 5 per cent off at the time of purchase for cash. This makes the cash purchaser feel better, and even the credit customer could afford to take advantage of this discount by borrowing at the bank and paying his store bills in cash, as the average farmer can usually settle at the bank before the cost of the money has reached 5 per cent.

There has already been considerable land plowed that will be planted to corn in the spring. Going on the theory that one extreme follows another, there are many who expect next spring to be a wet one, so they are preparing for it by plowing as much as possible this fall. The soil has been in ideal condition for plowing the last month.

A great deal of fencing has been done this fall, to take advantage of the crops which have made a fall growth, such as wheat, rye and alfalfa. We have seen much alfalfa being pastured this fall, by horses, cattle and hogs, and have not yet heard of trouble arising from it.

Pasturing cattle on alfalfa has usually been considered dangerous because of bloat. We have seen several bunches of cattle out on alfalfa this fall, and have heard of no bloat. The risk has been taken because of the scarcity and high price of feed.

Tax-paying time has come again, and, as usual, the price is no less. In some cases the levies are higher. Reducing the taxation is a difficult thing, for we will have the things our taxes buy and the only way to have them is to raise the money to pay for them. There are folks who would have them but who kick on paying the tax necessary to get them. How they would manage is never explained.

The one large item in our tax bill is school expense. It is always the largest levy on the list, or, at least, is so here with us. But who would get along without public schools of present standard? There are those who say our schools are no better than they were twenty-five years ago, when the expense of teacher hire was only half what it is today, but how about the wages paid all other labor? Has not the price of a "hired hand" advanced from $15 to $30 a month, and do not a good many say the hand of today is not as work-brittle as the hand of twenty-five years ago?

We have sown oats on fall-plowed land and on land prepared in the spring with a disk harrow, both strips alongside and of the same quality of soil. Some years the difference has been in favor of the fall plowing and some years in favor of the spring disking. It all seems to depend upon whether the spring is wet or dry. When wet, the fall plowing is best; when dry, the spring disking is best. As one cannot tell beforehand what the weather is to be, he cannot tell which way will turn out best.

The oat acreage will likely be increased in the spring, as every farmer will have a place for some early feed. Seed will come high for those who have not raised their own, but by using a good drill, instead of sowing broadcast, a half bushel to the acre may be saved. This is no guesswork, as we have tried it and know that a bushel and three-quarters of seed sown with a drill will produce the stand that two bushels and a quarter will, sown broadcast.

Insect pollenization is the only sure method of pollenizing fruit trees. It may be partially done by the wind, but insects are the surest, and honey bees are the only insects that can be produced in sufficient numbers so early in the season. Also bees are the most thorough, causing the largest yields of fruit. Also the fact of their being rapid in their work, the pollenizing is done in a very short time, allowing the tree to pass on to the next stage, so the other insects have but little time to get in their work of damaging the fruit. In fact, fruit trees and bees seem to be copartners of each other. The farmer could well afford to keep a few colonies of bees even though they produced no honey at all.—Bee Journal.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

KNUCKLING.

I have an iron gray gelding seven years old that has knuckled his ankle on his left hind leg. This happened the 26th of October while he was in the pasture. Have been using turpentine, vinegar and saltpeter on it and keep it bandaged most of the time.

Have a veterinarian apply a plaster of Paris cast, if the skin is not blistered. If you cannot have this done, hand rub the part well three times a day and then put on bandages. Do not use the turpentine and vinegar. If it does not improve and lameness is present, line-firing and blistering should be done by a veterinarian. In old standing cases of knuckling the veterinarian should cut the tendons (tenotomy).

SORE.

A few weeks ago I noticed a small, hard lump on the right front teat of one of my cows. I squeezed it and a small hole opened from which came a yellow oily substance. Each time I milk her I squeeze this lump, but it is apparently no better. The last churning of butter was slightly bitter and I thought some of the oil may have gotten into the milk. The milk flow is not affected. The cow is apparently healthy and five years old.

Swab the sore once daily with tincture of iodine and it should soon heal. Bacteria in the milk vessels probably cause the bitterness of milk. Cleanse and scald utensils more perfectly.

MOONBLINDNESS.

Will you please publish again the recipe for moonblindness in horses?

Periodic ophthalmia (moonblindness) is incurable, but blindness may be retarded by giving a dram of iodine of potash in the drinking water twice daily at times of attacks and continuing for a week or so after the attack has subsided. At the same time keep the eyes covered with a soft cloth to be kept wet with a lotion composed of ten drops of carbolic acid and half a dram each of sulphate of zinc and fluid extract of belladonna leaves in a quart of soft, cold water.

ABNORMAL BREATHING.

Some thirty days ago I noticed a yearling heifer was breathing heavily and upon examination found a slight swelling in throat under jaw bones. Shortly after another heifer showed a round lump just back of point of jaw bone, but did not breathe heavily. Fearing lump jaw, she was disposed of. The lump was loose and perhaps the size of an unhulled walnut. Now three more have appeared with the same symptoms, breathing heavily and one has a small, round lump under point of jaw bone next to windpipe. All seem perfectly well and thrifty otherwise. About every four days they all discharge rather freely at the nose and at that time they breathe quite naturally, by as soon as the discharge stops they begin to breathe heavily again.

Have the tuberculin test applied, as tuberculosis is greatly to be feared as the cause of the symptoms described. If so the animals should be slaughtered under veterinary inspection. If they do not react it may prove that the trouble is due to lung worms. Lumpy jaw is scarcely the cause of the symptoms mentioned. Write us again if necessary after the test has been applied. Meanwhile isolate all affected animals.

SICK PIGS.

My pigs stop eating and lie around until they get very thin. Judging from what I know of it their droppings do not look like cholera. It is yellow in color, not black and some of their bowels run like water and some not. They get almost lifeless. They breathe hard if exerted. Two old sows that were in this condition got over it, but the pigs don't seem to. Have lost four or five. I gave them extract of poke root. They run on a pasture of about sixty acres of clover and blue grass and have been fed shorts and stock food in swill all summer, also have corn and plenty of water. On opening two of the pigs I found the liver a little dark colored and the lungs looked like they might have caught a severe cold, but they sleep in the hog house on a floor. There is no cholera near me. What do you think the trouble is?

We cannot decide what is the matter and you should at once employ an experienced graduate veterinarian to make an investigation. Cholera takes various forms and some of the symptoms you mention strongly suggest that disease. Until you can have the examination made feed light slop, without corn, and give the hogs a new pasture and be sure that all feed given comes from clean slop barrels and troughs. Stop feeding salt. It is a mistake to give such treatment right along. A pound or so of salt to each hundred pounds of feed used in slop is sufficient. Allow free access to wood ashes, charcoal and slacked lime.

The labor and money spent on the Panama Canal might have been used to better purpose on the highways of this country, Oliver Wilson, of Illinois, master of the National Grange, told the delegates to the national convention of the Patrons of Husbandry in his annual report. "The building of the Panama Canal is a national project of which all Americans are proud, yet the same amount of labor and money spent on our highways at home would create benefits nearer and probably more important to our own people," he said. Mr. Wilson said the federal government almost ignored the question of transportation between the country home and the railroad and the farm and the business center, except to give advice on road construction.

Figures collected by the Department of Commerce show that the exports of beef and beef cattle have fallen from $44,000,000 value in the eight months ended August, 1904, to practically $1,000,000 in the corresponding months of 1913, and that imports of cattle meantime increased from 9,357 in the eight months of 1904 to 340,105 in the same period of 1913, and their value from from $181,145 in 1904 to $5,031,842 in 1913. As to beef, the importations in 1904 were insufficient to justify their statement month by month, and the total value of beef imported for consumption in the full fiscal year 1904 was but $14,922, while the single month of July, 1913, showed a total importation of 642,394 pounds, valued at $56,993; August, a total of 1,151,626 pounds, valued at $89,204, and September about an equal amount.

He Thought His Hogs Were Dying From Cholera

He examined a 4 weeks old dead pig and found over a **solid pint of worms.** He had lost other young pigs in the same way and thought they were dying of Cholera! He began feeding Columbian Stock Powders and afterward said he could pick up worms by the handful most anywhere in the lot. His hogs are all right now. We'll furnish the name of this hog raiser on request.

Perhaps You Think YOUR Hogs Have Cholera, Too

Many hog raisers mistake worms for Cholera—a natural mistake because the symptoms are similiar—loss of appetite, drooping flanks," broken down backs" caused by kidney worms, feverish condition, coughing. Finally they slink off and die. But it's **not** Cholera—it's worms. But when Cholera **does** come it attacks the sickly, worm-infested hogs and kills them **quick.** In fact a good **90% of all hog losses are caused by worms.**

I'll Rid Your Hogs of Worms

You needn't lose a hog from disease nor have a wormy hog if you feed Columbian Stock Powders. Been on the market over 25 years and their merit is **proved.** Used by thousands of the most successful stock raisers. Not a food, but a highly efficient **medicine** that not only **kills** but **expels** all worms. Stimulate digestion, sharpen the appetite and speedily stop all digestive troubles. Say what you will—hogs **must** be kept free from worms, blood in good condition and digestive organs toned up if you hope to escape Cholera. The only **logical** method of preventing disease is by **internal treatment** with Columbian Stock Powders.

BEST FOR BROOD SOWS—Start right. Get strong, healthy litters without weaklings and runts by feeding Columbian Stock Powders to your brood sows. Keeps them free from fever and insures plenty of good pure milk.

Big Free Trial Offer Mail coupon stating how many hogs you have and I'll let you try Columbian Stock Powder 90 days before paying me a cent. Most liberal offer ever made.

A Method of Better Agricultural Credit.

CALIFORNIA is the first state to take advantage of the studies made by the recent government commission which visited Europe to learn of the methods there which enable farmers to secure loans at low rates.

The Agricultural Credit Corporation has been formed in California which intends to furnish money for irrigation and reclamation projects and for any other use of the farmer. The idea is to furnish the money on real estate mortgages at a lower rate than is now in vogue. An accurate idea of the plans of the corporation will be obtained from the following extracts made from the by-laws:

First. No loans shall be made by this corporation to any director or officer thereof, or near relatives of any such persons, nor to corporations in which any director or officer has any interest.

Second. No loans shall be made to any corporation unless a majority in interest of the stockholders of such corporation indorse and guarantee the same and unless a majority of the board of directors of this corporation shall approve said loan in writing.

Third. No loan shall exceed in amount 60 per cent of the value of the land accepted as security.

Fourth. Every loan made shall be based upon a comprehensive written application sworn to before a notary public and accompanied by a full written report by the local agent in all cases where the application is received through a local agent. In addition, a sworn appraisement of the property offered as security shall be made by two resident landowners of the county wherein the security is located, and the same shall be filed with this corporation.

Fifth. There shall also be prepared and filed with this corporation a full and comprehensive written report upon the financial condition of the applicant and the value and condition of the security offered together with the improvements situated thereon, and the water right, if any, appurtenant thereto or used in connection therewith, which report shall be made by either an officer and director of this corporation or by a specially trained and qualified salaried examiner, and such report shall be made independent of and without reference to the above-mentioned application, agent's report or appraisement.

Sixth. Three letters of inquiry regarding the character of the applicant, the value of the security, and the nature of the water right, if any, shall be sent to disinterested parties residing near the place where the property offered as security is situated.

Seventh. The data obtained from all such sources aforesaid shall be prepared for the information of the executive committee, and no loan shall be made without the written assent of at least three members of the executive committee, and if any member of said executive committee objects to the making of any loan, the application therefor shall be rejected.

According to the laws of the state of California, such a corporation may invest its capital and accumulations in the following securities:

First. In the purchases of, or loans upon interest-bearing bonds of the United States, or those for which the faith and credit of the United States are pledged for the payment of principal and interest.

Second. In the purchase of, or loans upon, interest-bearing bonds of any of the states of the United States not in default for interest on such bonds, including bonds of this state, or those for which the faith and credit of the state of California are pledged for the payment of principal and interest.

Third. In the purchase of, or loans upon, interest-bearing bonds of any of the counties and incorporated cities and towns, and duly organized school districts of any state or territory of the United States not in default for interest on such bonds.

Fourth. In the purchase of, or loans upon, interest-bearing bonds of irrigation districts.

Fifth. In loans secured by mortgage or deed of trust upon unimcumbered real estate, improved or unimproved, or in the purchase of, or loans upon, notes or bonds so secured; provided, that the principal so loaned, or the entire note or bond issue under such principal so loaned, or the entire note or bond issue under such mortgage or deed of trust, shall not exceed 60 per cent of the market value of such real estate with improvements taken as security. No mortgage insurance company shall invest in, hold or own any of the capital stock of any other corporation, nor make any loan, in whole or in part, on the security of the capital stock of any other corporation.

REMOVAL OF QUARANTINE WILL INJURE WISCONSIN INDUSTRY.

Wisconsin potato growers and large dealers in potatoes are up in arms over the fact that efforts are being made at Washington to remove the Quarantine Regulation No. 3, issued September 28, 1912, prohibiting the importation of potatoes from certain foreign countries because they were affected with a disease known as potato wart.

Practically all of the commission merchants in the Atlantic sea coast towns, who deal in potatoes, are urging the secretary of agriculture to withdraw this quarantine. There is also a committee of growers from such foreign countries now on their way to Washington to secure the withdrawal of this quarantine and they insist they are now in a position to convince the secretary that their potatoes are free from such disease.

"As a potato grower in Wisconsin," says one active in potato raising, "I am especially interested in this proposition. We certainly have enough to contend with here now, in the way of bugs, blight and weather conditions, without importing any more trouble, for though a great part of such importations would be used for food, some of them will undoubtedly be planted. Two years ago I know of one solid train load of imported potatoes being shipped as far west as Oklahoma, and though I am not very familiar with the potato disease in question, it does not seem to me that it could be completely eradicated in one season."

"The feeling of the Federal Horticultural Board has been that complete protective measures against the potato wart should be maintained, and that consideration should also be given to the question whether general prevalence of the powdery scab should constitute an additional reason for the maintenance of the quarantine.

It is assumed that few, if any, foreign potatoes will reach Wisconsin other than for special seed purposes, inasmuch as the last government report on the potato crop credits Wisconsin with 30,200,000 bushels of the total crop of 319,000,000 bushels. Nevertheless Wisconsin growers and shippers are greatly concerned for the sake of their potato industry because, indirectly, through trans-shipments anything that is introduced in the eastern states may be expected to find its way to Wisconsin.

An expert says: "From my present acquaintance with potato diseases as they occur in Europe and in the United States, I consider that on account of both black wart and powdery scab, the quarantine conditions according to regulations should be continued as they are at present. It seems to me that there is little reason for thinking that any inspection in the country of origin can guard us against the introduction of such diseases."

At the annual convention of the Wisconsin Potato Growers' Association, to be held November 20th and 21st at Rhinelander, strong protests will be made to the department at Washington against the proposed removal of the quarantine. Such protests are in order. There are plenty of potatoes in this country to supply the demand and prices would not be what they are except for the bullish reports in numerous papers this fall. There is no potato famine in sight and there is no reason why the embargo against foreign potatoes should be lifted and every reason in the world why great precaution should be taken to prevent the importation of potatoes from infected districts. If there is any likelihood of potatoes slipping in past the embargo, then it would seem to us that an embargo should also be placed against Belgium, from which country more potatoes will be shipped this year than are raised there, according to reports.

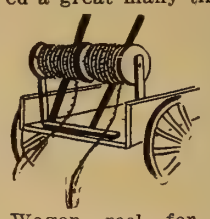
At this time, when Wisconsin is planning to organize the state so that certain tried and true varieties of early and late potatoes may be planted, each variety in a certain section, to give uniformity and make possible car load shipments from a given district, it is highly important that the quarantine prohibiting the importations of potatoes from the British Isles, Germany, Austria, Newfoundland, St. Pierre and Miquelon, should be maintained, even if the lifting of it has been urged by the various important firms and by the boards of agriculture of England, Scotland and Ireland through the usual diplomatic channels. Wisconsin is launching a campaign to completely destroy tuber pests and diseases. Wisconsin is planning to raise pure seed of standard market varieties for all commercial purposes. If this embargo is lifted the heart will almost be taken out of the movement to standardize potato growing in Wisconsin.—[Wisconsin Farmer.

HANDY DEVICES USEFUL IN FENCE MAKING.

A good fence adds several dollars per acre to the value of any farm. Not only are good fences needed along the road, but between every field.

When I was a boy it always fell to my lot to fix the fence and I grew to like the job. During various times in my experience I devised methods or learned of methods which helped out in the work.

One plan in particular that has helped a great many times is the use of a reel at the back end of a wagon box from which two or three wires are placed upon the reel as shown in the accompanying drawing. The ends of the wires are then attached to a post and the team is started. Usually it is necessary to have a brake upon the spools so that the wires will not reel out too rapidly.

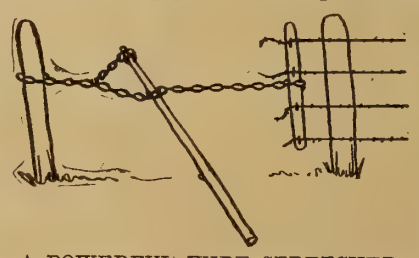


Wagon reel for stringing wire.

The best sort of brake is a piece of gas pipe. Set one end of this against a strip nailed to the bottom of the wagon and hold the edge of the pipe against the reel. This does not wear out so rapidly as a stick of wood. It is not always necessary to use the brake and with a good team one man can handle the job.

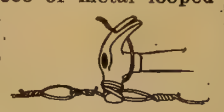
After the wires are laid in place, the next job is to stretch them and staple them to the post. When more than one wire is to be stretched at a time, by far the best method is to go to the end of the string, staple all the wires in their proper positions to a stick of wood, attach a chain to this which runs to a long pole, which in turn is chained to a post. With this pole all of the wires can be stretched at once.

With a long pole a great purchase can be had and there is no better wire stretcher, at least if there is, I have never seen it. As soon as the wire is stretched to the proper tension, an assistant can put in the staples or the lever may be tied to hold the wires taut.



A POWERFUL WIRE STRETCHER.

The best sort of wire splicer I have ever used is a piece of metal looped at the end with a little notch on one side. I have also used a common claw hammer both as a splicer and as a wire stretcher. Quite often, in cases of emergency, I have used this method with good success.

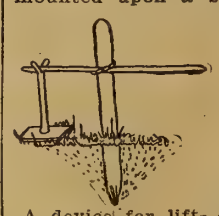


An emergency wire splicer.

Make a large loop in the end of one wire and insert the end of the other wire through this. Wrap this end about the head of the hammer once and then insert it in the claws. Slip the head of the hammer through the loop and turn it, winding the wire about it until the proper tension is secured. Then it is easy to make the splice, using the claws for twisting the one wire around the other.

Once in a while it will be necessary to move a fence. It is a tedious job to dig up posts, but this is not always necessary. If the post is not set too firmly it may be easily lifted with a pry, similar to the one shown in the accompanying drawing.

This pry consists of a pronged stick mounted upon a board. A long pry pole is inserted in the crotch. This pole is run through a chain which is looped loosly over the post. The chain is dropped to a position below the level of the prong and the pole lifted. This will usually start the post and after it is lifted to a position so that the chain is level with the pry, by loosening the pole, the chain will drop back again and the post can be lifted the rest of the distance out of he ground.



A device for lifting posts.

We must all admit that the modern fence is the woven wire fence. If you are planning for a new fence, by all means use woven wire if possible. When putting in woven wire, we usually consider it to be a permanent job and, if permanent, we should certainly have permanent posts.

The corner post should be set in concrete, in fact, it is well to have it made of concrete entirely. If a good heavy timber can be secured, however, it will last almost as long as you need it if set into a concrete base. Dig the hole about eight or ten inches larger on each side than is needed for the post. Set the post in position and fill up the hole with concrete instead of dirt.

In handling this sort of a job use a wagon with low wheels, if possible. If you happen to have one with a wide bed, so must the better. Load into this a barrel of water, a supply of cement, coarse gravel and sand. If the bed is not tight, put a mixing board on the rear end. When you come to a post, mix sufficient concrete for the post, then drive to the next post, and so on. This will save a great deal of time and will be just as effective as if the concrete were mixed on a large mixing board on the ground.

John Y. Beatty.

DON'T MISS

these announcements that are now appearing in this publication, from time to time, relating to

Landreth's

SEEDS WHICH SUCCEED

There will be another one soon. Look for it. It tells you how to get the big new catalogue for the coming season.

D. LANDRETH SEED CO.
BRISTOL, PENNA.

CLOVER New Crop Iowa Grown Recleaned TESTED and Inspected Red Clover. Also Mammoth, Alsike, Alfalfa and Sweet Clover of choicest quality. TIMOTHY Blue Grass, etc., at low prices. Now is the time to buy. Ask for samples and copy of our Special Clover Seed Circular. Large illustrated catalog of Seed free. IOWA SEED COMPANY, Dept. D1 DES MOINES, IOWA

SEEDS WANTED

THE past season we have bought Timothy, Clover, Alsyke and Mixed Timothy and Alsyke from hundreds of farmers in Iowa and surrounding states. Sample packet free. Will make you offer by return mail delivered at your station. Get our bid before selling. Write today.
THE ADAMS SEED COMPANY
Box 61 Decorah, Iowa

CLOVER CHEAP Now is the Time to Buy Prices lowest in years. Buy before advance and save money. Get our special low prices and free samples of our Iowa Grown New Crop Recleaned Tested Clover and Timothy Seed. Also Alfalfa, Alsike, Sweet Clover. All kinds grass seed. 76-page catalog free, quoting all field seeds. Save money by writing at once.
A. A. BERRY SEED CO., Box 103 CLARINDA, IOWA

MONEY IN GRAIN.
$10.00 buys puts or calls on 10,000 bushels of wheat or corn. No further risk. A movement of 5c from price gives you an opportunity to take $500; 4c, $400; 3c, $300, etc. Write for particulars. Finance Brokerage Company, Desk 8, Finance Bldg., Kansas City, Mo.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, November 15th.—The week's cattle run here is a little less than last week, but unequal distribution has been a demoralizing influence again. Big Wednesday gobs are the rule now paralyzing the market for that day and the rest of the week. Down East conditions are still bad, but western markets have only had moderate supplies, the six points reporting a five-day run of about 166,000 against 178,000 last week and 180,000 a year ago.

Next week will develop an influence adverse to beef in the shape of poultry consumption. Cattle bought next week will reach the beef market at the time poultry is getting action owing to Thanksgiving day. This ought to restrain the marketing impulse as buyers will work the poultry argument to the limit. What the trade needs is a brief application of the rest cure.

At the close this week all of Monday's bloom in the cattle trade has been brushed away and a little more. This is especially so in the case of plain, heavy cattle which are 25c lower than last week while the good heavy kinds show a net loss of about 15c. Compared with the high spot Monday declines range from 15@40c, choice light cattle yearlings and cheap killers in the 1,000 to 1,100-pound class showing least of it. A class of 1,500-pound bullocks worth around $8.85 at the close last week is now on an $8.65 basis, while plain heavy cattle of the same weight, but on the grasser order are selling around $7.75. The 1,000 to 1,200-pound class of grassy steers selling at $7.25@7.50 shows no loss for the week, nor do the prime handyweights or yearlings although both classes are about 15c lower than the high spot Monday. Above the $9 line it is now a market for a few packages of weighty cattle of superlative quality and even then they must not carry too much avordupois, yearlings and choice handyweights. These constitute but a small proportion of the whole; in fact $7.75@8.75 has bought a large slice of the crop this week, while a few prime heavies are reaching $9.25 and best yearlings range up to $9.60.

That big cattle are not all out of feeders' hands yet is evident and after the middle of December they will not be wanted, consequently holders have no great distance to go with them. Owing to feed scarcity in many sections there is a disposition to cull closer than usual, preparatory to going into winter quarters and this is having the effect of swelling the run.

Classes of butcher cows now selling upward from $5.50 are closing largely 15@25c lower than a week ago or 25@40c below Monday, while the plain and medium killers, selling from $5.50 down are holding within 10@15c of late last week, having shared but slightly in the Monday up-turn and canner and cutter classes are close to steady with a week ago. Strong weight heifers have worked into extreme disfavor as the trade has progressed and at the close of a right decent to very good 850@1,000-pound class is having to take $6.00@6.50 that were easily 40@50c higher sellers on the high market of Monday and most of them, as well as the medium and plain light and handyweight stuff and prime heavy grades are 25c lower than a week ago.

That there is relatively good outlet being found for the cheap grades of beef which should tend to hold butcher cattle values for further sharp price recessions is an open secret, but that buyers will use for the immediate future the "poultry season" argument for all it is worth as a club over the market is not to be doubted and generous marketings would serve them well in holding the advantage they have gained on recent sessions. With moderate receipts of the immediate future, however, the selling side stands in a position to have a good deal to say as to the course of the trade, now that range stuff has practically disappeared for this season.

Vealer trade withstood well this week, better than anyone expected, the coming of the "turkey season," but is due to get its bumping next week unless trade forecasts and the course of the market at this period in recent years are wrong guides. Sales early Friday were up close to the week's best level and on a stronger basis than a week ago for choice kinds, while others showed little change from late last week. Supply has been slightly in excess of last week and a little short of a year ago. Bulk of the good vealers now selling at $10.75@11, choice up to $11.25@11.40.

Declines enforced since Monday have carried stock and feeding cattle values to levels 10@25c below last week's closing basis and put the trade back to the extreme low spot struck late in October. Heavy receipts, a generous layover last week, bad snow storms throughout Indiana, Ohio, Pennsylvania and Michigan early in the week which seriously crippled railroad traffic to those sections and kept prospective purchasers at home, together with a glut of Canadian and Southeastern stocker stuff at Lancaster, Pa., combined to seriously depress the market. Choicely bred yearlings have had the best call, but nothing has escaped loss. Plain 650 to 850-pound stockers are selling down to $5.65@6.15 a fair to very good class of 700 to 900-pound weights in fair stocker flesh is going at $6.25@6.65, extra good to choice of like weights and right good flesh at $6.80 @7.10 and a fancy kind at $7.15@7.35. A good many trashy and common light stockers dropped down to $5.00@5.50. Feeders of plain sort sold down to $6.25 and lower while good colored, fair fleshed 900 to 1,100-pound weights are selling at $6.50@6.85 very good feeders with quality and flesh around $7 and a choice to fancy fleshier sort of selected grade go at $7.15@7.50.

An increase of 10,000 hogs at Chicago this week over last and a gain of 40,000 in the aggregate at eleven markets failed to provide killers with sufficient ammunition to successfully bear prices. Eastern shipping demand being of good volume and absorbing a fourth of local receipts, or about 37,000 within five days. Closing prices Friday were 10 to 15c higher on good hogs of butcher and heavy weights, while light stuff, which showed up in profusion, closed on much the same basis as a week ago. The strength shown in the trade makes the forecasting on the future course of the hog market less evasive in tone than one week ago. Doubtless the 40c break early last week, followed by prompt recovery, convinced the country that no bargain sales of prolonged duration are probable.

Unless packers prevent such "come backs" they are likely to make the contest a two-sided affair. Hogs are now on a basis where they can be fed out, and it is improbable that bids of 7c in the country will jar loose any considerable number at any time during the coming winter. The advance this week is convincing refutation of the contention that hogs are not cutting up at a profit, or that fresh meat demand is deficient. Along toward March it seems probable that substantial figures will be written on sale tickets, provided, of course, that the country does not go to the cleaners in a financial sense meanwhile. There is a possibility of tight money and subsidence of industrial activity. Should this accentuate and high cost of feed attract hogs to market prematurely, more bumping may be effected, but with normal conditions, it is very doubtful if many house hogs will be put up below $7. The Friday trade was on the following basis:

Bulk of sales	$7.80@8.05
Mixed, 215 to 250 lbs.	7.70@7.90
Mixed, 170 to 220 lbs.	7.75@7.90
Medium weights	7.90@8.10
Light butchers	7.85@8.05
Heavy butcher	8.00@8.25
Light shippers	7.85@8.00
Heavy shippers	8.00@8.25
Heavy packing	7.65@7.85
Rough heavy packing	7.00@7.65
Throwout packing sows	6.75@7.40
Fair to choice light	7.60@7.90
Light-light, 135 to 155 lbs.	7.20@7.65
Pigs, good to fancy	6.40@7.40
Pigs, inferior to fair	5.25@6.25

Live mutton values shot up like a rocket early this week and then came down the same way. The week-end trade is demoralized and anywhere from 50c to $1 lower than Tuesday, high day of the week, on fat classes, lambs showing the long end of the break. The decline left sheep 25 to 35c lower than a week ago and lambs of medium and heavy class frequently show a 50c break.

When the going was best on the high close of the hot Tuesday session, sellers were successful in hanging up a set of record November quotations on fat lambs and in cashing mature muttons at the highest prices for November since 1906, lambs touching $8.25, yearlings $6.75, ewes $5 and wethers $5.50. The extent of the decline since is indicated by an extreme limit on lambs of $7.50 on Friday, sales of prime ewes and wethers at $4.25 and $5, respectively and an outside quotation of $6.25 for prime light yearlings.

In the light of what has happened the predicting of future events is a dangerous pastime. A few facts, however, that shippers should take into consideration stick out prominently, to wit: Quality is improving, average weight picking up and there is already shown a disposition to discriminate against heavy lambs that will undoubtedly become more marked as the season advances. Hence the marketing of fat lambs or yearlings that are approaching the undesirable weight of eighty-five pounds and up would seem advisable. On the other hand the holding back of stock that is lacking good finish by those in a position to carry the stuff through a period of bad weather appears equally advisable. Demand, particularly during the latter half of next week and the week following will be crippled by the advent of the poultry season, and the first week in December—International week—usually sees a more or less badly congested market. The slump this week, however, is counted upon to check marketings temporarily. As noted last week in these columns a set of choppy markets is ahead with the weather a strong governing factor. The feeder who lets his stuff come when it is fat and not before instead of the one who attempts to pick out a probable high spot on which to unload will probably fare best. Closing quotations follow:

Lambs, good to prime	$7.15@7.50
Lambs, fair to good	6.75@7.15
Lambs, common to fair	6.25@6.75
Lambs, culls and coarse bucks	5.50@6.00
Lambs, fair to best feeders	5.75@6.75
Yearlings, good to ch. handy	5.90@6.25
Yearlings, fair to good heavy	5.15@5.75
Yearlings, feeders	4.75@5.50
Wethers, good to prime	4.75@5.00
Wethers, fair to good	4.50@4.75
Wethers, feeders	4.00@4.60
Ewes, good to choice heavy	4.00@4.25
Ewes, good to choice handy	4.00@4.35
Ewes, medium to good	3.75@4.00
Ewes, culls	2.75@3.50
Ewes, breeding, 1 to 3	4.75@5.25
Ewes, aged, solid mouths	4.25@4.65
Ewes, feeders	3.15@3.75
Bucks, fair to choice	3.50@3.75

THE VALUE OF SHREDDED FODDER.

To the Editor of The Homestead:

For a number of years now the corn husker and shredder has been pretty generally employed in handling the thousands of acres of fodder harvested by the farmers of the middle West. The advantages gained by shredding are many; it has been well demonstrated that the shredded product is an economical food in these busy farming days. First, the same amount of fodder will feed at least one-third further when shredded than when fed from the shock, even though the shock fodder is fed to the best advantage. All the thin parts of the stalks, the leaves and husks, are eaten by the stock and the rest is wasted. Since the long stalks are rather unhandy to feed in the mangers in the stables, many times they are scattered on the ground in the feed lots where the stock run over them while searching for the choicest portions. This necessarily makes the waste greater than if the fodder was fed in the barn. When shredded, however, practically the entire stalk is rendered available for feed and the waste is reduced to the minimum.

Much more of the shredded product can be stored in a given space. Many farmers who do not shred haul to the barn before winter as much of their fodder as they have storage room for, yet only a comparatively small quantity, so great is its bulk, can be thus stored in the average barn. When shredded, a much larger quantity can be put into a small mow. And it is put into the barn in good time and it is fed in the barn. All feeding is done in the dry. There are no cold hands, nor heavy, unwieldy bundles to carry to the stock. For, with whole stalks, the average farmer prefers to feed the wet, snowy fodder in a lot, be the latter muddy or ice-covered, rather than in a barn.

Shredded fodder is much more convenient to feed than the shock fodder. The time and labor saved in feeding shredded fodder about compensates for the time and labor taken in shredding. The shredded article can all be fed in the barn and what little refuse there is, such as the coarser parts of the stalks which are left in the mangers after the edible portions have been picked out, makes a good bedding and absorbent material, and it is ready immediately to go out with the manure for the enrichment of the fields. The stalks being mashed, the pulp is exposed and this readily absorbs all liquid manure, and, as a consequence, all of the refuse works into manure much more quickly than the whole stalks. As a general rule, whole cornstalks are undesirable in the production of manure. They are very unsatisfactory when used for bedding, as they make the handling of the stable manure difficult since they are so slow to decompose. The manure spreader naturally runs harder when the stalks are present in the manure. Even when fed in a field cornstalks are a nuisance for the next crop.

Every farmer who has had any experience in feeding shock fodder through the winter, in all kinds of weather, knows that it is an unpleasant task. The majority of farmers feel amply repaid for the work and expense of shredding by the satisfaction gained in having both fodder and corn taken care of before bad weather and by the increase in value of the feed and manure. On a cold winter day it is worth a great deal to a man to know that his feed is all under shelter, and he does not have to face a cold wind out to a cornfield and haul in a load of fodder that is covered with ice or snow, perhaps. And all the time that the fodder is left out in the field, it is deteriorating in feeding value. Being exposed to the storms of winter, many of the best parts are blown away, and much of the fodder gets down on the ground to rot, so that by spring it is almost worthless for feed. Probably the greatest saving effected by shredding is that of having the fodder stored and packed in the mow so that it does not lose its feeding value or its palatability as when left out in the shock, or even when the whole stalks are stored away in the dry. Corn fodder seems to give up much of its strength when exposed to the air. Shredding prevents this to a large degree by reducing the fodder to a pulp so that it may be packed sufficiently to exclude the air and to retain its original flavor. Shredded fodder can be fed to horses and cows with good results as late as the middle of May. The gain in the increased amount of feed furnished by the shredded article, the reduction of waste to a minimum, and the ease of handling, makes it possible for the farmer to winter more stock from the same acreage of fodder, and at the same time more manure is produced.

A few farmers claim that shredding wastes too much of the corn. In reality, however, there is very little waste, not so much as when the fodder is husked by hand. The shredder takes nubbins and all out of the fodder; with hand husking many nubbins and some of the larger ears of corn remain in the fodder. A portion of these are wasted if the fodder is fed in yards. Then, too, in husking by hand in the field and throwing the corn on the ground, there is more or less waste in the form of shelled corn, while with the shredder all such waste is at the farm where something will get it. A certain amount of shelled corn is needed anyway for chicken feed and for chop feed, so nothing is wasted if the shatterings are gathered up immediately. And if the ears of corn are a little ragged, they can be fed just the same as the corn that is husked clean.

As farmers usually exchange work at shredding time, it is only a small outlay of money to obtain a sufficient amount of help, and many farmers would hire help anyway if the husking was done by hand. It seldom costs much more to get the stalks cut up fine and stored away in the dry, and to get the corn husked, than it does to get the fodder husked in the field and the corn and bundles of fodder hauled to the barn.

For the largest returns from shredding, the work should be done at as early a date as possible after the fodder is sufficiently dry. As a general rule fodder can be shredded in from four to six weeks after cutting, this period varying with the condition of the fodder at the time it was cut, the size of the shocks, the condition of the weather, etc., but, in most cases, it is possible to get the shredding done before winter. Fodder should not be shredded until perfectly dry. If the stalks are wet or contain sap to any extent, heat and molding will probably result, which will spoil the fodder for feed. Besides this, the danger of setting the storage buildings on fire from spontaneous combustion is by no means small. After the shock fodder is properly cured out, however, it is a large waste if shredding is delayed, for the stalks deteriorate quite rapidly in feeding value.

The best place for shredded fodder is in a barn mow. It does not keep well in a stack unless it is topped with something to turn water. Great care should be exercised in storing the shredded product, otherwise the mass may heat and spoil soon after it goes into the mow. It will keep more safely when it is not tramped; the more solid it is packed the more liable it is to heat. It is sometimes necessary to have one or more hands in the mow to distribute it properly, but it should not be tramped. The shredded fodder, being compact, ferments slightly and sweats or cures quite similarly to new-mown hay. It should not be molested in any way, no matter how hot the mass gets, until it has gone through the sweat.

FIELD MEN.

M. T. White, western Iowa, and northeastern Nebraska. Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

J. C. Price, southern, central and western Nebraska. Address 145 S. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

H. S. Hoard, Wisconsin. Address Room 201 Washington Building, Madison, Wis.

FIELD NOTES.

Lewis Kreitzberg, Griswold, Iowa, is advertising some good Duroc boars for sale on page 45.

U. G. Burton, Storm Lake, Iowa, advertises immune Duroc Jersey boars for sale on page 45.

Wm. Bauer, Audubon, Iowa, advertises fifteen immune Duroc Jersey boars for sale on page 45.

C. R. & R. W. Steele, Ireton, Iowa, advertises forty head of immune Duroc Jersey boars for sale on page 45.

Thirty high-class immune Duroc boars are advertised for sale by R. F. Aikman, Audubon, Iowa, on page 45.

Edw. Dooley, Selma, Iowa, offers Hampshire boars for sale at most reasonable prices in his advertisement on page 40.

Hampshire boars at special prices are advertised for sale by Roy E. Fisher, Winside, Neb., on page 46. Get your order to him at once if you want o good one.

Fall and spring boars of the very best of Hampshire breeding and nicely belted can be secured of Wood & Wescott, Sheffield, Ill. These men can please you. See page 46.

O. E. Osborn, Weston, Iowa, offers four very choice spring boars for sale sired by his great boar, King Gano. These are strictly choice. If you want one you will have to get in touch with Mr. Osborn at once.

On page 40 Wm. H. Nolin, Monroe, Iowa, announces that he has for sale twenty-five Poland China boars of spring farrow and two herd boars. These hogs have been given the single treatment and are in good thrifty form.

Profit farm boilers for the cooking of feed for animals have been made and sold to farmers for so many years that they have really become a necessity in farm equipment. The Profit is advertised on page 18. Read what it says. Every statement will be proved to those who write for further particulars to D. R. Sperry & Co., Batavia, Ill.

For the ordinary power requirements of the farm, the Waterloo light farm tractor is filling a long-felt want. It can be used for practically all of the farm work. For plowing it has special adaptation. There is no risk in purchasing any of the Waterloo goods as they are all sold under a strong five-year guarantee. For catalogues and special prices, write to the Waterloo Gasoline Engine Co., 179 W. 3d Ave., Waterloo, Iowa. See advertisement on page 12.

With as many as seventy illustrations which make it valuable in its lessons in veterinary work, the Practical Home Veterinarian becomes a book that should be in every farmer's library. It is the work of Dr. David Roberts, a well-known veterinarian, prominent above most others and an acknowledged authority. While most druggists supply this book without cost, a special copy of it may be obtained by sending 25 cents to Dr. David Roberts Veterinary Co., 9143 Wisconsin Ave., Waukesha, Wis. See advertisement on page 33.

Buyers of Duroc Jersey pigs of either sex should read the advertisement of A. Nevins & Son which will be found on page 40. The Nevins herd has in service herd boars of unusual quality and popular lines of breeding such as Col. Kruger, Defender's Likeness, Model I. M. and Prince A's Col. The latter was first-prize pig under a year at the International Show of 1912. Every one of them traces to championships at leading shows. Note prices. Send orders to A. Nevins & Son, Modesto, Ill.

Some splendid Duroc Jersey boars fit to head good herds are offered for sale by P. W. Weberg, Denison, Iowa.

J. A. Beaumaster, Elma, Iowa, can supply our readers with big-type Poland China boars of March and April farrow, sired by Long King and O Wonder, a grandson of A Wonder. His prices are very reasonable. See page 47.

Hampshire boars of the same breeding as the silver cup winners at Des Moines in 1912 can be secured of F. T. Quire, Sully, Iowa, at $35 each. These boars have had the double treatment and are guaranteed breeders. See page 46.

Geo. T. Pearce & Son, Bloomfield, Iowa, can supply a choice lot of February and March Hampshire boars, open sows or sows bred for early spring litters to Corrector, a prize-winning sire, at reasonable prices. See page 46.

B. W. Hunt, Denison, Iowa, is offering a splendid lot of fall and spring Duroc Jersey boars for sale. He is making cut rates on these boars in order to close them out and if you want one it will pay you to go and see him right away.

The big advertisement of R. Wilkinson & Sons on page 42 makes interesting reading for farmers or any others who contemplate the purchase of Shire horses. For their special low prices or additional description write R. Wilkinson & Sons, Mitchellville, Iowa.

Allen Bros., Russell, Iowa, advertise O. I. C. boars on page 40. Their Highland herd has occupied a prominent place among the breeders and has produced prize winners at the Iowa State Fair. The pigs offered for sale at the present time are of the big, smooth type.

Guaranteed stock watering tanks are made by the Burnham Mfg. Co., and advertised on page 24. The firm also makes hayracks and other devices used on the farm. An illustrated catalog and special price list may be obtained by writing to the Burnham Mfg. Co., Dept. A, Charles City, Iowa.

Well-bred registered Holstein cows are offered for sale by C. S. Mulks, of Riceville, Iowa, also bull calves. Prices, descriptions and other information will be learned by writing to the address named. The herd is a good one and has made some excellent records. See advertisement on page 21.

On March 24th, Ben Broughton, Lake View, Iowa, will make a sale of Hereford cattle and he will have a great lot of bulls and females for this sale. Included will be his entire show herd and an extra good lot of young bulls. Later in the season we will tell Homestead readers more about what he will sell in this sale.

Louis H. Scheetz, Belle Plaine, Iowa, announces a sale of Short-horn cattle to take place at his farm, January 6th. At this time Mr. Scheetz will sell about sixty head of good useful breeding cattle that should interest the farmer who wants to improve his beef cattle. Full particulars will appear in later issues of The Homestead.

M. E. Merfeld & Sons, Greene, Iowa, offer for sale high-class Duroc Jersey boars sired by Merfeld's Wonder, Chief's Model 2d, Choice Advance, Chief Select Jr. and Notcher Chief. The spring pigs are a great lot and will suit anyone looking for size, heavy bone, length and smoothness. If you want a good boar write this firm mentioning The Homestead. See page 45.

Bert A. Randell, Mt. Zion, Iowa, breeder of Chester White swine, writes: "We have sold all of our boar pigs, but still have twenty-five or thirty gilts that are good in every respect. We are making an attractive price on them for the next thirty days, and will guarantee satisfaction. These gilts are of the best blood in the state." Mr. Randell's advertisement appears on page 44.

It is a fortunate circumstance for the agricultural interests of the state of Iowa when an institution like the Chicago Stock Farm is established. This for the reason that while the work is conducted in an extensive manner, it is along practical lines that insure profitable returns. The Chicago Stock Farm is one of the greatest dairy cattle institutions in the West. It maintains a herd of Holstein-Friesian cattle quite large in numbers, but better than that which show lines of breeding that have accomplished greatest results and individual performance that promises to attract even greater success than in the past. During the year 1912, ten cows of the Chicago Stock Farm made official tests that were remarkable in their results. A single cow gave 25,660 pounds of milk from which there was produced 1,025 pounds of butter. The average of the ten in pounds of butter in one year was 882, which is indeed an extraordinary showing. The herd is headed by Johanna Bonheur Champion and Maplecrest Butter Boy De Kol. The former is from the great Gillett herd. His three nearest dams averaged 1,013 pounds of butter in one year. He has proven a breeder of remarkable prepotency and has been so generally recognized as a bull of unusual merit that the demand for his services has covered the entire territory from New York west. The last-named bull is from the Dimick herd and he is the nearest male relative to the world's champion cow, Banostine Belle De Kol that made 1,322 pounds of butter in one year. The Chicago Stock Farm is offering for sale young bulls of high individual excellence and with A. R. O. records on the part of his ancestors. The herd is annually given the tuberculin test and for four years past has been free from any suspicion of disease. Quality considered, very reasonable prices will be quoted on these young bulls. Address R. B. Young, Buffalo Center, Iowa.

The Hillside Herd of Hampshire swine are advertised on page 46 of this paper. At the present time spring boars are offered for sale. These are from strains that have been prominent at the big shows. Reasonable prices will be quoted. Address inquiries to W. M. Sipherd, Grand River, Iowa.

That old veteran Poland China breeder, John Schmieder, Remsen, Iowa, offers some great boars for sale, sired by Blue Valley Chief and Pawnee Defender on page 47. These are all immune and are strictly choice boars. He also offers three good fall boars for sale. He is making special prices on these boars for the next thirty days.

Duck Brand Rubber Boots are advertised on page 13. These boots are made from pure rubber, reenforced against all strain, and also receive a proper attention to shaping which makes them extra comfortable. The additional fact that they are sold at reasonable prices makes a list of their superiorities which is hard to equal. Most dealers sell them. They are made by the Duck Brand Co., 22-26 S. Market St., Chicago, Ill.

F. H. Dickey, Emmetsburg, Iowa, owner of one of the very best Duroc Jersey herds in the northern part of the state, is offering a splendid lot of Duroc Jersey boars for sale on page 45. These boars are all immune and they are right in every way. He has a number that are the kind that should go to the head of good herds. He is making special prices on them as he wants to close them out within the next thirty days.

Genasco ready roofing is advertised on page 8. This roofing comes very near to being a natural roofing material. It is made from Trinidad Lake Asphalt which gives it permanency, fireproof and waterproof qualities and retains at the same time an elasticity which makes it particularly desirable for the purpose. Samples and a valuable guide to roofing may be had by writing to The Barber Asphalt Paving Company, Philadelphia, Pa.

Any of our readers who may be contemplating a change of location will be interested in the announcement of southern lands which appears on page 27 of this paper. Good lands in desirable southern locations are offered at from $15 per acre up. These are suited to truck raising, poultry farming, fruit growing and in fact, general farming. A growing season of from seven to ten months offers advantages that northern farmers certainly appreciate. Write for "Southern Field" a magazine devoted to the promoting of southern lands. Address M. V. Richards, Land and Industrial Agent, Washington, D. C.

The advertisement of the Central Iowa herd of Chester White hogs which appears on page 40 offers an opportunity for farmers and breeders to buy spring boars of that breed for a reasonable price. The herd is made up of the most popular strains of blood from the best and most popular herds and afford animals of excellent merit. They are the get of Iowa Pride, Royal Banner, Barr & Raes, Pathfinder and Pathfinder 2d. Their special bargain is offered in Iowa Pride, a son of the Iowa State Fair grand champion of 1913. For additional description or special prices, write to G. O. Satre, Jewell, Ia.

While the buying of furs is looked upon quite often as a matter of extravagance, it is in fact in most cases highly economical. Especially is this the case when Lanpher furs are bought. These are advertised on page 10. They are the result of the last forty years of experiment of expert designers and furriers. These furs have style, fit, durability and a distinctive beauty. The Lanpher fur book gives illustrations, descriptions and prices and shows that, after all, the best is the cheapest in fur goods as in others. The firm also manufactures mackinaws, ulsters, sheep-lined coats and men's fur-lined coats. For a copy of catalog, write Lanpher, Skinner & Company, St. Paul, Minn.

On Wednesday, December 10th, will occur the annual offering of imported and American-bred Percheron horses at A. L. Robison & Sons' Leslie Farm, Pekin, Ill., and for this event forty head have been cataloged, the equal of which has rarely if ever been seen in a sale offering. Thirty-four mares and fillies are listed, twenty of them imported, and ranging from yearlings to four year olds, while the fourteen American-bred ones, many of them produced at Leslie Farm, are right in every way. The production of high-class Percherons has been carried on at Leslie Farm for a great many years, and out from it have gone some of the best horses the country has ever seen. Five of the greatest gray stallions known to the breed have stood at the head of the Robison stud, namely Powerful Seducteur, Hisse Haut, Rabelais and Moulinet, and from them have sprung an almost endless line of good horses. There are six stud colts listed for the coming sale, the get of Rabelais and Moulinet, that are a decidedly attractive lot and should be in demand sale day. It is seldom that so much value and good breeding is embraced in one sale as will be found in this offering, and those who attend will be in no way disappointed. The Robison firm has made many public offerings of good horses, but never as good a one as this will present to the public December 10th. In later issues we will speak in detail of much of the offering. In the meantime write for the handsomely illustrated catalog to A. L. Robison & Sons, Pekin, Ill., and arrange to attend the sale. This sale follows the Corsa sale of Percherons at White Hall, Ill., December 9th, and there will be

special sleeping car service between the two points. When writing for a catalog kindly mention this paper. See advertisement on page 39.

The annual breeders' sale of registered horses of the different draft breeds will be held in the coliseum at Bloomington, Ill., January 27th to 30th inclusive and entries will close December 30th. Many of the leading importers and breeders are consigning to this sale and parties wishing to dispose of their surplus stock will find this a good outlet. Entry blanks and full particulars can be secured by addressing the manager, C. W. Hurt, Arrowsmith, Ill.

The American Steel and Wire Company having been so highly successful in the promotion of the American Field fence have introduced new ideas in heavier galvanizing and steel posts. These additions to the original perfections of the American fence are making it a strong competitor for the first place as a useful and long-lived fence. For catalog giving complete description and special prices, address American Steel and Wire Company, Chicago, Ill. See advertisement on page 18.

The Perfection Pork Products Co., Waterloo, Iowa, have an advertisement on page 32 which ought to attract the attention of every farmer who wishes to put up ham and bacon in such a manner as to make them attractive. This company is putting out a number of different preparations for the curing of meats. Their advice is based on actual experience and they will be glad to furnish valuable information to every reader of this paper who will write to the address named above.

Highest cash prices are paid for hides and furs by the National Fur & Tanning Co., whose advertisement occupies a prominent place on page 11. In selling hides and furs the value depends upon the manner in which they have been prepared. The National people have printed a book of instructions on the care of hides. This tells what to do with them from start to finish and how to ship them. If the advice is followed there will be a decided increase in valuation and top prices may be looked for. This book is free. Write for it to the National Fur & Tanning Co., Dept. 4478, Omaha, Neb.

In a recent letter from L. R. McClarnon, Braddyville, Iowa, he says: "I have just sold a Big Orange boar to F. O. Brown, Wapakoneta, Ohio, the other day on a telegram for $300. While this looks like a good price, it is dirt cheap for him as he was one of the best I have raised this year. He weighed 700 on scales, is seventy-four inches long, seventy-four heart and seventy-four flank, and had a nine and one-half-inch bone. He was seventeen months old, was active as a pig and he did not have a defective place in his whole make up." Mr. McClarnon is making great preparations for his February brood sow sale, when he expects to sell the best bunch of sows that has ever left his farm.

John H. Fitch, breeder of Poland China hogs makes a new announcement on page 46 of this paper. Writing with reference to the pigs he has for sale, Mr. Fitch says: "My pigs are doing fine, and my advertisement in The Homestead is bringing its share of business. I have recently made sales to parties from Indiana to the Gulf in Texas. Please tell your readers that I have still for sale twenty fall yearlings that can be bought for $35 each and fifteen good spring boars for $25 each." The Fitch herd have been noted because of the size and quality which is produced. The animals now offered for sale are right up to the reputation of the herd. Address inquiries to John H. Fitch, Lake City, Iowa.

Farm values all over the West are increasing so rapidly that in no section can it be considered economical to have any uncleared land. Particularly is this true, when, through the use of the Hercules steel stump puller, the stumps may be cleared from an acre of land a day. The Hercules is a money-maker from every point of view. It makes money for the operator; it makes money for the farm owner because it affords him good crop land and puts the farm into a more salable condition. This stump puller is sold on a thirty days' free trial and on a three-year guarantee. A big catalog describing the Hercules sent upon request. Address Hercules Mfg. Co., 141 22d St., Centerville, Iowa. See advertisement on page 32.

On December 3d, during the week of the International show the American Aberdeen Angus Breeders' Association will hold its annual combination sale. The offering consists of fifty-two head of the best Aberdeen Angus cattle from a point of breeding and individuality that has ever been listed for a sale at Chicago. The animals have been selected from the leading herds of the country and over 80 per cent of the offering are represented by the Blackbird, Trojan Erica, Pride and Queen Mother families. There are twenty bulls listed which are of show yard character and fit to put at the head of any herd in the country. The females are a superb lot teeming with the best blood of the breed and many of them have long lists of honors from recent fairs and shows. Anyone in the market for a top notch bull to place at the head of a herd or for a few choice females cannot afford to miss this sale. Everything is guaranteed by the association through its members and contributors who are as follows: R. M. Anderson & Sons, O. V. Battles, Dwight Cutler, W. J. Miller, L. McWhorter & Son, Omer Catterson, Wilson Bros., John S. Goodwin, M. A. Judy, L. E. Fey, F. B. Turnbull, C. D. & E. F. Caldwell, Escher & Ryan, J. D. Rogers, A. C. Binnie, Kansas Agricultural College, Escher & Dalgety and M. D. Himes. A glance at the above names of leading breeders should convince everyone the association is only listing top notchers. Send to Chas. Gray, secretary, Union Stock Yards, Chicago, at once for a catalog and arrange to attend this sale.

Safety and comfort in the farm home are greatly promoted through the use of good ranges and heating stoves. A practical test of the stoves of Kalamazoo make, makes them worthy of consideration on the part of every farmer who is about to buy. The illustration in the advertisement on page 30 shows one style of range and one Radiant base burner heater. A great number of other styles are made. For a big catalog and price list which also gives full details as to the easy terms of payment and delivery with freight charges prepaid, write for catalog 165. Address Kalamazoo Stove Company, Kalamazoo, Mich.

Illustrations in the advertisement of the James carrier on page 21 show the advantage and convenience of using one of these carriers in barns and yards. The James is an up-to-date device which has been so perfected as to have eliminated all heretofore objectionable features in a carrier. As an assistant in cleaning the barn or stable, it is perfect in its labor-saving points. One man may remove the manure from a barn and deposit it away out in a yard without leaving the barn door. Complete information concerning this device may be learned by filling out the coupon in the advertisement and forwarding it to James Mfg. Co., AV98 Cane St., Ft. Atkinson, Wis.

The next term of Jones' National School of Auctioneering will open at the school building in Chicago, December 8th, the Monday following the International Livestock Exposition, and those who enroll for this term will have the advantage of four days' free admission to the greatest livestock show in the world. The Jones school is the oldest established and largest institution of its class in existence, and the scholars who are fortunate enough to take a course there are well on the road to success. The instruction is of the most thorough kind and is given by men who have a practical knowledge of the business gained through years of active experience. No person intending to follow the profession of auctioneering can afford to miss attending the Jones school, as by no other means can so much valuable knowledge be secured. The advertisement appears on page 43 and a handsomely illustrated catalog giving full particulars will be sent upon application to Carey M. Jones, president, 14 North Sacramento Boulevard, Chicago, Ill. Kindly mention this paper when you write.

J. O. Walton, Belle Plaine, Iowa, desires to close out his fall Poland China boars and for this reason has reduced the price to $25 and $30 each. These boars are of good quality, have plenty of size and bone and are well worth the money. He is offering his spring boars at $15 each. These boars are all from sires and dams that passed through the cholera two years ago which makes them come from immune ancestors. See page 46 and write Mr. Walton, kindly mentioning The Homestead.

Zene G. Hadley, Wilmington, Ohio, in furnishing copy for his mule-foot hog advertisement, appearing on page 46 of this issue, writes: "Both the leading show sow and the leading show boar of the mule-foot breed are in my herd. I own Lewis Boy that has been shown thirty-four times and has won first thirty-two times. I also own the sow, Daisy Queen, that has been shown thirty-eight times and has been thirty-two times winner of first. Twice she was defeated by a sow in my own herd, and neither Lewis Boy nor Daisy Queen have ever been defeated for championship at a state fair. At the Forest City Fair at Cleveland, one of the largest shows of mule-foot hogs that has ever been held, my herd took all firsts but two, and all championships."

Accurate statements and no misrepresentations of any nature are necessary to an advertisement before we will accept it for our columns. So we, therefore, feel free to earnestly advise our readers, when interested in any of the articles advertised in our paper, to write direct to the manufacturers for catalogs and full particulars, even though the goods are sold through the local dealer. The manufacturer of a product can naturally answer your questions much better than his local dealer, and if you do not know the name of the dealer handling the particular article, the manufacturer is, of course, only too glad to direct you to him. It pays best in the long run to thoroughly investigate a product before you buy it, and you should get the catalogs issued by the various manufacturers making the product in which you are interested. A brand new catalog of "Pittsburgh Perfect" fencing, issued by the Pittsburgh Steel Company, Pittsburgh, Pa., has just come to our desk, and we note it contains much valuable information to all fence users, including some simple wire tests by which you can conclusively prove to yourself the value of any wire before you buy it. The company will send a free copy to anyone writing for it, if they mention this paper. See page 25.

Nyrup Offers Boars at $20.

Those of our readers who have not as yet purchased their Poland China boars can get a good one from John C. Nyrup, Harlan, Iowa, at $20 and $25. Write him at once and mention The Homestead. See advertisement on page 46.

George Everts Immune Duroc Boars.

Our old friend, Geo. C. Everts, Audubon, Iowa, is offering a great line of Duroc Jersey fall and spring boars for sale and they are cholera proof and immune. He wants to close these out and will make special prices for the next thirty days.

Porter's Poland China Boars.

C. H. Porter, Eagle Grove, Iowa, writes us that his boars are coming along in fine shape and he has a few very choice ones left. All cholera immune, and they are going at prices that are satisfactory to every one of their patrons. Write Mr. Porter about these boars and mention The Homestead

Saunders' Omaha Sale.

We desire to say to Short-horn breeders that C. A. Saunders, Manilla, Iowa, has enough cattle for his South Omaha sale on December 16th. He writes us to say that he has some splendid consignments, both in the way of bulls and cows and heifers. Write him a postal and inscribe your name on the same and have him send you a catalog when it is out. Mention The Homestead when writing him.

Oak Lawn Duroc Jerseys.

In an advertisement on page 45 W. J. Hartung notifies our readers that he has for sale a fine lot of Duroc Jersey boars. Writing under recent date, Mr. Hartung says, "I have twenty large, growthy spring boars that carry the best blood line known to the breed. They have good length, big bone, and although in only fair flesh will weigh around 200 pounds each. I can truthfully say that these are the best boars I have ever had and a better lot it would be hard to find anywhere. The gilts that I am offering to the trade are equally as good as the boars and will weigh from 175 to 200 pounds each. I am quoting from $20 to $30 on these pigs according to size and quality." The Hartung herd has always produced strictly good pigs and he has sold them at prices which gave the buyers the advantage. Correspondence is solicited and a square deal guaranteed to all. Send orders to W. J. Hartung, Maxwell, Iowa.

Some Great Poland China Bargains.

If any of our readers want some good bargains in Poland China gilts they should read the advertisement of A. W. Joy, Herman, Neb., on page 47. He offers twenty-one head of gilts that will average 325 pounds and will sell them open or bred at $40 to $50. Also ten choice brood sows at $50 to $75 and five head of spring boars at $30 each. These are all immune. Write him at once and mention The Homestead.

Kading's Berkshires.

A. A. Kading, Fenton, Iowa, is advertising twenty-five Berkshire boars for sale on page 40. These boars have been immuned and are weighing from 250 to 275 pounds. They are sired by Sunrise Value A. and Fenton's Rival. These boars are extra good boned fellows and are priced at $25 to $35 each. Mr. Kading will be pleased to hear from any of our readers in need of a good Berkshire boar. When writing him kindly mention The Homestead.

Robison Percherons at International.

An attractive display of Percheron horses from the Leslie Farm of A. L. Robison & Sons, Pekin, Ill., will be made at the International show at Chicago the first week in December, and included will be a number of the outstanding things that are cataloged for their sale on December 10th, the Wednesday following the International. Don't overlook this exhibit. In the meantime write A. L. Robison & Sons, Pekin, Ill., for a copy of the catalog of their sale, and watch the columns of this paper for further particulars. Mention The Homestead.

Good Chesters by Good Goods.

T. A. Stevensen, Proprietor of the Grandview Stock Farm, Shannon City, Iowa, and one of the veteran Chester White breeders of the West, writes concerning his stock as follows, "Good Goods 21423 by Fancy Goods has this season produced for me the best class of Chester Whites that I have ever bred on my farm in the twenty-five years I have been in the business. My herd have never been in better health and I guarantee every pig I send out to be all O. K. in every way. I have males and females that are good enough to go into the best herd in the United States I have spring pigs that will weigh from 175 to 200 pounds. I have also a fine six-year-old English Shire stallion for sale. He is a good one and has never been beaten in the show ring. I will sell him at a very low price or will take in exchange a choice two year old or three year old of the same breed. My Angus cattle are in fine shape and I have some early bull calves that I will sell at an even $100 if taken within the next thirty days." Mr. Stevenson's new advertisement will be found on page 44. Write him at the address above named.

Huger's Duroc Boars.

In a recent letter from A. F. Hager, Avoca, Iowa, he has the following to say about those good Duroc Jersey boars he is offering for sale. "I have a nice bunch of boars on hand and they are doing fine. These are sired by my noted breeding boar, A. F.'s Pilot Wonder and Model Gano. Just on that I am now making special prices on these boars in order to close them out, and I will be pleased to have intending purchasers call and see them or write me at once." Mention The Homestead when writing Mr. Hager.

Cusha Netherland Twisk.

The engraving of the Holstein cow, Cusha Netherland Twisk which appears on page 16 is an excellent presentation of that cow. She is now owned by Elliott Bros., Woodward, Iowa. These gentlemen purchased her at a public sale at Waterloo, paying the top price of the sale for her, and with all that, it is a common expression that she was the cheapest animal in the sale. She has a one-year record of 720 pounds of butter from 17,780 pounds of milk. This picture was taken shortly after the completion of the year's record.

Kent's Chester Whites.

On page 40 of this week's issue Thos. F. Kent, Walnut, Iowa, one of the most noted breeders of prize-winning Chester Whites, makes a change of his advertisement and he offers anything you want from a prize-winning boar and sow down to fall pigs. The Kent herd won nearly 400 ribbons in 1912 and 1913, so you may know he has a herd that must be recognized. These winning were made at the leading state fairs in the West, viz: Iowa, Nebraska, Kansas, Missouri, Illinois, Minnesota and other western states. If you want anything in the Chester White line Thos. F. Kent can fill your order. When writing him kindly mention this paper.

Hampshire Boars For Sale.

Howard Niswander, Kinross, Iowa, has a few extra good spring boars sired by Messenger Boy, Dude and other prize-winning boars that he is pricing worth the the money. The breeding is as good as can be found in the herd books and Mr. Niswander has taken good care of these pigs and they are sure to please anyone wanting a really good Hampshire boar. Mr. Niswander is also offering for sale his herd boar, Maurer King 7299, junior champion at the Ohio, Indiana and Kentucky State Fairs, 1911. This boar is a sure breeder and is right in every particular. If interested see page 46 and write Mr. Niswander mentioning The Homestead.

Sage's Shire Horse Sale.

One of the more important events to those who are interested in Shire horses is the public sale of J. A. Sage, advertised on page 41 of this paper Mr. Sage is a horseman from the ground up. He knows good horses, he knows how to raise them with just a very few exceptions. The entire sale consignment were raised on the Sage farm and are all descendants from the first or second generations from one Shire mare which was purchased as the foundation material. It goes without saying that this mare was a good one and it is to her credit as a breeder that in eight years so large a collection of her descendants should be kept together and have such impressive Shire character. There is little doubt that no sale of the season will contain as large a number of typical Shire horses as does this one. Some support of this statement is given by the fact that in four years' exhibition at the Iowa State Fair the Sage horses have captured forty-four prizes, a fair share of them being first and second ribbons. There will be eleven brood mares which have been bred to Brown Prince 12326. Five other mares are under breeding age. The six stallions are good ones, Brown Prince, above referred to leading the lot. The others are two year olds, yearlings and colts. Every one is sound. For details or pedigree and individual descriptions write for catalog addressing J. A. Sage, Ankeny, Iowa.

Walker & Son Still Offer a Few Choice Boars.

A few very choice boars, probably as good as raised on their farms this season are now for sale by Thos. F. Walker & Son, Alexandria, Neb. These gentlemen, more than 90 per cent of the breeders of pure-bred hogs, have worked for years and years to perfect a type of easy feeding, big hogs. They have succeeded in no uncertain manner, and the product of their quarter century of effort is now at the disposal of Homestead readers. It is an opportunity that the writer believes will be only partly appreciated by Homestead readers. Most stockmen fail to realize the value of this kind of stock, as compared with the average pure bred. Hogs or anything else that has been bred for a given time with one purpose in view will in turn produce that type with greater certainty than will hogs from herds where they have pursued no policy, but simply mated pure-bred boars to pure-bred sows. Such men are not breeders, they are simply mixers. Walker & Son are Poland China breeders in the real sense of the word. Their boars and sows breed on. These men bred Combination, only one of hundreds of good ones to be sure, and he in turn sired Blue Valley, first-prize boar at Nebraska State Fair and one of the best sired, as well as one of the best individuals in northern Iowa. He was owned by John Schmieder, Remson. Other boars have done equally well, because they could not well do otherwise. They were bred to do well. A few boars

NEXT WEEK'S SALE PROGRAM

Tuesday, November 25 { Short-horns, J. W. McDermott, Kahoka, Mo

Wednesday, November 26 { Duroc Jerseys, W. M. Sells, Indianola, Iowa.

weighing around 300 pounds are still for sale. We want Homestead readers to buy them, they are worth more than the prices asked. Mention The Homestead and address as above at once. See advertisement on page 47.

Keep's Reduced Boar Prices.

With this week's issue Wm. Keep, Atlantic, Iowa, makes reduced prices on his Poland China boars on page 47. In writing us he says: "Just say to Homestead readers that I am offering the best bunch of boars I have ever had at $20 and $25 in order to close them out and make room for fall pigs. I never offered such good boars for as little money before. These will weigh from 160 to 200 pounds, guaranteed breeders and free from disease. They are sired by Big Lad, King Tom and a son of Big Orange. These are out of sows sired by Long King, Big Buddie, Smooth Wonder 2d and Big Orange. Now let's see if they will buy boars. Just say to them that the first that come will be the first served." Mention The Homestead when writing Mr. Keep.

Poland China Boars—$20 and $25.

On page 47 A. W. Stewart, Harlan, Iowa, is offering fifty head of fall and spring boars for sale at $20 to $40. He wants to close them out and he is pulling the price down where they will sell. The fall boars are all sired by a son of Blue Valley Exception and Big Victor, and the spring boars are sired by Mammoth Prospect and Panama Chief. This boar, Mammoth Prospect, is one of the best boars in western Iowa. He is a son of Hadley Prospect and he is out of Long Molly Perfection 2d, bred by John Meller. He is a 1,000-pound boar in condition and has a wonderfully big bone. Mr. Stewart recently secured the well-known boar B Wonder to help him out. Just now he wants to close these boars out, and his prices are away down. Write him at once and mention The Homestead.

Scarff Offers Chester White Boars.

J. T. Scarff, Salem, Iowa, an old reliable breeder of Ohio Improved Chester White swine, is offering for sale boars weighing from 200 to 250 pounds in nice breeding condition. They are largely sired by Michigan Chief, an 800-pound show boar that has never been defeated. These pigs have extra good bone and length and will be sold at $30 each if taken soon. Among them are some extra good growthy fellows that are suitable for herd-heading purposes. Mr. Scarff guarantees everything to be exactly as represented and to show that he knows he has the goods he will ship his hogs anywhere on approval. This is an absolute and fair proposition for the buyers and you will find Mr. Scarff standing back of all his business transactions. See page 40 and when writing him kindly mention The Homestead.

Myers Offers Short-horn Bulls.

M. W. Myers, Beaman, Iowa, has one of the good herds of Scotch bred Short-horns and at the present time has a few extra good Scotch bulls that he is pricing below their value. They are sired by King Banff 3d, a grandson of Imp. Lord Banff, and they are of the Marr Flora and Brampton Leaf families. King Banff 3d, the sire of these bulls, was out of Imp. Fairy Violet by Master Archer. These bulls are big, strong, vigorous fellows and in excellent breeding condition. Mr. Myers has a herd of Scotch cows that are far above the average. They are of the Dorothy, Milkmaid, Flora, Brampton Leaf and Dalmeny Princess families. Mr. Myers expects to hold a Short-horn sale June 9th and at that time will sell a really high-class lot of breeding cattle. If interested in a good Scotch Short-horn bull write Mr. Myers, mentioning The Homestead. See page 43.

Wilkinson Shire and Percheron Importations.

The horse importing firm of R. Wilkinson & Sons has been making rapid advancement during the last few years and now ranks right up with the best of them. Only last week the firm received its last importation of high-class Shires and Percherons, both stallions and mares. They are a splendid lot having size, bone, quality and with action and style that puts them right in the front rank of desirable and useful draft horses. Some of them belong to the show yard division and have proven themselves the winners of ribbons in both France and England. The firm also have a number of home-bred animals that have to their credit splendid winnings at American shows. H. P. Wilkinson, who selected the importation in person, believes that his consignment has no equal in any lot or any numbers brought over this year or is yet to come over. He knows a horse and his selection can be depended upon by those who are in search of true draft horses, with style and massiveness of build. The imported animals are getting along splendidly and are even now ready for the inspection of buyers. The Messrs. Wilkinson are making the strong feature of their business to eliminate a great many of the costs which most importers find it impossible to get around. They buy direct from producers without the intervention of agents or others who ordinarily claim a commission. By securing low prices and by doing their own selling direct to purchasers, they are enabled to eliminate many of the high prices that have heretofore been considered necessary in the purchase of the best sort of horses. They want to show all these animals to every prospective buyer. They want the opportunity to convince buyers of their ability to offer bargains heretofore unheard of. They believe they can do it. Their location is one which makes them easily accessible from almost any point. They are located only seventeen miles east of Des Moines, and there are hourly cars right from Des Moines over the Interurban as well as the regular trains over the main line of the Rock Island road. They invite correspondence as well as inspection. Write or call on R. Wilkinson & Sons, Mitchellville, Iowa. See the big advertisement on page 42.

Nobis Offers Duroc Boars and Gilts.

Chas. W. Nobis, Hanover, Ill., is advertising a choice lot of large, well-grown, heavy-boned boars and gilts sired by boars of noted breeding. They are largely sired by Audubon Col., by C. & E.'s Prince of Cols. and they are out of sows sired by Crimson I Am, Long Chief D., Attraction and R. H.'s Prince. These boars Mr. Nobis is offering will please and are priced worth the money. He also has a fine lot of gilts of the same breeding for sale. He is breeding these to Lucy's Wonder Col. (a half brother to the noted prize-winning Disturber) and will sell them safe in pig at prices that should move them. Mr. Nobis has been breeding Durocs for some time and he has the goods that will satisfy buyers. If interested in a good boar or gilt write for prices mentioning The Homestead. The advertisement appears on page 40.

Irvinedale Farm Belgians.

Chas. Irvine importer and breeder of Belgian horses advises us that he has had excellent trade up to the present time and that he still has on hand a number of Belgian and Percheron horses. Mr. Irvine announces that on February 19th he will hold a public sale to include stallions and mares of both breeds. A portion of the consignment will be animals imported especially for the sale. Among Mr. Irvine's recent sales is that of Robert II De Rum, which will be remembered as having been a prominent International and Iowa State Fair winner for several consecutive years. This horse went to a Minnesota buyer at a good price and he is certain there to make as good a reputation as he did at home as being one of the best stallions of the breed ever brought into the community. Those in search of good animals of either breed will do well to write or call on Chas. Irvine, Ankeny, Iowa. See advertisement on page 41.

Calkin's Immune Duroc Boars.

In a recent letter from E. A. Calkins, Ruthven, Iowa, he says: "I have been selling boars through my Homestead advertisement and have been selling a few at home. I have also had a few inquiries for gilts. You may tell The Homestead readers if you will, that I am saving my sows and gilts for my winter sale. My boars are doing fine and all of my customers are well pleased with them, one asked me if I didn't think I was selling them too cheap, another who had been to the Minnesota State Fair and looked from northern Iowa to the southeastern part of the state bought a Prince the Col. pig and is well pleased. He wanted a long, smooth, heavy-boned pig, one of the big ones with quality. Prince the Col. is making good as a sire, just watch him. I have three Prince the Col. pigs left, one out of a Chief's Col. dam is a show prospect, also have two half brothers to Prince the Col. and one or two others good enough to go in any herd." Mr. Calkins has a few very choice boars left, and as everything is immune it will be a good place ot buy a pig. Write him at once and mention The Homestead.

Westrope's Scotch Bulls.

On page 43 of this week's Homestead will be found the advertisement of J. G. Westrope, Harlan, Iowa, who is now offering fifteen head of splendid young Short-horn bulls for sale. It is seldom indeed that you will see as many good young bulls on one farm as he is now offering. Twelve of these bulls are straight Scotch and are mostly sired by his great breeding bull, Royal Rex 3d. This is the bull that has been siring all his show stuff and his get has commanded the attention and admiration of the best judges of cattle here in the West. Among the Scotch bulls will be found Rosebud, Princess Royal, Orange Blossom, Dainty Dame, Lady Fragrant, Victoria, Lady of the Boyne, and other good Scotch tribes. Some of these bulls are outstanding and are fit to head any herd in this country. One of the best bulls he has ever offered from this farm is that great two-year-old bull, Scottish Rex 370101. This bull is just two years old, and is a son of Royal Rex 3d. His dam is Carrie Esther 3d, by the Thompson-bred bull, Royal Prince 7th, then comes the great Forbes-bred bull, Baron Golddust, then chief Mason and Imp. Red Emperor. He belongs to the Campbell Rosebud tribe, and he certainly is a good one. He is a nice red in color, has a most excellent head and horn, masculine in character with a short neck set on a nice smooth shoulder, a good back, with excellent width over the crops and loin, a splendid quarter and well filled in the twist. He is just such a bull as any breeder would be proud to have at the head of his herd. We will say this that you will travel a long way before you will find another bull as good. It will pay any breeder who is looking for an outstanding herd bull to go and see this one. His thickness, nearness to the ground and great fleshing qualities make him one of the most desirable herd bull propositions that will be found in the West. Then he has two other red bulls, that are of the outstanding kind. One of these is Pine Valley Rex and the other is Royal Rex 5th. The former is a Lady Fragrant and was first prize and reserve champion at the Shelby county fair. He is just fourteen months and he is a good one. Royal Rex 5th is also a wonderfully good bull and a wonderfully well-mated bull. He belongs to that noted Princess Royal family, and either one of these will make outstanding herd bulls. Among the other good bulls is a Dainty Dame, and Orange Blossom, a

SELLS' GREAT SALE
DUROC JERSEYS

ALL VACCINATED AND IN THE PINK OF CONDITION

80 HEAD | 30 BOARS, 50 SOWS | 80 HEAD

INDIANOLA, IOWA
WEDNESDAY, NOVEMBER 26,'13

I AM moving away from Indianola and will sell all my **best boars and sows.** Among the boars I will offer are sons of **Crimson Wonder Again, L. E.'s Col., Model Chief VIII.** and other noted sires. E.'s Col.,** out of **Crimson Golden Rod,** a daughter of my **famous brood sow, H. A.'s Queen.** I am selling a daughter of **Crimson Wonder Again** and out of **H. A.'s Queen,** and **20 fall sows** sired by **L. E.'s Col.** Also a **splendid Crimson Wonder yearling.** Others by **Harding's King of Cols., Col. Gano, I Am A Crimson Wonder II.,** and other great boars. **Also some choice sows with litters at side.** If you want Durocs here is the greatest opportunity of the year. Cols. Kraschel, Allen and Putnam, auctioneers. M. T. White, field man for The Homestead. Send for catalog and mention The Homestead. Address

W. M. SELLS, INDIANOLA, IOWA

Lancaster and a Lady of the Boyne. He also has a good three-year-old Cruickshank Victoria bull that he is offering for sale. If you want a good Short-horn bull it will pay you to go and see the Westrope bulls. When writing him kindly mention The Homestead.

Rouselle & Son Offer Choice Stallions.

We just want to mention that Jos. Rouselle & Son, Seward, Neb., have for sale right now some of the choicest horses in the West and they want to sell them quickly. They have sold some and have immensely pleased buyers. Men come from Illinois and Iowa to buy from Mr. Rouselle, because they are convinced that they get better values for the money than they could get nearer home. Natives of the old country, these gentlemen are able to get a chance at the good ones. Many American buyers cannot even buy horses they would like, for the dealers have options on many of them, but Rouselle & Son being able to speak the languages are able to locate many, and to get first chance at many horses that others cannot get. This is an item worth considering. These gentlemen have about a half dozen horses that they had thought of holding for their spring trade, but as they have already had good sales, they have decided to close out the remainder as soon as possible. Their prices will interest you. Write them and mention The Homestead.

Sharps' Hampshires.

Mike Sharp & Sons, Coal Valley, Ill., are among the leading breeders of Hampshire swine and Red Polled cattle. This firm has in years past won the lion's share of the important prizes offered for Hampshires at the leading state fairs. Few men are as good judges of Hampshires as is Mike Sharp. At the present time this firm has some bred sows of show-yard character and a few boars of herd-heading sort. They also have 130 of the best fall pigs they have ever had on the farm. These pigs are sired by Cherokee Lad, Palo Boy and Ikey Boy. Cherokee Lad is the best boar that Mike Sharp has ever owned with the possible exception of Solid Gold. Some might conceive the idea that Cherokee Lad had some fault when Mr. Sharp offered to sell this boar, but we want to say that Mr. Sharp will always price anything that he owns in the line of livestock. It was not for any fault, but it was because Mr. Sharp considered this boar worth $1,500 and thought possibly someone would be willing to pay the value of a really good boar. This firm will also sell a few Red Polled bulls and heifers of February, 1913, calving. Our readers need not be afraid to send this firm their orders as they are strictly reliable and ship out the very best on mail orders. They can sell fall pigs in pairs or trios, no akin, herd boars or bred sows and will be pleased to hear from any of our readers. See page 46 and write them mentioning The Homestead.

Binnie Angus at the International.

A. C. Binnie, of Alta, Iowa, will make a showing at the International which will prove interesting alike to breeders and exhibitors of Aberdeen Angus cattle. Mr. Binnie is putting forward at this show Kemp, a calf which has made a remarkable record at the state fairs this year. Beginning in Des Moines, he took second place, but the following week at the Nebraska State Fair he headed his class and was given junior championship, an honor which he carried away from five state fairs. This calf is by Kloman, the Binnie herd bull that has established a reputation as a breeder, which Mr. Binnie believes entitles him to premier position among herd bulls of the country. This calf will be offered for sale at the Chicago sale. Some liberal offers have been be n made for him at private sale, but Mr. Binnie prefers to put him through the sale ring, believing that appreciative breeders will recognize his full value. Kemp is no accident. He is a half-brother of Eramon, a calf by the same sire, which last year won junior championship at five big state fairs and then went to Texas where he added to his fame by taking first and grand championship.

North & Robinson's Horses.

One of the greatest horse-breeding establishments in Nebraska or in fact in the middle West is owned by North & Robinson, of Grand Island. These gentlemen have grown up in the horse business, have learned every phase of the business and are certainly prepared to furnish Homestead readers with high-class stock. They have this season imported a lot of good stock, and they have raised a fine lot of stock on these different farms. They have a splendid breeding farm at Cairo, Neb., and they at all times keep a high-class lot of stock there. They maintain a grand stud of registered mares at the farm at Bridgeport, Neb., and the very best stallions that they can find are in service there. It is a significant fact that the highest priced horses in their last winter's sale were horses that were produced in this country. There is no reason in the world why these gentlemen cannot produce just as good horses here as elsewhere. Climate favors them, and abundant pastures and the best alfalfa hay of a continent are at their disposal. Good breeding stock with such advantages is sure to produce well, and it does. These gentlemen ordinarily ask less money for these home-bred horses than they do for the imported ones, but when it comes to auction where the public sets the price, their home-bred horses sell with the best. We would ask Homestead readers that are interested in

LESLIE FARM PERCHERON SALE

PEKIN, ILLINOIS, WEDNESDAY, DEC. 10, '13

40 HEAD: 20 IMPORTED MARES, 6 STUD COLTS

PERCHERON MARES IN THE PASTURE AT LESLIE FARM.

WE WILL offer to the public the very best lot of Percherons to be sold anywhere this year. We are cataloging more good individuals than have ever before been submitted at Leslie Farm, and we know that the public will not be disappointed in them. The twenty imported mares include some of the best things that have ever left France, many of them good enough to win in the American show rings in the face of the hottest competition. Included are several of the get of Moulinet, the champion horse of France, now at the head of Leslie Farm stud. The imported mares are yearlings to 5 years old. Eight of them were bred in France and the balance, together with the 14 outstanding American-bred mares in the offering, are bred to Moulinet, his son Kauris, Jayet or Rabelais. There are six stud colts in the offering, the get of Moulinet and Rabelais, that will suit the most critical buyer. More Seducteur blood is listed for this event than has ever before been offered at one time. Attend this sale if you are in the market for Percheron mares of the highest quality and strongest breeding. Percheron breeding has been carried on at Leslie Farm for a third of a century, and this is the best lot of horses that we have ever presented to the public. The handsomely illustrated catalog tells the story. Write for it today, mentioning The Homestead, to

A. L. ROBISON & SONS - - - PEKIN, ILLINOIS

Cols. Carey M. Jones and Fred Reppert, Auctioneers. Attention is called to the Percheron sale of W. S. Corsa at Whitehall, Ill., Tuesday, Dec. 9. Good train facilities from that sale to Leslie Farm.

some good horses to make a trip to Grand Island, visit the farm at Cairo which is only a few miles distant and see for yourself this great plant. The good horses are there and will be priced worth the money. These gentlemen are the kind that is a pleasure to do business with and will give you good values. If writing, kindly mention The Homestead.

Blank Bros. & Kleen's Short-horn Sale.

Every season at about this time of year, Blank Bros. & Kleen, Franklin, Neb., offer a choice lot of Short-horn cattle, and the sale this season will be held Dec. 10th. On this date these gentlemen will offer one of the best offerings that they have ever put up. They raise these cattle on their different farms and this sale stock represents the major part of their surplus each season. They are certainly good stockmen, and have done a great work for Franklin and vicinity to say nothing of the good their cattle have done in other parts of the central West. They are good men to know, as they have grown up with the pure-bred cattle and hog business and at the same time they have grown up with Nebraska. They came to the country in an early day, they have by honest toil and clean living, earned a big lot of Franklin county land. They have kept their farms in good condition, and improved their herds from year to year. The writer is familiar with the herds and flocks owned by these men and it is a pleasure to see them striving and winning in this effort to produce the better things. It is also a pleasure to see their well-kept farms, run on a practical basis, for these gentlemen have had naught given them, and they husband well their resources. Were the writer buying breeding stock we would much rather buy from such herds than to buy from those that maintain their stock farms as playthings, and for whom it matters but little whether or not the livestock is a paying proposition. These gentlemen make their livestock operations pay. If this sort of stock will make dividends for them, it is safe to assert that the same stock in other hands, and with as good care will do as well. In the forthcoming sale, they will offer some forty head of young cattle. Nothing over five or six years of age will be offered and the greater part will be under two years. Animals of the best Scotch breeding will be included, but the mapor part of the offering will be of American sorts. The great breeding bulls, Missie's Sultan, Imp. Strowan Star and Lowland Marshall will be the sires of the greater part of the offering. There are good cattle in this sale, and we would like for Homestead readers to apply for the catalog without delay. Be sure and mention The Homestead when you write, and be sure and write at once. A postal will do, but send your name today before you forget it. Address Blank Bros. & Kleen, Franklin, Neb.

Slepickas' O. I. C.s.

With this issue of The Homestead, J. V. Slepicka & Sons, Wilber, Neb., are sending in a copy for their advertisement that appears elsewhere in this paper. These gentlemen are now prepared to offer The Homestead readers some extra choice immune O. I. C. boars and all of the very best breeding. This herd is really one of the very good ones of the state, in fact of the whole country. These blood lines are of the very best and these gentlemen are good stockmen, hence they are constantly improving their herds. They made the most sensational winnings at the fair a year ago of any herd shown in the state. They won first on junior yearling boar, 2d on senior boar pig, 1st, 2d and 3d on junior boar pigs, 1st on senior year sow, 3d on junior year sow and 1st and 2d on junior sow pigs. This was the best record of any exhibitor and shows very conclusively that these gentlemen have the goods. The boars now for sale are by Wilber O. K. and Grandview Choice. These are both boars of exceptional merit and worthy the place at the head of this good herd. Write for the prices on the good boars for sale and mention The Homestead when you write. See advertisement on page 40.

American Galloway Breeders' Sale.

In the sale of Galloway cattle at Chicago, on December 2d, during the International Livestock Show, one of the choicest lots of cattle ever listed for sale by the American Galloway Breeders' Association will be sold. While the offering is not large, there is a variation in breeding that is unusually attractive. It will be noted that the three imported bulls consigned by Mr. C. S. Hechtner—listed as Lots 1, 2 and 3—represent a different line of breeding from anything heretofore offered at public auction in America. These three bulls, as well as a number of others, have received high ratings in this year's shows, while the pedigrees of all reveal the most popular strains in Galloway breeding. The female offering also merits attention. It consists mostly of heifers and young cows, a number of which have calves at foot. These cows and heifers present the same richness of breeding as the bulls, and it will be found that most of them have been consigned from the best show herds of the season. Briefly described, this is an offering of choice cattle. To the rangeman of the West, as well as to the stockman and farmer of the corn belt, there is offered a variety of type and breeding from which each can select his individual needs. We are entering upon a new era in beef production, and here is an opportunity to start a new herd or to infuse new blood into the old. Here is also an opportunity to strengthen the show herd for next year. The usefulness of the animals as breeders is guaranteed. The following breeders contribute the cattle: C. S. Hechtner, three bulls and three females; S. M. Croft & Sons, five bulls and five females; James Frantz & Sons, two females; R. W. Brown, three bulls and five females; total twenty-six head—eleven bulls and fifteen females. For catalogs address R. W. Brown, secretary, Carrollton, Mo.

Hemenway's Hereford Sale.

W. E. Hemenway & Son will make a public sale offering of Hereford cattle at Steward, Ill., Monday, December 8th, following the International show, and for that event they have cataloged some very desirable things. The senior member of the firm has been a breeder of Herefords for over thirty years, and during that time has left his impression upon the breed by the production of good cattle. Many great bulls have found a home at the Grove farm, beginning with Chancellor by Horace, followed in turn by Shadeland Earl by Earl of Shadeland 22d, McKinley by Lorimer, Orpheus 4th by Wild Tom, Masquerader by Lamplighter, and in the judgment of the writer one of the greatest bulls that the breed has ever produced, and then Prime Star Grove, the present herd bull. In the coming sale the cattle are all the get of Masquerader or Prime Star Grove, with exception of four young cows by Ben Bolt, a grandson of Lamplighter. Twenty-four females are listed, including three daughters of Masquerader, Mercedes, five years old, Victorine and Cora 2d all bred to Prime Star Grove, and forming a trio of breeding matrons that would grace any herd. There are twenty yearling and two-year-old heifers in this sale, sixteen of them by Prime Star Grove and four by Ben Bolt, that will stand inspection sale day. In addition there are ten bulls, consisting of Prime Star Grove and nine of his sons. Mr. Hemenway has so much of the get of his herd bull that he is compelled to let him go. Prime Star Grove is a combination Anxiety, Grove 3d and Lord Wilton blood that is hard to beat, and at nine years of age, with the form and activity of a four year old, is doing excellent service in the herd. Some breeders needing the strongest kind of a herd sire should secure this bull. Among the young bulls are some very attractive things, notably Valentine, a junior calf of outstanding merit, and Bellmyer, an August yearling that will satisfy. During Mr. Hemenway's long connection with the Hereford industry he has been instrumental in building up a great many herds, particularly in northern Illinois, and has acquired a reputation for honest methods that is well deserved. Nine head of horses, including three registered Clydesdales, a stallion and two mares will also be offered on sale day. The advertisement of this sale appears on page 43. Look it up and write today for a copy of the catalog to W. F. Hemenway & Son, Steward, Ill., mentioning The Homestead when you write.

McDermott's Short-horn Sale.

Our readers interested in Short-horn cattle should not overlook the sale J. W. McDermott, Kahoka, Mo., will hold on next Tuesday, November 25th. Ten bulls and forty females sell and the breeder looking for choice stock to add to his herd will find this an excellene opportunity. It is an offering of practically all Scotch cattle representing as good sires as are found. Fair Goods by Choice Goods and out of the celebrated Ruberta, his son, Good Count, Avondale, Villager, Whitehall Rosedale, Elmdorf Marshal and other noted bulls are represented in the offering. The sale will be held on the fair grounds at Kahoka and Mr. McDermott would be glad to have you come. Stop at the Huston hotel as his guest.

Sells' Duroc Sale.

What will be the last sale of the year will be that of W. M. Sells, Indianola, Iowa on November 26th. When he will sell eighty head of Duroc Jersey boars and sows. Everything he sells will be vaccinated and are therefore immune. Mr. Sells concluded that breeders wanted them vaccinated and therefore had it done. He never had a case of hog cholera, nor swine plague on his farm, but he realizes that others want them vaccinated and he had it done. So much for the immunizing, now about the offering and why he is selling. He intends to move to Sidney, Iowa, and he concluded he would sell about all he had and therefore the eighty head he has listed for his sale. He is cataloging thirty head of boars in this sale and some of these are of the outstanding kind—good enough to go to the head of our best herds. As this will be the last good sale of the year it behooves you to get your boars and this will be an excellent place to buy them In recent letter from Will Sells he says, "I have had quite a few breeders at my place since you were here and they say these are the best thirty boars they have seen listed for a sale this fall, so you can say to those breeders who are still wanting a good boar to come to my sale or be represented with a good bid." He is selling sows of the grand champion boar, Crimson Wonder Again and also a few daughters of his. Then you will find some excellent boars in this sale that are sired by L. E.'s Col. and there are some of these that are outstanding. Several of these our best breeders can well afford to look after. Mr. Sells is listing some of the best sows he has ever sold in a sale for this great occasion. Some of these well-known boars, Evergreen Prince, the boar that helped make the reputation of the Grant Linn herd, and others will have litters at side. It will be a most

excellent place to pick up a few immune sows or sows with litters. He is also selling twenty head of fall sows by L. E.'s Col. that are hard to beat. Remember that this is the last sale of the year and we want you to bear in mind that there are some splendid boars and sows in this sale. Write for the Sells catalog at once and kindly mention The Homestead. Bids sent to our M. T. White, in care of Mr. Sells will be looked after on day of sale. See page 38.

Broughton's Big-Type Boars.

On page 46 Ben Broughton, Lake View, Iowa, begins an advertisement for his big-type Poland China boars that he is now offering for sale. He writes us as follows about them: "In regard to the boars that I am offering will say that they are the best lot of boars that I have ever offered for their age, they have the length, frame, bone, size and quality, everything except fat and the reason they do not have a great deal of that is that I have had to buy corn all summer, and then the disease was so thick I thought it best not to push them too hard, these boars received the double immuning treatment about two months ago and have since been exposed to the disease and have not taken it so that I consider them immune. If you notice the breeding in the advertisement you will see that they are strictly big type, but I have always been a stickler for quality along with the size so that these pigs are smooth and fine looking, they were farrowed in April and will weigh in the neighborhood of 200 pounds and are thrifty fellows. Their sire would have made a hog that would have weighed 1,000 pounds easily and their grandsire on the dam side weighed nearly 700 after the breeding season last January. He would have made 900 all right. If parties wanting a pig will describe just what they want I can tell you very quickly whether I have got it or not. Some of these pigs are solid black bodies and some have some white spots. Write me your wants." When writing Mr. Broughton about these boars kindly mention The Homestead.

The International Hereford Sale.

The International Hereford sale to be held at Chicago, on Friday, December 5th, will afford a rare opportunity to admirers of Herefords to purchase as high-class a lot of cattle as were ever offered at public auction. It would be difficult to write better pedigrees than those printed in the catalog for this sale, and the individuals offered are fully as good as the pedigrees indicate. The offering consists of fifty-two head, which number is about equally divided between males and females. To anyone looking for a herd bull, it will afford him a rare opportunity to compare at close range, individuals of various lines of breeding. The bulls that will be offered have been carefully selected, and it would require considerable time, and many miles of travel to see such a collection of bulls as this will be. The female offering consists of a very choice lot of cows and heifers that anyone might be proud to own. C. T. Bailey, Lowell, Ind., will offer five head, two of which are bulls, and three females, all of which are sure to please prospective buyers. Frank Bieth, Joliet, Ill., offers two Polled bulls. These specimens should be a great attraction for admirers of Polled cattle. The veteran breeder, Thomas Clark, Beecher, Ill., offers two grand cows with calves at foot that would look good in any herd. W. A. Dallmeyer, Jefferson City, Mo., will sell two bulls and two heifers. His offering is especially attractive inasmuch as he will sell Grace Premier, the senior yearling heifer that stood third in the American Royal show. The bulls he is offering should not be overlooked. W. J. Davis & Son, Jackson, Miss., offer two bulls by Point Comfort 14th. These two bulls are half brothers to the bull calf that sold in the American Royal sale for $1,975, and will make two excellent herd bulls for someone. S. J. Douthitt, New Castle, Ky., sells two bulls by Sir Donald 12th, and there need be no fear of "going wrong" on either of these. H. J. Fluck, Goodenow, Ill., will sell three females two of them especially strong in the blood of Blackstone and Peerless Wilton. Giltner Bros., Eminence, Ky., offer four head, two bulls and two cows of special value. Thos. Graves, Bunker Hill, Ind., offers a senior yearling bull that someone will be proud to own. J. V. Hill, Roundhead, Ohio, consigns three cows, that will do credit to his herd, and make someone valuable breeding cows. Luce & Moxley, Shelbyville, Ky., will sell two bulls, one by Prince Rupert 8th; the other by Don Perfect. Both of these are very promising young bulls, and their breeding should suit the most discriminating buyer. Louis Oltmanns, Rock Falls, Ill., will sell a senior yearling bull that is the grandson of Dale and Disturber; also a valuable breeding cow, sired by Disturber. Pres. Postle, Belle Center, Ohio, offers a very promising yearling bull by Perfection Fairfax 2d. C. E. Puckett, Warren, Ill., consigns three bulls that are strong in Anxiety blood. J. C. Robinson & Son, Evansville, Wis., consign a two-year-old show bull, Bonnie Lad 28th, and anyone looking for a high-class herd bull should not overlook this bull. They also consign two heifers and a bull calf by Bonnie Brae. Smith & Wilson, Decatur, Ind., will sell two young cows that are especially good individuals and well bred. J. E. Thompson, Martinsville, Ill., will offer a cow by Prime Lad 16th, that is good enough to make a valuable cow in any herd, and a bull by Prince Rupert 8th, that has proven himself a great sire. Also he is offering a two-year-old Britisher bull. J. H. & J. W. VanNatta, LaFayette, Ind., will sell a two-year-old heifer by Polly's Lad, and out of one of their best Roderick cows; a bull by their two-year-old show bull, Diamond Donald, and a heifer by Tippecanoe. Mr. H. N. Vaughan, Stronghurst, Ill., offers a Polled bull of exceptional merit. C. A. Watson, Apple River, Ill., will sell a grand breeding cow by Dandy Right and a heifer and a bull by his noted herd bull, Masquerader. For catlogs address Secy. R. J. Kinzer, 1012 Baltimore Ave., Kansas City, Mo.

Nash's Great Boar, Big Hercules.

The writer called on J. T. R. Nash & Son, Minden, Neb., a few days ago and looked over the Poland Chinas. This is one of Nebraska's best herds. As good a lot of twenty spring boars as we have seen all season we saw here. There were many that would weigh 300 and they are big and long and smooth. They are sired by Gold Medal. The thirty gilts are also mostly by him and they are sure a fine lot. They are mostly from sows by Chief Wonder and they look good. The great boar, Big Hercules, is doing fine. He is just a little the best boar we have seen for some time. Mr. Nash has none of his get, as he purchased this boar last spring, but he is bred to produce well, being sired by one of the best Expansion boars that Willey has bred in several years and his dam is sired by Big Columbus, the sire of Columbus, the 1912 champion boar at Nebraska and also the sire of The Big Orphan, the 1913 champion. This boar, Big Hercules, will be as big as either of these boars, his dam is a wonderfully good sow, and she was also the first prize under six months gilt at the fair three years ago. Mr. Nash will make a winter sale of these good gilts. His date is not yet set, but we just want to say that there will be no better places to buy bred sows this winter. There are others that are probably as good, but none better. Just keep this sale in mind, and watch for further announcemens in The Homestead.

Mousel Bros. Coming Hereford Sale.

An item of special interest to all stockmen but to breeders of Hereford cattle in particular will be the announcement of the forthcoming sale of Hereford cattle that will be made by Mousel Bros., Cambridge, Neb., on January 28th. The date formerly claimed for this sale was December 30-31st but they have decided to move the day up about a month. Those that have kept abreast of the times are familiar with the class of cattle that will be offered by these gentlemen, but to the newer men, and there are many of them, we wish to say that this herd is one of the better herds of a continent. It is a herd that has sent forth cattle that have ranked at the top among all the good ones, and they have produced bulls of the very highest order and that have headed herds of the greatest note, owned by stockmen of ripe judgment. The writer is especially familiar with this breed of cattle and with this herd, and we want to say to our readers that there will be an opportunity on the 28th of next January to get select breeding stock for good herds already well established, and there certainly will be ample opportunity for the new man to get the sort of cattle that he will need. A few daughters and a number of sons of the great Beau Mischief will be included. This bull has been bred to produce, and he does. His ancestry for generation after generation have been the best of their respective families, and the grand culmination is Beau Mischief. There are other good sires represented. The future of the cattle business is bright. The future of the Hereford business is exceptionally promising, and with ordinary success, one will be positively assured of abundant return on the investments made on that date. Parties interested will do well to write early that they may get the catalogs as soon as off the press. Address a postal today, and watch for further announcements in The Homestead.

Gregory Farm Percheron Sale.

The bare announcement that the annual sale of Gregory Farm Percherons will be held at White Hall, Ill., Tuesday, December 9th, should be an all sufficient statement to attract the attention of the draft horse fraternity, as these events, each year are recognized as of outstanding importance. For the coming sale Mr. Corsa is offering some exceedingly attractive things. The list includes thirty-eight mares and fillies and four studs, two imported horses and two colts by the champion Carnot. There are ten head by Carnot, nine fillies and one stud, all with the Gregory Farm quality. Eleven imported mares, all bred and showing safe in foal, are cataloged, and include some of the most attractive matrons that have ever been offered at Gregory Farm. Ten head of yearling fillies, six of them by Carnot, including winners at the International and in the Percheron Futurity show, form a collection that cannot fail to attract attention of buyers sale day. Particulars regarding much of the animals cataloged for this sale will appear next week. Suffice it to say at this time that Mr. Corsa is living up to his established reputation for furnishing a top lot of horses, and the public will be well repaid by being at White Hall December 9th. Each succeeding crop of colts from Carnot but serves to make his reputation as an oustanding sire more permanent and gives further demonstration of the wisdom of Mr. Corsa in placing this horse at the head of his band of mares. In the matter of sons and daughters of Carnot and mares bred to him, the opportunity will be afforded at the coming sale to secure more of his blood than at any previous time, something that should not be overlooked by the buyer. The preliminary announcement of this sale appears on page 41. Look it up and write for a catalog today to W. S. Corsa, White Hall, Ill., mentioning The Homestead. This sale comes the day preceding Robison sale at Leslie Farm, Pekin, Ill., and there will be ample train facilities between the two sales.

Trumans' Sale of Imported Shire Mares.

Forty head of imported Shire mares will be offered at public sale at Trumans' Pioneer Stud Farm, Bushnell, Ill., Thursday, December 11th, the week following the International Livestock Exposition. These mares have all been selected from the leading studs of England, and have back of them the best blood lines known to the breed. No firm or set of men know the English Shire horse like the Trumans. More good Shires are handled each year at the Bushnell establishment than by all other importing firms combined. The best that England produces is yearly secured by them, largely through the efforts of the president of the company, J. H. Truman, who lives at Whittlesea, England, and who is recognized on both sides of the water as the leading authority on the sturdy English drafter. Included in this sale are some outstanding mares that came over late this fall, as well as all of the winners and champions shown by the Pioneer Stud Farm this year at the Iowa, Minnesota, Indiana and Illinois State Fairs, and all of their International winners. The mares run in ages from fillies to mature mares, and nearly all of the latter are bred to the International grand champion, Lockinge Henquist. The Messrs. Truman having been making sales of imported Shire mares since 1882, and they state confidently that at no sale have they ever presented a better lot of mares. Many of these mares will be on exhibition at the International Livestock Exposition at Chicago the first week in December, and the buying public will do well to look them over, as they will stand inspection. They are the Truman kind, which means all that is good in draft horses, and they are all backed up by the Truman guarantee, which is the most liberal and thoroughly reliable in every particular. The catalog tells the story, and is handsomely illustrated. Send for it today to Trumans' Pioneer Stud Farm, Bushnell, Ill., mentioning The Homestead when you write and watch these columns for further particulars.

Chas. H. Murray's O. I. C.'s.

One of the largest herds of O. I. C. swine in Nebraska is owned by Chas. H. Murray, Friend, Neb. Mr. Murray has been breeding good O. I. C.'s for a number of years, and has been keeping his hogs immune and so has suffered practically no loss from disease and therefore has a fine herd of stock to select from. Mr. Murray made the banner bred sow sale of the West last winter, at which time breeders proved their appreciation of the class of stock Mr. Murray puts up. Right now this enterprising stockman is offering a few fall yearling boars, some very choice spring and early summer boars, also some select-bred sows and gilts and a lot of fall pigs of either sex. Those of our readers in need of a boar for a lot of hard use will do well to buy one of these fall boars. Those that will have a little less work will be pleased with an early spring boar, and those that live long distances and wish to get choice breeding stock and at the same time save express as well as first cost will be pleased with the summer boars or the fall pigs. Two new boars have recently been added to the herd. One is a grandson of Combination and the other a grandson of Keep On. These boars are being used on daughters of U. S. and Fairmont Chief. These last two boars are well known over the country and are certainly boars that have done a great work in the Murray herd. Sows of this mating should be mighty good property, and we believe that bred sows will be exceptionally high in February and March, and we would suggest buying as early as possible. The country faces the best hog market that we have in all probability ever known, and early buyers are the ones that will profit by this raise in prices. These fall pigs are choice stock, and if one has limited capital and can wait for them to grow, there is absolutely no way to get a foundation of good stock for as little outlay. Mr. Murray is a good man to do business with, and we recommend his stock. Write at once and mention The Homestead. See advertisement on this page.

Holstein-Friesian cattle, at a recent Michigan public sale, sold at prices ranging from $55 to $790 each, and an average of $234.

Ask your neighbor to subscribe for The Homestead.

TOO LATE TO CLASSIFY.

REGISTERED SHIRES AT AUCTION

SALE AT MY FARM NEAR

ANKENY, IOWA, TUESDAY, DECEMBER 9, 1913

The sale includes 6 stallions and 16 mares, from weanlings up to mature animals. All are recorded. They are a good, clean bunch, mostly of my own breeding, and good enough to go into a show ring and win prizes, which they have done several times at the Iowa State Fair. Eleven of the mares are safe in foal, most of them to Brown Prince 12326, that is also included in the sale. Most of the mares and one two-year-old stallion are sired by Stuntney King Cole III 3676 (10538), one of the best stallions ever in this part of Iowa. The younger ones are mostly sired by Oku 7984 (22654) a large drafty horse weighing 2,270 pounds. Some of these mares would not be priced under any circumstances, but on account of poor health I am compelled to close them out. Sale 6 miles northeast of Ankeny, and 2 miles west of Elkhart, at 1 P. M. sharp. Chas. Howard, auctioneer. For catalogs giving detailed pedigrees and descriptions address

HEISEL'S PERCHERONS

GET in line, be the first to purchase one of those big, drafty, Percheron stallions that arrived in my new importation September 22d.

Sale barns in town, located 180 miles west of Peoria, Ill., 91 miles west of Burlington, 70 miles southeast of Des Moines, 290 miles south of Minneapolis, on M. & St. L. and C. B. & Q., R. R.

E. J. HEISEL - - - - FREMONT, MAHASKA CO., IOWA

OAKLAWN STOCK FARM
Breeds and Imports Percheron, Belgian and Shire Stallions and Mares.

I HAVE a fine collection of big, rugged, heavy-boned Percheron, Belgian and Shire stallions and mares ready for the inspection of buyers. If you want the kind that has been winning at the state fairs, at rock bottom prices, see what I have before you buy. Stallions and mares of all breeds on hand. Write me for any information you may want, mentioning The Homestead.
GEORGE EGGERT NEWTON, IOWA

Imported Belgian Horses

I HAVE on hand a large collection of imported Belgian stallions and mares that have size, heavy bone and quality. Some extra good two and three year-old stallions and a gr and bunch of mares and fillies. Mares are all in foal to imported stallions. All of my prize winners at the recent Iowa State Fair are for sale. I can show buyers more horses for the money than my competitors. Visit or write me your wants mentioning Homestead. Farm ½ mile from town.
R. F. FRENCH - - INDEPENDENCE, BUCHANAN CO., IOWA
Located on the Rock Island and Illinois Central railroads.

HORSES AND JACKS.

WILKINSONS' IMPORTATION

A MAGNIFICENT AGGREGATION OF

SHIRE and PERCHERON STALLIONS and MARES

THE CREAM OF THE OLD COUNTRY

ARE NOW IN OUR BARNS AND READY FOR INSPECTION

OUR importation has just arrived. It is a top notch lot of stallions and mares which we ourselves selected from the best breeding farms of England and France. Some of them have been prize winners, and all of them are good enough for the show ring. They are absolutely the best horses we could find, and no importer can buy better. We want buyers to come and see them and our home-bred stock. Twenty supreme quality, heavy-weight stallions of all ages—prize winners in America and Europe. Twenty-five mares of real draft type, most of them of breeding age and safe in foal to an imported stallion. We beat the world in quality on these horses, and now we are going to beat the world on prices. We can do it. We bought them right. We bought them direct and have no commissions to pay. We have no salesmen to divide with. We give you the benefit of these savings. Come and see the horses and we will prove every word. We are 17 miles east of Des Moines, with trains every hour over the Interurban, or the main line of the Rock Island.

R. WILKINSON & SONS - - - MITCHELLVILLE, IOWA

TRUMANS' SALE OF IMPORTED SHIRE MARES

AT PIONEER STUD FARM BUSHNELL, ILLINOIS,

THURSDAY, DECEMBER 11, 1913

40 HEAD Including all of our SHOW MARES that have won first and championship prizes at the big State Fairs this fall and all of our International Live Stock Exposition prize winners. Yearlings to mature mares, the latter nearly all bred to the International Grand Champion Lockinge Henquist. Our first sale of imported Shire mares was held in 1882, and at no sale since that year have we offered any better lot of mares than will be presented for public appraisal at Bushnell, Ill., Thursday, Dec. 11th, during the week following the International. We will show a lot of these mares at the International, and invite your inspection. Watch for our advertisement in next week's Homestead. Cols. Jones and Keck, Auctioneers. Write for the catalog. Mention The Homestead and address

J. H. COPE - - - - **CARLISLE, IOWA**

$950

Completely equipped f. o. b. Toledo

Overland

$1075

With Gray & Davis electric starter and generator

50,000 cars—Not enough!

FOR from every indication and from orders *on hand* we could *double* our 1914 production—make 100,000 cars and still be behind in orders. We have on file immediate shipping orders for over 10,000 cars. The new Overland has been on the market for less than one month—yet in that short time—in 30 days—we have received orders for one-fifth of our entire 1914 production.

For example: Away up in a very small town in a remote corner of the great northwest, a dealer had contracted for 40 Overlands to be taken during the next twelve months. This is a big order for that section of the country. The publication of our announcement (last month) brought him such an overwhelming batch of cash orders that he came straight to Toledo to literally beg for more cars. He stated that he would take the *entire* shipment of 40 cars *in one month instead of twelve months* as originally contracted for.

On the other hand our dealers in the large centers would take 500 cars apiece *right now* if we could supply them. But 150 a day is the very best we can do at this time. And these 150 per day we are carefully and equally distributing all over the country.

Such selling records have but one meaning. Such a demand must prove to you beyond all doubt that the Overland is the most economical and practical buy on the market.

And why not? Look at the *increased* value and the *decreased* price!

The motor is larger—*but the price is lower.*
The wheelbase is longer—*but the price is lower.*
The tires are larger—*but the price is lower.*
The new car has electric lights throughout—even under the dash—*but the price is lower.*
The body is designed with cowl dash and flush U doors with concealed hinges—*but the price is lower.*
It is magnificently finished in dark Brewster green, trimmed in polished nickel and aluminum, running boards and wheels to match—*but the price is lower.*
Then there are Timken bearings, a jeweled Stewart Speedometer—a larger steering wheel, and deeper upholstery—*but the price is lower.*

Never before such value for such a price!

It is conservative to estimate that on the average the new Overland costs you *30% less* than any other similar car made. And a production of 50,000 cars is the reason.

Get in touch with our dealer. Arrange for an immediate demonstration. October and November are the finest motoring months in the year. If you are thinking of getting a car negotiate today. Make your appointment now.

Handsome 1914 catalogue on request. Please address Dept. 80

Old Farms Made New

An old man can never be made young. A worn-out reaper is fit only for the junk heap. A horse that is past usefulness must be retired.

But an old farm can be made new!

The owner of a hundred-acre farm was beating all his neighbors in crops, yet his business was a fizzle.

It looked as if he'd have to quit the game to make a living. But he told his troubles to a farm-management expert. The expert got busy and made that farm over from pasture to corncrib. He moved fences, started rotations—did just the things an expert replanning a factory would do.

And when he was done the deficit had been turned into a profit.

For several years the Department of Agriculture, through its field agents, has been experimenting with various farms, with the owner's coöperation, along the lines of system and efficiency. We are able to publish the results in a series of four articles, of which this is the first, under the title, *Old Farms Made New*. They tell how to replan a farm for economy in time and labor.

PECANS—A Tree Crop of Tomorrow

A plantation owner set out a sixteen-acre pecan orchard, at a cost of $600. Three years later a friend asked, "What will you take for it?"

"It's not for sale," the owner answered, and $1800, $3000, $4000, wouldn't budge him. Why?

"Because when it is ten years old I can sell it for $16,000—$1000 an acre," he declared. Now it is nine years old and he wouldn't take $16,000, because it will soon be paying twenty per cent on that valuation.

Tree Crops is the next big thing in farming, says Dr. J. Russell Smith, and he understands this subject better than anyone we know. He studied the nut orchards of this country, and some friends of the University of Pennsylvania thought so highly of his work that they sent him on an 18,000-mile trip through Southern Europe and North Africa, where pecans, chestnuts, walnuts, olives, dates and the rest have flourished for centuries.

He returned with a new faith in tree crops. He tells in this series of articles how the nut industry must be reëstablished in America.

Fresh Fowl—or Frozen

Cold storage is a saving grace to the farmer—it prevents glutted markets and equalizes prices the year round.

The poultryman especially will find that the cold-storage plant is his best friend. Here's a story that tells what it means to you as no other article you ever read has told.

A Woman and a Windmill

In the homesteading game on Uncle Sam's free land women win out as well as men; women of pluck and common sense, like this woman who took a windmill along with her when she went out to try to make a home for herself.

"Any woman can do it," she says, "if she will buckle down cheerfully and not try to be a parlor ornament."

This *real* story of a *real* woman is better than fiction.

Out West—The Little Landers

Can a family farm a quarter of an acre and get a living out of it? That's the claim back of Southern California's Little-Lander movement. Ever hear of the little landers? We have investigated them. You may be interested in the result.

These Are a Few of the Big Features You Will Find in One of Our Four December Issues. But They Are Not All

Growing Alfalfa for Market. A hundred dollars an acre in a droughty year looks good to Kansas farmers, and their cornfields are rapidly becoming alfalfa fields. Have you tried alfalfa as a money crop?

When Dairymen Get Together. For a long time the dairymen have been divided into many factions. Dealers and producers have waged continual warfare. Ice cream manufacturers have been misunderstood. Breeders have followed false gods and have maligned each other's breeds. But harmony is coming. The last National Dairy Show was really a peace conference as well as a school for producers, dealers and manufacturers. Our article on the Dairy Show will have a new point of view. It's not merely a list of prize winners, but a foresight into dairy futures.

Progressive Agriculture. A girl made $107 from tomatoes on a tenth of an acre. A boy raised 167 bushels of corn on an acre. Uncle Sam is teaching 92,000 boys and 33,000 girls how to get the most from the farm, and they are teaching their fathers and mothers.

Then there's a great woman's department, with the advance guard of Christmas shopping suggestions and holiday recipes and helpful hints for the "Mainspring of the farm"—the wife and mother. And a dozen more articles dealing with the two important features of the farm business—economy in production; profit in marketing.

COAL Direct From The Mines

Keep Dealer's and Jobber's Profits In YOUR Pocket

DO you know that wherever you live *you* can now buy coal straight from the mines at wholesale prices, the prices your *dealer* has to pay?

Do you know that this winter you can save from $50 to $100 on your coal supply—have it delivered promptly—the cleanest, best heat-producing coal you ever used?

It is literally throwing your money away and adding to the high cost of living *with a vengeance* to continue to pay local prices for coal.

Our great mines near Vincennes, Indiana, produce enormous quantities of the finest coal in the country—the coal that is famous for its remarkable heat unit efficiency. We ship everywhere direct from mines in carload lots this splendid guaranteed fuel.

Tecumseh Coal

Save $50 to $100

on your winter's coal supply. We know that seems too good to be true, but it is an absolute fact that hundreds of people far and near are already buying Tecumseh Coal from us at wholesale and making this marvelous saving.

Not only is Tecumseh the best heat giving coal—but it is *all coal*—cleaned at the mines by the most perfect system ever installed.

No matter how big your coal bills have been in the past—no matter how much you have fattened the jobber's and dealer's profits—the time to turn your back on the old costly round-about way of buying is now. Begin with *this* winter to make this real saving.

It is plain common sense for you to save money by dealing *direct with the mines*. You owe it to yourself to find out the facts and prices—to learn more about Tecumseh Coal. All we ask is the opportunity to quote you prices—to prove in actual figures the splendid saving you can make.

This should interest you whether or not you intend to buy a full car of coal.

Club with Your Neighbors

If you cannot use a whole car—25 to 40 tons—you can easily arrange with your neighbors to divide up the shipment and still make this handsome saving on your winter's coal.

This money-saving plan is too important to be set aside. The amount of waste money you have been paying your dealer belongs in your own pocket. Keep it there. Right now take the first step. It obligates you to nothing. Just fill out and mail us the coupon in this advertisement. The prices we quote will positively surprise you. But do it now before the matter slips your mind. Address

HEN LAYS 282 EGGS IN YEAR

International Contest Honors Go to English White Leghorn Pullet—Second Place Goes to Connecticut White Leghorn With Total of 267 Eggs

THE NEW TITLE HOLDER, BARONESS IV, 282 EGGS IN ONE YEAR.

THE feature of the second international egg laying contest, which closed at the Connecticut Agricultural College with the month of October, is an English White Leghorn pullet which laid 282 eggs in the year and took the international title away from "Lady Showyou," which made the surprising total of 281 in last year's Missouri contest. "Baroness IV" is the name of the new champion, and her owner is Thomas Barron, of Catforth, England.

The new champion had a grand year of laying eggs, laying on an average of three eggs in four days. Starting with two eggs the first week, she never dropped below four a week afterward but twice; in the seventh she laid three and in the fiftieth two, and finished the last fifteen days with ten eggs. The other four in the pen had stopped when the contest did, but she didn't stop even then.

This pen won first place for total production with 1,190 eggs for the year, an average of 238, and each bird in it laid over 200 eggs. The five started the contest by laying eleven eggs the first week and maintained their lead to the finish, well ahead of all others, every bird laying each week up to the forty-eighth, with the exception of the eighth to twelfth weeks inclusive, when No. Three didn't lay. Six times it figured in the monthly winners, but first only once, for November.

"Baroness IV" and a sister which won third place for individuals make the leading pair of the contest. The sister laid 262 and their total was thus 544. Second honors for a pair, and the best American pair, go to a remarkable pair of Rhode Island Reds in the pen of Colonial Farm, Temple, N. H., which laid 245 and 248 respectively, finishing with a combined production of 493. The first of these two laid an egg a day through the month of August.

The best American bird is a Connecticut White Leghorn in the pen of Burton E. Moore, of Winstead, which, while laying seven eggs in a week but once kept up a steady grind and finished with the excellent record of 267 eggs in the year. Fourth place went to England, with first and third, a White Leghorn in the pen of Edward Cam, of Houghton, laying 256, but fifth honor comes back to the United States, to a bird of the same variety in the pen of O. A. Foster, Santa Cruz, California.

The geographical distribution of the winning pens will be noticed in the following list of the next twelve: Second place, Edward Cam, White Leghorns, 1,107; third, W. L. Sleeger, York, Pa., White Leghorns, 1,029; fourth, Edward Cam, White Wyandottes, 1,009; fifth, O. A. Foster, White Leghorns, 997; sixth, Colonial Farm, Rhode Island Reds, 968; seventh, Frank Toulmin, Burnley, England, White Wyandottes, 954; eighth, W. P. Canby, East Downington, Pa., White Leghorns, 952; ninth, Mrs. H. F. Haynes, Shoup, Idaho, White Wyandottes, 951; tenth, B. F. Moore, White Leghorns, tied with Beulah Farm, Stoney Creek, Ontario, White Wyandottes, 945; eleventh, Smith Brothers, Addingham, Pa., White Leghorns, 934; twelfth, F. A. Jones, Northumberland, Pa., White Leghorns, 928.

This gives four to England, one to Canada and the rest to a range of states from the Atlantic to the Pacific. Three pens are White Wyandottes, one Rhode Island Reds and the rest White Leghorns. Especially in the latter weeks White Wyandottes did fine work, the Cam pen finishing with twenty-six eggs in the last eight days. The Beulah Farm pen succeeded the second place pen of the first contest, but started more slowly and pulled up to tenth in the final weeks.

Mrs. Haynes' birds of this variety were interesting. The pen of six, five layers and a reserve bird, was selected

CONNECTICUT WHITE LEGHORN WHICH FINISHED SECOND.

from only sixteen pullets and Mrs. Haynes' knowledge of White Wyandottes had been gained with her own birds and by reading; they went on a pack horse and by stage fifty miles to the railroad and began laying the day after their arrival at Storrs; and they kept on in their steady stride in the latter weeks while pens with better records dropped back, until they finished a splendid ninth.

The Sleeger Leghorns were the leading American pen, with 1,029, and led in monthly scores four times, for April, May, July and August, and tied with Barron's for third in July. In May they set a monthly record for five birds which will take some beating, 141 eggs, and in the twenty-eighth week tied the Colonial Farm Reds for the contest high weekly score, 33 eggs. Only the Foster Leghorns equaled this later. In these five months No. Four in the pen laid 143 eggs out of a possible 153, and for eight weeks in May and June laid an egg a day. First honors for this sort of thing went, however, to a barred Rock in a West Philadelphia pen which laid 61 eggs in 61 straight days.

The total production of the 500 birds in the year was 77,916 eggs, an average of 156 per bird, which should do something to help the high cost of living when they are added to the breeding stock in this country. Most of the English heavy layers stay on this side. Six-

LACK OF BUSINESS METHODS.

In a sense, it is unfortunate that the individual who lives in town or city is referred to as a "business" man, while the tiller of the soil is simply the "farmer." We say glibly such and such a matter "affects both the farmer and the business man" just as if the farmer were not also a business man. As a matter of fact, were we called upon to select typical examples of shiftlessness and indifference as affecting business principles and methods, we would not look for it on the farm at all, but in towns and cities. This is not equivalent to saying, however, that it would be impossible to find cases on the farm where there is no system in methods of doing things and where business methods are entirely lost sight of.

Our attention is called to this matter by one of our subscribers, Mr. James Lawrey, who has passed through an experience which indicates to him that at least some farmers are lax in their methods of conducting their affairs. Mr. Lawrey says that he has written more than one poultry dealer who has been advertising either eggs or birds, without receiving a scratch of the pen in response. It is pointed out in this case that possibly the demand has exceeded the supply, but, according to Mr. Lawrey, this method of handling a prospective customer is wholly unexcusable.

It is a disappointment to us to think that cases of this kind have been discovered. If it could be demonstrated to the breeder of improved livestock how exceedingly careful successful merchants are in handling all their mail and in preserving in alphabetical order a card index giving their customers' names, the outcome of this demonstration would result in the introduction of a better business system in at least some instances.

In case the market should be brisk and correspondence should continue when there is no longer a supply of animals, fowls or any other class of produce to meet the demand, the prospective customer in every case should be courteously informed of this fact. Furthermore, the preserving of the names of those who are not supplied if they are courteously treated really constitutes an asset in one's business. A card or a letter sent early the next season to those customers who were too late in the first instance will undoubtedly, in the majority of cases, result in effecting a sale. Furthermore, one must not lose sight of the fact that a courteous reply to an inquiry makes you a friend there and then and will result in the spreading out of good words in your favor among neighbors, which is in reality creating still another asset in your business.

In dwelling on this matter we have in mind, in the main, our own advertisers. If there are those who have been careless in this matter in the past, we hope that the same mistake will not be repeated. Bear in mind that so simple a matter as the failure to answer an inquiry may result in spreading a report in a given neighborhood that will not be favorable to your business in the future. The day has passed when a letter can be put up on the clock and answered some time in the far distant future. The up-to-date man keeps a letter file and business correspondence is attended to almost by return mail.

CHANGING RURAL CONDITIONS.

Some superficial thinkers have the idea that, because the last census showed rural population to have declined in many states, this was a sign of a backward tendency in farm activity and development, but those who are most familiar with rural conditions understand that this doesn't indicate an abandonment of the farms, or a decreased farm acreage. It doesn't show that there were fewer acres in cultivation in 1910 than in 1900 or 1905. The same decrease is shown in the population of many villages and small towns, though almost all large towns, and practically all cities, indicated more or less increase.

The records show that nearly 6,000 towns in the United States have decreased in population, mostly small towns, while about 18,000 postoffices were discontinued by the postal authorities during the year 1911. Many country villages are slowly dying, since they are no longer needed. This change in rural conditions is due largely to the activities of big city stores, to rural routes, better roads, automobiles and better school facilities in the towns. Improved means of transportation, together with the modern distribution methods of important retail city establishments and their larger stocks, allowing more satisfactory selection, account for the decrease in population of so many small country towns.

As to the remedy that will preserve the villages, provided they are a real asset to the country, it can only develop out of a careful study of the situation and surroundings. Many small towns will pass away, as vast numbers have already passed away, and it is well that they should. They have fulfilled their mission, and are no longer needed. They were necessary in an early day to the farmers, who couldn't travel more than five miles over crude roads with overworked teams, to get their groceries. A farmer in most of the states can now drive fifteen miles easier than he could five miles during those days. The mail which once went to these villages is now taken direct to the farmers' homes from the county seat or some larger railroad town near by. Better public roads being constantly provided, and more and cheaper automobiles will probably still further reduce the size of the less progressive towns. Trolley lines have also had a tendency in this direction.

The same causes which have reduced the size of small towns have also been at work in the cities and large towns. The large retail stores in these cities and towns have increased their business 100 per cent, while the cities and large towns themselves have increased upon a general average of perhaps, from 20 to 50 per cent. The principal increase in population had been in the larger towns and cities during the thirty years from 1880 to 1910. The decrease has been in the villages and small towns. While in many cases farming communities decreased, this need occasion no alarm, for, undoubtedly, the same farms which were in cultivation thirty years ago are still in cultivation, only larger, and with better houses and fences upon them.

Many farmers have moved to town for the sake of good school privileges for their children, renting their farms to tenants. If the census enumeration could show the number of farmers who live in town for the benefit of school privileges, and go out to their farms a mile or two from the towns, in automobiles or wagons each morning to pursue their farming operations, as so many German farmers do in the old country, we would find that few, if any, farming communities have really decreased in population. Then many pretentious towns and small cities, ambitious to put on metropolitan airs, have extended their limits until the homes of many near-by farmers are within the city limits, and the census takers doubtless classified such farmers as citizens of these towns.

As a rule the average town, not a county-seat town, gets its trade within a radius of five miles, and in late years these villages gathered around country postoffices have so increased that the five-mile limits of many of them overlap each other, and a smaller trade radius is not sufficient to support even a village.

The means for increasing the population of many small towns as now constituted must grow out of local conditions. Good high schools or consolidated rural schools, poultry farms, hay-baling presses, grist mills, feeding pens for cattle and hogs, small creameries, ice houses, improved dairy cattle, good roads, motor car freights, express and passenger delivery to and from the county seat or nearest large railroad town will aid in sustaining such small towns as really serve a good purpose in the community and are for the convenience of farming communities, while in the South gins, peanut butter factories and sorghum cane mills and evaporators will also insure the prosperity and upbuilding of such towns when the country is rich, and thickly settled, even though the town is close to the county seat, or a large railroad town.

With good roads and a good motor truck delivery for freight and express, any of the enterprises and industries mentioned above should do well, though the village is off the railroad.

But even if the town goes down and vanishes from the face of the earth this is not an indication of a retrograde movement in the community. The tradesmen and small merchants who once did business in the village will move to the county seat with their stock, perhaps, there to enjoy a larger trade, or possibly they will sell out entirely and take up farming. The postmaster, when his office is abolished, will become a rural route postman, and the village will vanish, save for the grist mill, the blacksmith shop, the schoolhouse, one or two churches, and perhaps one general store selling the most common articles of food, hardware, furniture, dry goods and harness. Such changes really indicate improved conditions in the farming community.

These conditions should be noted by the live merchant in the city or large town, who wishes to keep abreast of changing conditions. The parcel post is now his willing servant, and if he is alert to his opportunities and the possibilities of extending his trade he will profit by such changed conditions, the same as the farmer and the one-time small village merchant who has now moved to the county seat, where he does a much larger business than before, still numbering among his customers many of the same farmers who formerly traded with him in the village, and who can now go to the county seat to trade on account of the improved roads.

METHODS OF APPLYING MANURE

In his book on farm manures, Prof. Chas. E. Thorne points out that the plan of piling manure in small heaps is more wasteful of fertility than it would be to leave it under the barn eaves. In the first place, the excess of fertility washed into the soil under manure heaps is an actual injury and, in the second place, the pungent invisible gas that is given off from manure handled in this way means that a great deal of valuable fertility is escaping.

Decomposition of manure can take place, according to Professor Thorne, only in the presence of moisture. Just as the evaporation of brine leaves only the salt behind, so when manure is spread thinly and allowed to dry out, the fertilizing elements remain in the dry matter. On the other hand, when manure is piled in heaps in the field, it retains its moisture, thereby furnishing ideal conditions for rapid chemical changes which lead to loss through leaching and through the evaporation of volatile gases. When manure is piled in small heaps bacterial action is increased and this in turn liberates even the mineral elements such as phosphoric acid and potash and these are washed away by showers.

The ideal system, according to Professor Thorne, viewing the matter entirely from the scientific standpoint, is to spread the manure thinly and evenly on the surface. It is desirable that manure be drawn promptly to the field before it deteriorates in the yard. Apart from the standpoint of conserving all the fertility, the cutting down of the labor alone by using a manure spreader is in itself an important factor in conservation. Considering the matter from the standpoint of convenience and having in mind the perfection and the economy of its work, the manure spreader, according to this scientist, should be ranked next to the automatic harvester in importance as a farm implement.

The plan of spreading manure on frozen ground during the winter season is a commendable one. While there might be a small loss from surface washing, yet this loss is insignificant as compared with those losses which occur in the average barnyard or when the manure is put in heaps in the field.

HUSKING OUT SHOCK FODDER.

An Illinois subscriber outlines briefly the various plans that might be used in husking out shock fodder. His communication follows:

I have tried a few plans of husking shock corn. Either of them are very good, but every farmer has his own method. He generally pursues the one he likes the best.

The first plan is that of loading several shocks of corn on a hay frame and hauling it to a shed or shelter where it is unloaded in a pile. Here it is husked out where one is protected from the cold wintry winds. The fodder is piled into the shed as the corn is husked and left there protected from the weather until it is fed. Another method is to husk the corn at the shock. Here is the plan I have used. First, I tear down the shock and lay it in three or four piles. I move a pair of light trestles to one of the piles, take up an armful of corn and lay it across these. Then I husk the corn and throw them into a pile on the ground. If ground is muddy a bunch of fodder will be placed near on which the corn is thrown. The fodder is tied into bundles with binder twine and laid aside. All the corn is husked, then the bundles are set up in the form of a shock and tied together with binder twine so there will be no twisting or falling down when the storm is on. It is easy to handle the bundles of fodder with a pitchfork and when hauling them out for the stock. It pays to tie the fodder into bundles, as it is more easily handled.

We are not very much in favor of one plan that is carried out by this subscriber, namely, that of throwing the corn on the ground when it is husked out. When this work is being carried on there is as a rule very little work being done with the horses and for that reason we like the plan of throwing the corn directly into a wagon. This cuts out the labor involved in handling the corn the second time.

THE USE OF GROUND FEED.

It is our observation that a feed-grinding outfit will be found on almost every farm where stock raising is the major industry. In other words, where calves and colts and hogs are being reared in considerable numbers and in due time fitted for market, there you will find, in most cases, a grinding outfit that is used to a greater or less extent. While it is not contended that all the grain fed to livestock should be ground, yet, unquestionably, it is profitable to grind at least part of it. An Illinois subscriber gives his views on this matter in the following communication:

When I was a boy at home on my father's farm we fed a great deal of ground corn to our stock. In the neighborhood was a feed mill, and we took the corn to this where it was ground, cob and all. When the cob was ground the horses and cows would eat the cob with the corn. We even fed the steers that were in the fattening pen on the ground feed. It seemed that they got the full strength of the corn, and did not pass so much off with waste matter.

While it is a little more trouble to grind feed and handle it after it is ground, I have been fully convinced that the ground feed is more valuable than the whole grain. It is more easily masticated, and for this reason proves beneficial for old animals and animals with poor teeth. For feeding the ground feed one must necessarily have strong, non-leakable feed boxes and troughs. These will prevent all waste, so that stock get every particle of the feed.

One should also keep the ground feed where it is perfectly dry, for if it becomes wet it will soon spoil if weather turns a little warm. Then the ground feed must be kept in bins that are free from rats and mice, for if they cut holes in the sides or bottom of bins a lot of it will be wasted.

For feeding animals the grain need not be ground very fine. In fact I like it better when it is coarser. This makes it better for handling and easier for the animals to eat. One should be careful not to overfeed the ground grain. When one has been accustomed to feed grain on the cob, he is very liable to feed too much when giving it ground. Be careful to measure it, and there will be no trouble.

We like the plan of feeding ground grain, as it were, in supplementary quantities. Take, for instance, the

matter of feeding out a bunch of hogs. It will pay, and pay well, to feed one meal of slop daily, and, ordinarily, on the average corn-belt farm, this slop should be at least partially composed of ground corn. For instance, a mixture of five parts ground corn, three parts shorts and two parts oil meal or tankage, will be exceedingly palatable, and it will, in our opinion, result in keeping the hog in the very pink of condition so that all the dry grain consumed will be used economically for meat-making purposes.

We could mention many instances where ground feed can be used to great advantage. Ground grain makes an ideal ration for young calves; for male animals it may be used to very great advantage where one is working three and four-year-old horses, and also in the feeding of old horses. Considering the amount of labor involved in grinding, we do not believe that it is profitable to attempt to grind all the grain consumed by hogs or fattening cattle, but, as said before, there is no question about the soundness of the policy of using ground grain in supplementary quantities.

A LETTER OF GOOD CHEER.

Nothing gives a publisher greater pleasure than to receive letters of appreciation from his subscribers. They show that his efforts are bearing fruit; they give him encouragement to continue the good fight. The cheering inspiration of such a letter as the one printed below can hardly be overestimated:

Herewith find check for $9 to pay my renewal and five new subscribers for three years each. The Iowa Homestead is the best farm paper published. Now, I am interested in other things than the Almighty Dollar. Every farmer in the grain belt ought to take The Iowa Homestead. I believe in education; in conservation; in good roads, not the so-called hard roads, but dirt roads constructed on a scientific basis, that is, with the water run out or kept from under them. In order to do this it will be necessary to establish a thorough system of tiling. The land should first be surveyed by an educated person.

Provided you want me to get some more subscribers send your terms. I do not want to make any money out of this, but I do want the people to get acquainted with The Iowa Homestead.

Such a letter (and it is used only as representative of scores of others, of similar nature, received every week) shows the publisher of The Iowa Homestead that he is making progress toward his ideal, that he has the moral and financial backing of the man for whom he is working: the prosperous, progressive farmer who wants to know how to make farm life more attractive, farming more profitable and the farm home more comfortable and satisfying to every member of the farm household.

Cannot every one of us, publisher and subscriber alike, find inspiration in such a letter? If every one of the big subscription family of The Iowa Homestead were to appoint himself a committee of one to undertake such a work as the writer of the above letter found so easy and pleasant, the effect would be far-reaching, making the paper forge still further ahead, as the most practical and entertaining of all the farm weeklies, inspiring the publisher to do still greater things and giving the subscribers the satisfaction which comes from good work well done.

The publisher of The Iowa Homestead hopes to receive many, many such letters within the coming weeks. There is not a subscriber but could easily secure the subscription of a friend or neighbor and sending these in, with a cheery letter of approval, the 1914 campaign to advance farming in the grain belt to a still higher plane would go forward with such enthusiasm as was never known before. Is it not worth the trying? Shall we not all join hands for a long pull and a strong pull, all together?

A NEW DAY IN BEEF PRODUCTION.

Many feeders of the corn belt have lost money on the steers that they have marketed during the last few weeks. This has been particularly the case for those who have handled heavy cattle. An Indiana feeder who was caught between the upper and nether millstone recently stated that he was ready to market seventy-five head of heavy cattle because, said he:

I am anxious to ascertain just how much my net loss will be. My steers cost me $7.75 a hundred laid down in the yard and I have fed them six months. I ought to have a spread of two cents a pound if I make any money and I doubt if I will get an increase of more than half a cent a pound. It will be the last bunch of heavy cattle that I will feed out and if I can buy calves at anything like a reasonable price I expect to take home two loads when I sell my heavy cattle.

There are thousands of corn-belt feeders that are in exactly the same predicament that this Indiana stockman finds himself in. Possibly a certain small proportion of feeders can solve the problem by starting out with calves instead of yearlings and two-year-olds, but our attention has been called to cases where calves have been lumped off at so much per head which in reality cost as much as 10 and 11 cents a pound. Under these circumstances it may be doubted whether there will be any profit when these high-priced youngsters come on the market a year later.

The situation is complex but there can be only one conclusion arrived at. If we are to produce enough meat in this country to supply our own people, to say nothing of our export trade, we must settle down to the policy of every farm producing its own cattle. If good blood is used there is an opportunity to finish baby beeves by marketing the young stuff between twelve to eighteen months of age, or, on the other hand, they may be more cheaply carried along and finished up around twenty-four months. It is doubtful if on corn-belt land it ever pays to carry well-bred cattle longer than two years. Now that the silo has come to stay the very best possible use of ensilage can be made only when it is fed to young and growing cattle. There is too much maintenance cost in carrying along a bunch of heavy steers and it involves, in most cases, a cost that only can be recouped by a big spread between the buying and selling price, and the experiences of the last few weeks show that that cannot always be counted upon.

MAKING THE TELEPHONE PAY ITS WAY.

Can the farmer make his telephone pay its way? I mean pay in actual dollars and cents. There are few persons who have telephones who feel that they get their "money's worth" during the year. But they count the pleasant chats and the time saved worth a good deal. Some farmers, however, by using their telephones make them pay enough to cover the cost during the year. By one deal, sometimes, a man will make enough to pay for his telephone rent for a year or more.

Here is a man who has a bunch of hogs to sell. He calls up a buyer in town A. The price is 7 cents. Another buyer in town B is called. He says, "Bring your hogs tomorrow and I will give you 7½ cents per pound." The man answers that the bargain is made and he will deliver the hogs. He has twenty hogs weighing 200 pounds each. That is four thousand pounds. He made a half cent by using his telephone which, multiplied by four thousand, gives $20. His telephone rent for one year is made.

A lady telephones to one town asking the price of turkeys. She is not suited with the price, so telephones to another. Her turkeys are engaged for a cent more per pound than she was offered by the first merchant she rang. She made twelve dollars by the transaction. Her telephone rent was paid. So by this method of keeping in touch or getting in touch with markets in different towns one can realize enough more to make the telephone pay its own way in dollars and cents.

CATTLE IMMUNE TO TUBERCULOSIS.

Prof. N. E. Hansen, of the South Dakota Experiment Station, has just returned from a trip to Siberia where he has been searching for hardy plants. He brings back the information that the Kirghiz cattle of southern Siberia are immune to tuberculosis and furthermore these cows produce a considerably higher percentage of butter fat in their milk than any other known breed. Professor Hansen is a shrewd observer, but at the present time he is not in a position to state whether the mere crossing of these cattle on our own breeds would carry with it the immunity from this disease.

We have always believed in the policy of searching the world for useful plants and animals. Much is being accomplished by cross breeding and by the production of hybrids, particularly in the plant world, but a given end can be attained much more quickly in many cases by importing from other countries plants having fixed characteristics, these not being subject to the wide variation which frequently comes from crossing.

It is of interest to know that the cows of this breed produce a rich milk, but of course after all it is even of greater importance to learn the amount of milk that is produced by the breed. We cannot turn the clock of time back a hundred years and take up a breed that is vastly inferior to our own cattle in total production. If, however, with the hardiness that apparently characterizes this breed, the cows are heavy milkers then this announcement is of much agricultural importance and the United States Department of Agriculture should lose no time in landing some of these cattle on American soil.

MAKE THE BROOD SOWS HUSTLE.

The trer endous loss that has resulted from the hog cholera scourge in the corn belt this year has worked a real hardship on thousands of swine breeders. Many a man has found the profits of a whole year and, in some cases, the profits of several years swept entirely away in the course of a few days or a few weeks at the outside. The situation is such as to force upon the attention of every man who handles hogs the great necessity of taking every precaution to prevent a repetition of this disaster in the future.

One important factor in this connection is to start the little pigs off constitutionally sound. This means that throughout the entire gestation period the brood sow should be handled in such a way that this result is accomplished.

To this end there are two factors that must be kept constantly in view. One is that corn alone is not a satisfactory ration for the brood sow, and secondly, special pains must be taken to keep the brood sow on the rustle. We are not going to lay down hard and fast rules as to what the sow should be fed because something depends upon conditions. We expect that corn will constitute the bulk of the ration and to it may be added, say, one part of oil meal to eight or ten parts of corn. Tankage is an excellent feed to use in this connection and it is richer in protein than oil meal. We have known instances where very good results were obtained from feeding one pound of tankage to fifteen pounds of corn. Then, of course, there are the mill foods and even small grain like wheat, oats and barley may be used to very great advantage. These ought to be ground or soaked and they may be made to constitute one-half the grain ration.

But, as said before, food alone is not enough. We believe in the theory of getting the sow in fairly good flesh before farrowing time and if she is fed enough to accomplish this purpose she will be lazy. When sows have access to nice comfortable beds at all times of the day and night they spend entirely too much time loafing and in order to head this off we very strongly favor the plan of turning them into pastures when the weather is at all agreeable and keeping them there for several hours each day. As the gestation period advances it will pay and pay well to feed them some of their grain at a considerable distance away from their sleeping quarters, thus making exercise compulsory.

We expect to revert to this subject many times before spring because it is impossible to overemphasize the importance of this matter of exercise. We have in mind one instance where twenty-five sows saved an average of eight pigs per head and in not a single instance were there weak pigs farrowed. These sows were fed a part of their grain from a crib located a quarter of a mile from their sleeping quarters and, as a matter of fact, they spent a considerable part of each day walking backwards and forwards to and from this crib. Even sows weighing 600 or 700 pounds were constantly on the go under these conditions and, as said before, the result was that in every case strong, vigorous pigs were farrowed.

This, in our opinion, is the way to build constitution and to get hogs into that condition whereby they have, to some extent, at least, a natural immunity from disease.

Oliver Wilson, of Peoria, Ill., was reelected worthy master of the National Grange. The expected strong opposition of the so-called insurgents to Mr. Wilson did not materialize, the election being practically unanimous. The insurgents were successful, however, in their fight against Charles M. Gardner, master of the Massachusetts Grange, candidate for national lecturer. George W. F. Gaunt, Mullica Hill, N. J., high priest of Demeter, won the three-cornered contest for the position, the present lecturer, N. P. Hull, of Michigan, being the third candidate. W. H. Vary, master of the New York Grange, defeated the incumbent, D. H. Healey of North Woodstock, Conn., for national overseer.

DAD

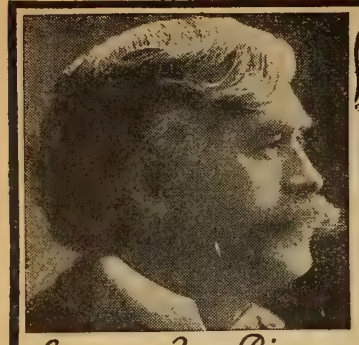
DAD was never no hand to fuss;
Used to hurt him to hear us cuss;
Kind o' settled in his old ways,
Born an' raised in the good old days
An' the farm was home, not a toilin' mart,
When a tattered coat had a kindly heart,
An' a man was judged by his inward self;
Not his worldly pelf.

Seems like 'twas yesterday we sat
On the old back porch for a farewell chat
Ere I changed the farm and the simple life
For the city's roar and bustle and strife.
While I gayly talked of the city's charm
His eyes looked out o'er the fertile farm
An' he said as he rubbed where his hair was thin,
"All right, son, you win."

'Member the night I trudged back home,
Sinkin' deep in the fresh turned loam;
Sick and sore for the dear old place,
Hungerin' most for a loved old face.
When I had climbed the hilltop o'er,
There stood dad in the kitchen door,
An' he says in a voice from deep within,
"Hello, son, come in."

One winter's day, the first of snow,
He went the way that we all must go;
An' his spirit soared to the realms above
On the wings of a simple hearted love.
An' I know that when I cross the bar
I'll find him there by the gates ajar,
An' he'll say, as he idly strokes his chin,
"Hello, son, come in."

—William Edward Ross.



James M. Pierce

THE PUBLISHER'S VIEWS ON TOPICS of THE TIME

THE FARMER AND THE INCOME TAX.

DURING the past few weeks I have received a number of letters from farmers, asking how the new income tax will affect them and for particulars concerning it. While the law is ambiguous in many particulars, so that lawyers and financiers are at variance as to certain provisions, there is no question but that the law affects the income of farmers the same as city men, with this difference only: The farmer himself will report his net annual income and pay the tax direct, while the city man, on a salary or with a stated income, will have the tax deducted by his employer or at the source of his regular income.

The law plainly provides that the tax on the "income of an individual which is not fixed or certain, and not payable at stated periods, or is indefinite or irregular as to amount or time of accrual" shall be paid by the individual himself and names the farmer as the first man included in this list. Herein the case is different from that of the city man on a salary. With him the income tax is deducted by his employer from his annual salary. But the income of the farmer is irregular; depending upon weather, crops and a variety of circumstances and conditions. If a city man receives a salary of $5,000 a year (and has no wife living with him) he is taxed 1 per cent on $2,000, which is the excess over the minimum of $3,000, and this tax of $20 is deducted from his salary each year by his employer. But if the farmer sells $5,000 worth of grain or livestock to a commission man nothing is deducted from the total because of the income tax. Instead, the farmer, once a year, is bound by law to make a report of his annual net income and over against this $5,000 sale of grain or stock is placed the expense of bringing it to market. If the net profit of this single transaction is $1,000 it is added to the net profit of other transactions for the year and the income tax is paid only in the event that the total net income of the farmer for the year exceeds $3,000, or $4,000 if there is a wife living with him.

A great many people misunderstand the new income tax law completely. The ordinary man, be he farmer or city man, has to pay 1 per cent on whatever amount his net annual income is in excess of $3,000. If he is a married man, with a wife living with him, the exemption is $4,000. The tax is then 1 per cent on the amount in excess of these figures. Suppose the net income of a farmer, who is a single man, is $5,000. He will be obliged to pay $20 a year income tax—1 per cent on $2,000. Suppose the net income of a farmer, who is married, with a wife living with him, is $5,000. He will be obliged to pay $10 a year income tax, 1 per cent on $1,000. And so on up to the limit of $20,000 a year net income, when the tax assessment increases. Many farmers have written me under the impression that the tax of 1 per cent applied to the entire income. It applies only to that portion above the exemptions I have set forth herewith.

The next question that naturally arises is: "How will the farmer figure his net income?" The law is specific on this point. It states that in figuring net income certain deductions shall be made, listing them as follows:

First: The necessary expenses actually paid in carrying on any business, not including personal, living or family expenses. This would include the wages paid hired men, cost of feed and seed purchased and so on.

Second: All interest paid within the year by a taxable person on indebtedness. This would include interest on a mortgage upon the farm, the stock or the machinery.

Third: All national, state, county, school and muncipal taxes paid within the year.

Fourth: Losses sustained during the year, incurred in trade or arising from fires, storms and so on, and not compensated for by insurance. This would include damage to crops by hail, to buildings by fire, and so on, provided it was not covered by insurance.

Fifth: Accounts due and actually charged off, during the year, as worthless.

Sixth: A reasonable allowance for the exhaustion, wear and tear of property arising out of its use in the business. This would include wear and tear on farm machinery and depreciation of buildings.

In computing his net annual income, therefore, the farmer first takes his total gross inco e—all that he has received throughout the year—deducts therefrom the amounts exempted in the preceding paragraphs and then pays the income tax upon whatever amount this balance is in excess of the $3,000 or $4,000 exemption, depending upon whether he is married or single.

I hope I have made myself clear; if not, I will be glad to take up individual cases if my readers will write to me direct. I put the whole matter up to a Washington authority recently and here is a paragraph of his answer:

> The new income tax will fall upon farmers just as it will upon all other individuals, except that the farmer will probably find it more difficult to make his returns comply with the regulations that are to be issued. He will be expected to list as his income the increase in the value of his land and stock, as well as the income from his crops, while on the other hand, he will be supposed to set down as an offset the depreciation of farm machinery and buildings.

It only remains to add that the tax will have to be paid by farmers, as well as by city men, for the ten months from March 1, 1913, to January 1, 1914, while in future years the returns must be made by the farmer, under oath, to the collector of internal revenue for his district.

This, in brief, is the working of the income tax as it affects the farmer. I shall have more to say upon the subject from time to time, as occasion demands. Personally, I believe the tax is a fair and just one and that every patriotic American can well afford to give back to the government this small percentage of what he has been enabled to earn under a stable and upright government. The law for the time being may be indefinite and ambiguous, but it was demanded by a majority of the states, acting as the federal constitution requires. It is now our duty, as loyal American citizens, to obey it, helping the authorities to enforce it to the best of our ability.

THE FOUR R'S OF LEARNING.

THE three R's of the country school when I was a boy (reading, 'riting and 'rithmetic) are about to be increased to four, by the addition of roads. I am inclined to think that more will be done to bring about permanent good roads by taking up the work in this manner than by most, if not all, the gigantic bond-issuing plans thus far formulated.

The present plan is not only to have classes in the fundamental principles of road building in the rural schools, but to use the schoolhouses at night for short courses to which the entire countryside will be invited. There is much about road building that can be successfully taught in the public schools. For instance: the effect of good roads upon public health, the necessity of proper drainage, the selection of materials, the fundamentals of engineering, and so on. Within the past few years there has been a marked tendency toward making rural schools more practical. Nowadays, in thousands of grain-belt rural schools, you will find the children learning arithmetic through problems which deal with farm work: the cubic contents of a corncrib, the value of a wheat field of so many acres, at so much per bushel, and so on. The plan to teach the fundamentals of road building is simply in line with this, making country schools more practical, localizing the courses of study and interesting the young minds in things which they can easily grasp because of daily association.

I am a firm believer in the policy of using schoolho_ses at night for public gatherings. If the state highway commissions co-operate with the federal bureau of good roads, some very interesting and instructive programs can be arranged, including talks on road building, moving pictures of road workers and practical advice on what local materials are best adapted to local needs and local purses.

Good roads will come in this country when the people are a unit in demanding them. The reason so many of the far-reaching, bond-issuing propositions have been turned down by the people is because these propositions have been devised by a few men, who have assumed the task of leadership, often without understanding local conditions and local needs. A few weeks ago it was heralded far and wide that Pennsylvania would issue $50,000,000 worth of state bonds with which to build an elaborate system of permanent roads. But when the proposition was put to the voters at the recent election, it was defeated. The people had not been consulted in the plans.

Road-building reforms, just as much as political reforms or anything else, must come up from the people, and not down from a few self-chosen leaders. The beginning must be made with the individual. When the farmers of a township are a unit in demanding good roads the movement will spread to the county; from the county to the state; from the state to the nation; and then the country will be ready for the big, far-reaching plans for which it is not ready now, because the work has not been begun in the right manner and at the right place. I see no single factor more likely to bring about this unanimity of road sentiment than the movement to educate the people to the advantages (financial, moral and physical) of good roads through the medium of the country school. I shall follow the progress of the campaign with interest, but even now, at its very beginning, I have enough confidence in it to predict that it will make good, and that its effects will not be long in coming.

PROSPERITY.

I HAVE been greatly interested the past few days reading a number of items printed in a daily newspaper of the grain belt under the general heading "Prosperity." These items deal with sales of farm lands and record prices brought by farm products. They show that prosperity has struck the grain belt as never before and that the farmer is on the top of the wave.

When you put a couple of these "Prosperity" items in contrast with a couple of quotations showing how our forefathers and even some of our present-day cousins farm they are all the more striking. Before I share these "Prosperity" items with you I want you to consider this description of farming as it was carried on in our own country in Washington's days. The sentences were written by Washington himself:

> A piece of land is cut down and kept under constant cultivation, first in tobacco and then in Indian corn (two very exhausting plants) until it will yield scarcely anything; a second piece is cleared and treated in the same manner; then a third and so on, until probably there is but little more to clear. When this happens the owner finds himself reduced to the choice of one of three things: Either to recover the land which he has ruined, to accomplish which he has perhaps neither the skill, the industry nor the means; or to retire beyond the mountains; or to substitute quantity for quality in order to raise anything.

Such was farming in Washington's day, a haphazard, hit-or-miss method of tilling the soil, without thought of rotation of crops, conservation of the elements of fertility or anything but the immediate present.

"But," you say, "all that is changed now; we know better; everything is different." Very well then, consider another picture, painted by the author of a book called "The Southern Highlanders," which deals with the farmers of today in the Appalachian mountains, a hundred years behind the times. Here is his picture of farming as it is carried on in that section in this enlightened day and age:

> "Thar, I've cl'ared me a patch and grubbed hit out—now I can raise me two or three severe craps!"
>
> "Then what?" I asked.
>
> "When corn won't grow no more I can turn the field into grass a couple o' years."
>
> "Then you'll rotate, and grow corn again?"
>
> "La, no! By that time the land will be so poor hit wouldn't raise a cuss fight."
>
> "But then you must move and begin all over again. This continual moving must be a great nuisance."
>
> He rolled his quid and placidly answered: "Huh-uh, when I move, all I haffter do is put out the fire and call the dog."

I have purposely given you these two pictures—one of farming in the early days, even by the best of farmers; the other of farming today, by the worst of farmers—in order that you may compare them with two "Prosperity" items which I give verbatim from the daily newspaper. Here is the first one:

> Park Way, a Marion county, Iowa, farmer, who owns 480 acres of the best Iowa soil in Liberty township, fifteen miles southeast of Knoxville, has realized a total of $27,054.14 from the products of that farm since February 2d. The products consisted of 675 hogs marketed between February 14th and October 25th; 148 steers marketed August 12th and October 13th; one bull sold for $105 July 1st and 2,760 bushels of wheat sold August 12th. The stock was all sold to one Bussey firm.

Here is the second one:

> With $9,000 in the bank from one year's crop of onions on twenty acres, M. Luger and W. D. Luger, farmers near Osseo, Minn., declare their farm has been better than a gold mine. Planting Red Globe and Yellow Globe onions, these two farmers harvested practically 600,000 pounds of onions, and sold them for $1.50 a hundred. The total receipts averaged $450 an acre, which is considered a high price for Hennepin county real estate.

Could any contrast be more striking; could anything more conclusively show the great advance made by the grain-belt farmer? I have traveled extensively on three continents. I have been in the richest countries of South America, where cattle graze on rich, lush grass all the year around and where millions of acres of land are to be had for a few dollars an acre. I have been in the European countries which many men hold up to us as the farming models of the world. I have traveled all over the United States, from the Atlantic to the Pacific. I want to say to you, right here and now, that in my humble judgment the world has never seen such advanced, progressive and prosperous farmers as are to be found in the grain belt today; the world has never seen such advanced, scientific farming as is going on round about us every day.

It is all very well to hold up an incentive, to make the goal still a little further on; it is wrong and unjust to belittle the grain-belt farmer by overpraise of farmers elsewhere or of another day. "Prosperity" farm items are to be found on every hand; let us give due and proper credit to the man—the hard-working, clear-thinking, far-seeing farmer—whose industry, thrift and careful attention to every detail of the fine art of farming have made these items possible.

James M. Pierce

THE EXPERIENCE MEETING

Swapping of Facts Learned by The Homestead Busy Workers

"The Experience Meeting" has been made a regular department of The Homestead, to appear week by week. It will consist entirely of letters written by farmers telling their experiences and observations in the field, the feed lot and around the farm generally. They will deal with what the writers have learned, either by personal experience or observation, in actual farm work; a helpful device, a method of increasing some crop, a division of the household work so as to secure best results, and so on. The Homestead would like very much to have every reader participate in this experience meeting. Send in your letters right away, on any farm subject, addressing them to the editor of The Homestead, Des Moines, Iowa. If all will participate this new department will become invaluable.

TRIED SEVERAL VARIETIES.

To the Editor of The Homestead:

You ask your readers for their experiences with the ever-bearing strawberry. I will give my experience, hoping it may help some others.

Three years ago last spring I bought four varieties, the Superb, Francis, Americus and Productive. At that time they cost $3 to $5 a dozen. I discarded the Productive variety after the second year. It only bears in spring and fall and is rather small in size. Of the other three the Superb is far the best in regard to size, productiveness and market qualities. If given hill culture I never saw a plant outyield it in the spring. I raised some this spring. Seven of these berries laid side by side measured twelve inches across.

In a month after bearing a full spring crop they will be full again and continue to bear until the ground freezes. I have plants now loaded with bloom (November 15th). On account of the extremely dry summer there were few summer berries this year. Last year they bore all summer until late in November. I have tried most of the spring varieties and intend to plant three or four acres next year. I shall plant very few except the Superb.

I tried the Progressive this year, but could not tell what it would do on account of the drouth.

G. W. Harrison.

USES BOTH SILO AND SHREDDER.

To the Editor of The Homestead:

I have done some shredding for the last ten or twelve years, for although I have a silo, I can't put all my corn in that. Most of the corn that is left from the silo is put into big shocks until it is dry. Then I hire a large shredder, one that is fed from both sides and costs $1.50 per acre or $1.50 an hour, this being in addition to the cost of coal which is about $5 a day. This outfit will run through about fifteen acres a day where the corn goes sixty bushels to the acre.

I like to have the shredder fodder blown directly into the mow, but if more room is required I build a large feed rack into which the fodder is blown. This is located where the cattle can run to it and then you can push it down as you want it. Sometimes there will come a snow and if this gets mixed with the fodder it will heat and make good silage. I generally leave a few acres to feed in the shock. With the fodder shredded and close at hand you have your feed where you can use it any time and without waste.

Butler Co., Ia. W. Compton.

MAY THE FEVER SPREAD!

To the Editor of The Homestead:

This is about the time of the year for me to catch the road-dragging fever. I have two attacks a year, one in the spring, about the time the ground hog comes out. This one lasts until spring rains are over. Then in the fall it gets me again and lasts until the roads freeze up.

It is so easy to drag a road. Last week I was plowing for oats and as it is almost one-half mile to the field and I can go along the road, I hitched to the drag and rode to the gate, then left the drag until noon and rode back to the barn lot. See how easy that is? I always leave my drag by the side of the road near the driveway, and about every time I have the team out, at any kind of work, I take a turn on the drag. A road that is dragged after each rain doesn't get so muddy in the spring nor so dusty in the summer, as one that is allowed to get all cut up. Good roads make a good country.

This township is replacing all wooden culverts with ones built of concrete, and I don't know of a mile of road that is not dragged. No, we don't all have automobiles. Some have, but a lot of the farmers in this section are "queer" enough to believe that a big-body, low-wheel, double-action manure spreader is a greater asset on a farm than a buzz wagon. It is all right if you can have both, but, brother, just take a tip from me and get the spreader first.

Take your family to the circus in the spring wagon, over a well-dragged road, and the Lord will smile on you and men will rise up and call you blessed. I. P. Leach.

Grundy County, Missouri.

A FEW OF THE FINE POINTS.

To the Editor of The Homestead:

Whether selecting corn for seed or show one should pick out the very best ears possible. So much has already been said about the selection of corn that it seems almost as if it were a useless repetition to again mention what has been discussed so many times, but for the benefit of the man who is this year for the first time turning his attention to the selecting of good seed corn, a few remarks seem advisable.

The first and most important point this year, and in fact any year, is the selection of seed corn in market condition. Select ears that are sound. See that there are no smutty or decayed spots on the ear. Watch out for the purple mold that was so prevalent two years ago.

Cylindrical ears are the best, but this point is not considered as important as deep square kernels with broad germs. (The average farmer will not have time to examine many germs, but if the kernels are broad and deep the germ is usually all right.) The medium rough ears usually have the deepest grains, while on the very smooth ones the grains are shallow.

Choose ears, where possible, with a deep, well-rounded cavity at the butt. A well-covered tip is pretty, but not essential to a good ear of seed. The kernels should be uniform and in straight rows that do not run out before they get to the ends of the cob. The cobs should be all of one color.

After some practice a mere glance at the ear as the shuck is stripped from it is sufficient to determine whether you want that ear to go in your wagon bed or in your seed box on the side of the wagon.

Howard Co., Mo. E. L. Hughes.

TWO YEARS' EXPERIENCE IN SHREDDING FODDER.

To the Editor of The Homestead:

I had my corn shredded for two years and like it for feed. While at first thought it seems rather expensive, still when you consider husking the corn out of the shock, tying it up and then hauling it to the feed lot, I believe shredding is the cheapest.

In this locality we have to pay 6 cents per bushel for shredding and furnish all the help except the machine men. If the fodder is stacked it will require four men to pitch, one man to haul the corn away and one man to mow the fodder away. If you shred from the field it will take from six to eight teams to draw it in, according to the distance.

Be sure to have the fodder dry when you shred it, otherwise it will spoil. Always put it in the hay mow or in a shed, if possible, as it should be kept dry, and besides, it is hard to handle in a wind after it is shredded.

When feeding dry fodder I make a practice of giving a little oil meal to the stock as it keeps their bowels in good condition and there is no danger of indigestion. I also see that they have access to plenty of salt and water.

Faribault Co., Minn. Subscriber.

INBREEDING TOO EXPENSIVE.

To the Editor of The Homestead:

To produce a pure-blood animal, inbreeding should take place five times. In doing this we set aside the law of diversity in life as set forth in all things natural. There are no two things alike. No two leaves on a tree are alike, nor are there two beans in a sack alike. Without this great diversity in life, life could not exist. It would degenerate and finally run out. Therefore, to inbreed would be using the same blood five consecutive times which would tend to weaken the offspring. Were the human race to indulge in inbreeding to this extent we would be a race of hare-lips and imbeciles. And yet the same laws that govern the human family in this respect should also apply to the brutes.

In Europe the crowned heads are such sticklers after royal blood that they are all relations, resulting in the weakening of their offspring. Owing to serious infirmities, the czarowitz can never succeed his father as czar of Russia. There is lunacy in the royal family of Austria and some of the German principalities, also in Belgium; the kaiser has but one hand, a mere lobe taking the place of the other hand, and the king of Spain has two deaf and dumb children.

Here are a few instances that have come under my own observations: A company paid $3,000 for a blooded stallion, a fine looker. He got just one colt out of a large number of mares served. I went to Ft. Scott to buy a fine gray Percheron stallion. After reaching there I found the owner had sold him into a big transfer team for $100 because he had gotten but two colts out of some fifty mares served.

Two expensive red hogs were brought in here. The male became coon footed, getting down on his joints and finally dying. The sow went to the butchers as a two year old without reproduction.

Several years ago a man suffering with an attack of rooster on the brain brought a high-priced bird down here. I went to see him. He was a big, stupid looking thing, seemingly without energy to reproduce himself or whip a duck.

These, of course, are exceptions, yet they show that the disposition of inbreeding is to weaken the offspring.

To increase the vitality of blooded stock, I would suggest the raising of pure bloods in the cross. For instance, mating all the draft horses together in their class; the saddle and harness horses in their class; throw all the milk stock together. The best milk cow I ever owned was a pure-blood cross between the Holstein and the Jersey. The Holstein increased the size and flow of milk in the Jersey while the Jersey added to the butter fat in the milk of the Holstein.

Some of our hardiest hogs are crosses between the Berkshire and the Duroc. A. L. Brace.

Taney County, Missouri.

LOW HEADING BEST.

To the Editor of The Homestead:

My experience convinces me that the low-headed tree has three very important advantages; it is easy to spray, easy to trim and easy and economical to pick. Most of my apples can be picked standing on the ground, and when one is paying $2 per day for pickers it can easily be seen how much can be saved in "toting" and placing heavy twenty and thirty-foot ladders, crawling up, reaching out, far beyond, to get a peck perhaps, and then down and change position.

I can spray and pick my crop at perhaps one-half the expense of the high-topped trees. Then, too, in stormy weather the wind has not one-half the purchase on my trees that it has on a high-trimmed tree. I can see but one doubtful advantage of a tall umbrella-shaped tree, and that is that one can drive under it, and cultivate it perhaps. But when it comes to orchards, intensive cultivation is about outrunning its advantages.

In this middle-western country I believe it will be found a good and wholesome practice to let the ground around full-grown trees rest for a few years. What if the grass and weeds do grow? Cut them occasionally and let them lie, as they are nature's best fertilizer. Let your trees work for themselves sometimes and see how much quicker and more beautiful they will color up. Besides, when a tree has its growth why intensively cultivate when it merely produces more tree growth? A good layer of grass and even weeds will protect the ground from the hot sun and that makes a good thing a hot, dry season.

Marion County, Mo. C. M. Fette.

LOW-PRICED HOGS—HIGH-PRICED MEAT.

To the Editor of The Homestead:

Here is what the hog does after he leaves the farmer at 8 cents per pound until he reaches the consumer at 30 cents per pound.

First, in every small village there are from two to four stock buyers who buy hogs from the farmers, and they have families to keep from the profits they derive from handling these hogs. Then comes the railroad that must haul the hog to market and must have enough to keep up expenses and support a lot of high-salaried officers. The stock yards with their vast army of employes must have living expenses for handling Mr. Hog and after them come the commission men, then the packing houses with their workmen, all with families to support. The traveling salesman and the retail man must have their living and then, though I mention it last, it is not least, the board of trade has a whack at the hog also through the grain that it takes to produce him. Is it any wonder considering all who must have a profit off the hog, that the price jumps from 8 cents at the farmer's pen to 30 cents on the consumer's table?

Allen Co., Kan. A Hog Raiser.

NEW WAY TO SALT MEATS.

To the Editor of The Homestead:

I have just discovered a novel plan by which some fanciers are preserving meat in warm weather. One realizes that often meat will spoil before the salt reaches the bone when salted in the old way. Seeing how the doctors used the hypodermic syringe, this man constructed an instrument something after the same order, but considerably larger, with which he squirts the salt brine to the bone at the start. So there is no spoiling of the meat before the salt from the outside can penetrate to the bone where the spoiling always begins. He says that he has never lost a single joint of meat in the five years he has used it. Before he discovered this method of preserving meat his losses were heavy each year. Many other farmers in his neighborhood have tried out his plan with good results. I am sure that the man who follows this plan will have greater satisfaction in preserving his meat in the warm weather.

W. D. Neale.

Malcolm H. Gardner, superintendent of advanced registry, Holstein-Friesian Association of America, writes: "I am advised by preliminary reports that the Holstein-Friesian cow, Crown Princess Maxie DeKol 2d, 118991, has broken the record for fat production in the senior four-year class of the thirty-day division, by producing in thirty consecutive days 113.8 pounds of fat from 2,588.4 pounds milk. She freshened on September 5th, at the age of four years, ten months, twenty-three days. Her sire is Royalton Johanna DeKol 44596; her dam, Crown Princess Maxie DeKol 90415. She was bred by Mr. J. S. Clifton, Alvordton, Ohio; and she is now owned by Mr. G. W. Rising, Fayette, Ohio. She displaces Agatha Pontiac 99818, whose record for thirty days is 112,081 pounds of fat from 2,365.5 pounds milk.

Big Ben

8,760 Hours on a Drop of Oil

20,000 Jewelers say that Big Ben does *more efficient work* for less pay than any other clock built. He's a regular glutton for good work.

In return for one little drop of oil Big Ben will work for you a full year. From "Boots on" to "Lights out"—365 times—he'll guarantee to tell you the time o' day with on-the-dot accuracy. He has made the same guarantee over 3,000,000 times and made good every time. He'll make good for you. More than $8,000,000 has passed over good jewelers' counters for Big Ben and his brothers.

A Big Ben battalion, over 3,000 strong, leaves LaSalle, Illinois, every day. Every one of them feels proud of his triple nickel-plated coat of implement steel; his dominating seven-inch height; his large, bold figures and hands, and his big, easy-to-wind keys. No other clock can match their looks and ability to serve.

Things move with a will when timed with Big Ben. He'll wake you *gradually* by ringing every other half-minute for ten minutes or rout you out in a hurry with one long musical ring. Suit yourself how he does it. You can shut him off short in the middle of his call, if you wish.

He is built in a live town for live wires. And his best work has been on the farm. Before-breakfast chores are started *right on time* when Big Ben time is set. *He never oversleeps.* He runs on time, rings on time and stays on time.

If your jeweler doesn't sell Big Ben, send a money order for $2.50 to his makers—*Westclox, La Salle, Ill.* He will come to your house by express or by parcel post, all charges prepaid.

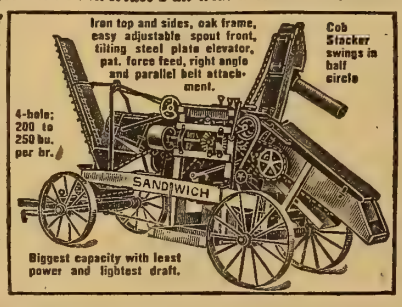
SANDWICH Iron sides CORN SHELLERS

Turn Idle Power Into Gold!

Every winter—when your team or engine is idle—you can clean up $600 to $1000 shelling corn for farmers all around you. Lots of hustlers with Sandwich Shellers make more than that. Figure your nice fat fortune in five or six years. Yet the Sandwich will mint you money for a life-time! *William Arnold, Red Oak, Ia., shelled 1400 bu. in 7 hrs. last Fall with a Sandwich 4-hole in constant use since 1868!*

Beware of "Copies"

The world's first Power Corn Sheller was born in our factory before the civil war. Now most makers copy it—as far as the law allows. Others try to substitute. But all have failed. For imitation means limitation. Without Sandwich inventions they can't equal Sandwich performance.



Your Own Terms

We cut out the jobbers' profits by selling direct to you through our own organization of branches and agencies everywhere. You get the terms you want besides. And you pay us from your first year's profits—the easiest way to get in the shelling business.

First call—Top pay

You will get them both from Farmers who hire their crop shelled. They've learned from boyhood that the Sandwich *no-choke screens* turn the corn out clean as a whistle—soft, sound or frosted. Then the corn grades highest. So Sandwich sales lead other shellers 300%.

FREE Sheller Book

Wherever you live, however much or little corn to shell, this Free Book shows a Sandwich Sheller to meet your special needs. It gives you the heart-to-heart facts on sheller construction and operation. A postal brings it postpaid. It's your first step. Write today.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

If everyone would observe the rules of the road, accidents would be fewer in number. I am surprised, however, whenever I go to town on a "big day" to see how many "jay" drivers there are, meaning those who are driving on the wrong side of the road or street or who turn wrong when turning out.

The public sale season now seems at its height. Those who plan on making a change before spring ..re selling now. There will be another grist of sales just before the first of March, no doubt. All property is selling well.

I am impressed with the galvanized steel culvert when it has been put in right, but when it is thrown on top of the ground and a little dirt rolled over it I am likewise impressed with it, but in a different way. Such humps also impress the automobile drivers.

The civet cat (small skunk) is not the pest it might be when the cribs are filled with corn. They can go where a cat cannot, and they are just as good mousers. They will suck eggs and kill small chickens, but I have observed they do not when there are plenty of mice around the premises.

This has been a great fall for everything sown since early September. Some of the wheat is getting rather large. In fact, it should be pastured rather more than most of it has been. Too great a growth made before winter is just as detrimental as not growth enough. Those who have wheat and have it fenced so it may be pastured are saving much feeding.

I have been watching those who have done considerable of it in the past two years, and am convinced that manure cannot be used to better advantage than on alfalfa. It makes a wonderful difference in the hay crops, really making more value by increasing this crop than if used on corn land. Of course, when a person has enough it is enough, but few of us have too much alfalfa.

The cost of maintaining a good fence is greater than most of us realize. Posts are rotting all the time, and some along the line usually need replacing every year. Where a fence is not needed it is better to have none—that is, if you want to cut down expense bills. Fields divided too much by fences often cause extra trouble in farming.

When the wood frame in farm machinery was discarded and machines were made almost wholly of steel and iron, it was said that sheds for machinery were no longer necessary, as, being of iron and steel, machinery would take no hurt if it did stand out in the weather. That has proven a great mistake. The all-steel machine loses strength by rusting and rotting, not as rapidly as does wood, but to a greater extent than most of us think possible.

The catalpa is certainly a great tree for quick growth and for post material of lasting qualities. Most quick-growing timber is worthless for post material, but the catalpa is an exception. While very light, catalpa is very strong, and it has great lasting abilities in the ground.

The road-dragging season should not end the first Monday in November just because the township trustees settle with the road supervisors on that day. The dragging just before the ground freezes up is the best one of all.

I hauled a two-ton load on a low-wheeled, broad-tired wagon, the other day, and a few days later hauled a similar load on the common narrow tired farm wagon. I have a kindly feeling toward the low wheels and broad tires for use about the farm, but this one test convinced me it is not the combination for heavy hauling on dirt roads. The load on the common wagon pulled much easier.

For a few days after being turned into the stalk field the cows are too independent to eat anything that is placed before them in the manger, but this pride does not last long. When the field is reduced to bare stalks and a few dry husks the manger takes on a different look.

The old sweep cob crusher is more out of date than the high manure spreader, but from it we learned that crushed ear corn is good feed and those who have gasoline engines will do well by getting a cob-crushing mill.

"Spare the feed and spoil the colt" does not mean that a young colt should be fed as much as a work horse. It is always possible to overdo a good thing.

After all these years, barbed wire has at last found its true place of usefulness on the farm and that is at the top and at the bottom of woven-wire fencing. A perfect fence for all kinds of stock can hardly be built without a combination of the two.

There are some farms where the buildings are in such fine shape that no repairs are necessary, but they are exceptions. As a rule there are repairs to be made that were neglected during the busy season and right now is a good time to put in the stitch that saves nine.

Do a lot of thinking on your own account before you allow a smooth-talking land agent to trade a farm four times as large as yours to you, even though he may tell you that the land is better and the climate "just about the same as here." There is reason in all things, but in "hoss" trades and land deals it is very seldom that both sides win.

It seems that there are a few who think that all our ills can be cured by law and at present are making a great noise about passing a law prohibiting the sale of veal calves in order that our beef supply may be increased. If a minimum price for two and three-year-old beeves could be fixed by law it would come several points nearer the mark they are aiming at.

Corn is selling at 50 cents per bushel at our local markets, which is a fair price, but what has become of our "dollar a bushel" calamity howlers of last summer?

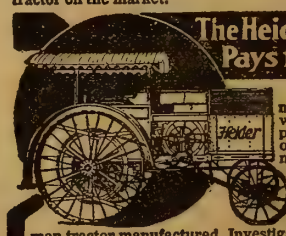
The Heider Tractor Again Leads Them All.

Runs Successfully on Either Gasoline, Motor Spirits or Kerosene

We have solved the fuel problem successfully. A simple device permits the use of either Gasoline, Motor Spirits or Kerosene at all speeds and puts our tractor in a class all by itself. A gallon of kerosene runs the Heider Tractor longer than a gallon of gasoline, and develops the same power, thereby doing the same work at less cost than any other tractor on the market.

HEIDER TRACTOR

The Heider Tractor Pays for Itself.



Its 4-cylinder motor, light weight, great power, simple operation, economical fuel consumption, make it the best, most practical, all-purpose one-man tractor manufactured. Investigate before buying. Write today for free book on Tractor Farming.

CURRENT EVENTS

CONGRESS convened this week in regular session, following the extraordinary session called by President Wilson in April and which was of seven months' duration. The currency bill which passed the house at the special session, but failed to reach a vote in the senate, will come up for early consideration. Within a week or so, however, this bill will be sidetracked for one designed to give the president authority to build a government railroad in Alaska. It has been proposed that the machinery which is being used to dig the Panama Canal and the men who are in charge of the work in the canal zone shall be transferred to Alaska to build a government railroad in order to open up the resources of that, as yet, undeveloped country, and at the same time keep the valuable coal rights and water sites from falling into the hands of private individuals. Following this bill, congress will take up the president's program on conservation and regulation of trusts, so that the regular winter session promises to be a most busy and important one. President Wilson planned to read his message to congress in person, following the precedent which he established upon his inauguration. With the extensive program of the administration, it is many years since the country confronted a session at Washington which bids fair to be so far reaching in importance.

THEODORE ROOSEVELT continues to stir South Americans with his speeches, which are an exposition of the progressive theories. In the course of a speech delivered in Santiago, Chili, a few days ago, the ex-president pointed out the errors into which American courts have fallen lately and the need of curbing big business interests, holding that while all big business is not of necessity bad, the tendency toward monopoly makes government control necessary. In regard to the courts, Colonel Roosevelt said: "During the last half of the nineteenth century the leaders of reaction in the United States, political and financial alike, gradually grew to recognize in the judiciary their most powerful potential ally. There was very little actual corruption on the bench; on the contrary, our judges have been, on the whole, both able and upright public servants, standing on a level probably higher than that of any other civil servants of the government. As long as they confine themselves to the exercise of judicial functions they perform their duties at least as well as, probably better, than other public servants perform theirs. But their whole training, and the aloofness of their disposition on the bench, prevent their having, as a rule, any real knowledge of, or understanding sympathy with, the lives and needs of the ordinary hard-working toiler." Colonel Roosevelt pleaded for the judicial recall, the initiative and the referendum, holding that the people should have the first word and the last word on all important subjects of making and executing laws. The Roosevelt speeches in South America are being used as progressive campaign material and are being given widespread publicity in this country.

REBEL victories continue in Mexico, with good prospects of the early downfall of the Huerta administration. The bulk of the rebels' campaign has thus far been conducted in the northern states adjacent to the boundary line, but their victories have been so decisive as to give them the moral encouragement which augurs well for the future. General Huerta continues to hold the reins of government in Mexico City, but many of the newspaper correspondents are boldly insinuating that he is drinking to excess and that his administration is tottering. The Mexican ruler shows no intention thus far, however, of acceding to President Wilson's demand and President Wilson seems willing to let matters run their course, content that the failure of Mexico to float the necessary loan in Europe, together with the repeated victories of the rebels, will shortly bring about the downfall of a man who seized his office through treachery and murder.

WHY JOIN A FARMERS' CLUB?

Every farmer should be a member of a farmers' club. This is especially true of small farmers—those managing from a quarter section to a half section farm—the sort of farmers that will survive when the last bonanza farmer goes out of the farming business.

Farmers have need of consultation. The farmers' club affords this opportunity. The wives and grown-up children of farmers also should join these clubs and participate in their deliberations. In this way a genuine community spirit can be organized that will inject new life and interest in the rural home and in up-to-date farm management.

The chief objection to rural life—its isolation—can thus be removed, and its many hitherto undeveloped advantages enjoyed. Moreover, plans for co-operation in buying and selling as well as in harvesting and threshing can be worked out at these club meetings to the general advantage of the farming community.

There is always something to be learned from the experience of one's neighbor, and to learn is the same as to grow. But where there is no growth, there is decay.

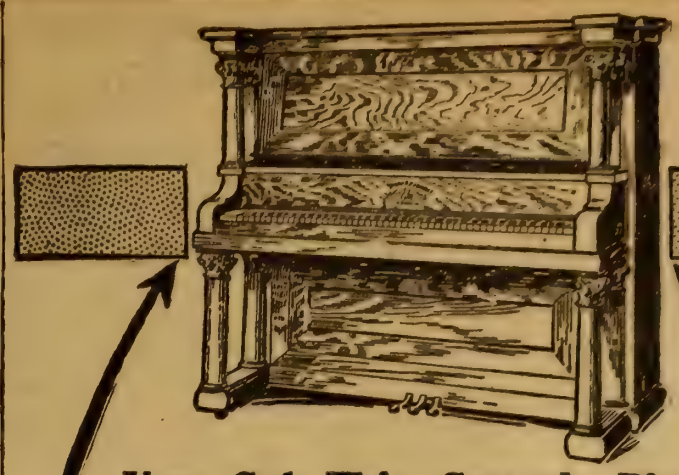
Then the young people yearn for companionship. They are entitled to it. If the farmers' club does not provide healthful companionship, they will go elsewhere to obtain it, oftentimes where it is not so morally healthful.

Farmers must get into the habit of co-operation. Large sums of money can be made as well as saved by co-operating in buying and selling. The farmers' club is a good place to meet and talk things over, to get better acquainted, and to give children a pleasant afternoon in summer time, or an evening during the winter season.

If every farming community had a social center, the boys and girls would form a better opinion of farm life, and when their parents are too old to manage their farms, the children will take their burdens off their shoulders and remain on the homestead.

By all means organize farmers' clubs.—[President Worst, of North Dakota Agricultural College.

Advices from England with reference to tuberculosis bring forward the alarming statement that the number of herds of dairy cattle in England and Scotland which are free from tuberculosis are practically negligible.



You Get This Superb Piano

By Our Wonderful **New Plan** Without You Paying One Penny!

"Hear That Tone" Praised by So Many Western Colleges

Bethany Ladies' College, Mankato, Minn. Fuehr & Stemmer Piano Company. Gentlemen: Students and teachers are more than pleased with the pianos. We find them equal to the finest. W. F. Georg, Pres.

St. John's College, Winfield, Kans. Fuehr & Stemmer Piano Company. Gentlemen: We are very well pleased with the pianos. Critics express themselves favorably with their tone. A. W. Meyer, Pres.

Carthage College, Carthage, Ill. Fuehr & Stemmer Piano Company. Gentleman: We are all much pleased with your pianos. H. D. Hoover, Pres.

We won't expect a cent until you are completely satisfied it is the piano you've dreamed of. The new plan sweeps aside all obstacles between you and the ownership of a magnificent piano. You'll be astonished at the simplicity of this plan. You'll be delighted at how easy it makes you the happy owner of a wonderful piano.

Open to Only a Few Music Lovers First Applicants Given Preference

This New Plan brings you a genuine Fuehr & Stemmer Piano—in a way you never dreamed of getting a piano—*if you are among the first in your community to apply.* The plan is such that it is simply impossible for us to offer it to everybody.

Just imagine the *pleasure* this splendid instrument will give you. Deep, rich, fervent tone. Smooth, easy action. Superb appearance. The chaste carving in rare woods finished with mirror-like sheen. And the limpid, bell-like notes explain why

This Piano's Popularity is Growing Amazingly In Bremer County, Ia., Alone 250 Are in Use

At one stroke this plan places this piano in your home. Think what joy it will add to the home life. And you *know* your boys and girls will be better satisfied if right at home they have the music they now must seek away from home.

We Take Care of the Freight Rates

for those few who are first in each community to make application. It is only a matter of days until you'll be in possession of your instrument, *if you are prompt enough to get in on this offer!*

You who are sincerely desirous of owning a piano *cannot—must not* miss this chance. *Act now!*

Be One of the Fortunate First in Your Community to Send in Your Application! Clip—Fill Out—and mail Coupon Today

Fuehr & Stemmer Piano Co., 18 E. 24th St., Chicago, Ill.

Send me, at once, details of your New Plan whereby I can secure a genuine Fuehr & Stemmer Piano.

Add 15% to the Weight of Stock

With No Extra Feeding Expense

Here's a tank heater that needs no guardian or nurse. IT RUNS DAY AND NIGHT WITHOUT ATTENTION!

It keeps an unlimited supply of water at the proper temperature for stock. Costs less than half a cent an hour to run in zero weather.

The Makestock-Waymore Safety Tank Heater

Just fill the tank with the cheapest kerosene, start it, forget it! It absolutely runs itself. Wind, rain, sleet or snow can't stop it. Makes no dirt. No sparks, no fire risk. Prevents cement tanks from cracking.

A Money-Maker for Stock Raisers

Install the "Makestock-Waymore" and pay us out of the money you are now losing by letting your stock drink ice-water. This will leave you a big extra profit on the increased weight of your stock.

Write at Once! Cold weather is right here. Every day's delay sets you back. Write NOW for full particulars. Address

Positive Supply Co., 405 Rock Island Street, Davenport, Iowa

The **Marlin** Model 1897 **Repeating Rifle**

Shoots all .22 short, .22 long and .22 long-rifle cartridges; excellent for rabbits, squirrels, hawks, crows, foxes and all small game and target work up to 200 yards.

Here's the best-made .22 rifle in the world!

It's a take-down, convenient to carry and clean. The [illegible] steel working parts cannot wear out. Its Ivory Bead and Rocky Mountain sights are the best set ever furnished on any .22. Has lever action—like a big game rifle; has solid top and side ejection for safety and rapid accurate firing. Beautiful case-hardened finish and superb build and balance. Price, round barrel, $14.50; octagon, $16.00. ¶ Model 1892, similar, but not take-down, prices, $12.15 up.

Learn more about all Marlin repeaters. Send 3 stamps postage for the 128-page Marlin catalog. *The Marlin Firearms Co.*, 135 Willow St., New Haven, Conn.

Forerunners of the Plow.

By Rex Croasdell.

AT FIRST glance there seems but little connection between our western farm lands and the history of the gallant gentlemen of France who sailed from the court of King Louis in search of Cipango and Cathay in the seventeenth century.

But the Frenchman has been the land-looker for all of us; if it were not for La Salle, Du Lhut, Pere Marquette and their confreres, we would probably not be raising corn and Poland Chinas here today. The Saxon has been the conqueror and colonizer, but the Frenchman has laughed and traded and sung the songs of Old France in farther places; and after him has come the man of the plow and the reaper.

It is easy to spread wide a map today and decide there is nothing remarkable about the rise of great cities. But La Salle, in the closing years of the seventeenth century, stood on the site of Chicago and exclaimed with all the prophet's fire: "Here will be the gate of empire and the seat of commerce." And he was not the first there. Father Marquette, bent on pursuing the Mississippi to its mouth in the Gulf, had wintered 1674-5 on the south bank of the Chicago river. A tablet in a lumber yard marks the spot of his ancient cabin today. How many in Chicago, walking La Salle street today, know anything about the gallant man it was named for? The French also had a sort of trading post there during the eighteenth century. The first American settler reached the place in 1803. His name is given as Peter Kinzie and he is said to have purchased a house that had been built by a negro from San Domingo. In the days of La Salle the lake front was an uninviting, uninspiring stretch of bog. But he knew the advantages of location and surrounding territory.

Duluth is rather an odd name. There does not appear to be any local reason why Duluth should be called Duluth. But there is. The site of the thriving port of Lake Superior was determined by a French explorer, or adventurous gentleman, if you will. His name was Daniel Greyloson Du Lhut, or Duluth, who visited the head of Lake Superior also in the latter part of the seventeenth century. Born in France, and said to be of noble descent, Duluth, in the time of Frontenac of New France, became a leader of the coureurs de bois, or trading boatmen. It was while following that thrilling vocation that he visited the great inland sea and explored the upper reaches of the Mississippi. And in addition to deciding for posterity that Duluth was a logical site for a great city, he built a trading post on the Kaministiqua where it empties into the lake, where the cities of Port Arthur and Fort William, twin monuments to his prevision, now stand.

Simon Dawson, a civil engineer, is supposed by many Canadians to have been the discoverer of the "Dawson Route"—that magnificent canoe course through the Quetico park and Rainy Lake districts to the Lake of the Woods and Winnipeg. But La Verendrye was one hundred and thirty years ahead of him. And there were two Frenchmen ahead of Verendrye, who returned to Quebec with sixty-odd canoe loads of furs after a winter spent in the lake country. Five or six years after Duluth had built his fort at the mouth of the Kaministiqua Jacques de Noyon reached Rainy Lake and wintered there where the Rainy river empties into the Lake of the Woods. Incidentally, one of the Verendryes was the first white man to see the Rocky Mountains. That was on New Year's Day, 1743, and marked the culmination of a trading trip, with the Pacific as its objective, which was commenced in 1731. Their way was laid by the waterways connecting Rainy Lake and the Lake of the Woods with Lake Winnipeg; the Red river, the Assiniboine river, and in 1739 by way of Lake Manitoba and Lake Winnipegosis to the Saskatchewan.

The Dawson route was followed by Wolseley when he led his men west to suppress the Riel rebellion. Dawson would not go so far as to say that a railway was necessary to enable the people of Fort Gerry, the Red river and the West to do their shopping in the cities of Eastern Canada. In fact, he believed that a railway would not be operative in the winter any more than the waterways would be. So he recommended the spending, first of all, of $165,000 on the improvement of the route, building better portages and providing locks. But no one could possibly have given more glowing testimony to the splendid scenic qualities of the section.

Today there are three lines of steel linking Winnipeg with the East. In fact, the Canadian Northern follows with its rails the route that Dawson traveled and continues west along the valley of the Saskatchewan where Verendrye went in 1729. What a comparison is there today between the laborious tugging over mossy portages of a few hundredweight of goods along the imperishable "Dawson Route," or down the Saskatchewan and its connecting waters, and a sixty-car train of wheat rolling smoothly to the ships at Port Arthur and the sea! The Canadian Northern has very largely preempted this territory enclosed within the scope of Verendrye's journey. Whether its builders were influenced by a perusal of the early voyages of the coureurs de bois or by the fact that the river valleys and lake lands made possible the securing of almost perfect grades to the Pacific is not known. Or it may have been a little of both. Or it may have been the result of the reports of that railroad's locating engineers on the potentialities of the great mixed-farming districts of the Saskatchewan valley. In any event the decision has worked out to the ultimate advantage of the Canadian Northern, for the greatest permanent farming development in western Canada is taking place today, along its main and northern branch lines between Winnipeg and Edmonton. The magnificent canoe routes are for the delight of the summer tourist.

And now the pioneering instinct of the French Canadian has taken him north, beyond Edmonton into the great fertile valley of Peace river. There is some subtle, distinct method of communication among his people. When he makes a "strike" the news always seems to reach his own folk first. It is like the discovery of a new mining camp in that respect. The first intimation of a movement of French-Canadians comes only when a body so large as to attract general attention departs to the new location. The word seems to have gone out that the Valley of the Peace is a highly-favored land, because families and whole communities have moved thither, according to authentic reports. It was only recently that the newspapers of this country carried the strange story of a town in New England being practically depopulated over night. The French-Canadian inhabitants had gone to the Peace river. The fact was not disclosed until the trek began. In this they were giving expression to their dominant characteristic. They never disclose their intentions; neither do they give publicity to their successes, but it is usually profitable for the outsider to follow the lead of the pioneering French-Canadian when he seeks out new territory in strength; his outstanding qualities make him an excellent farmer. His genius as a woodsman and his patience and perseverance stand him in good stead. He can build him a home quickly and knows the secrets of how to make old mother earth give to him of her increase.

From the information that has been gathered of his new habitat, he has chosen a splendid country. The land is remarkably fertile. There are big stretches of prairie at unexpected points throughout the Grande Prairie and Peace valley districts. The climate is mild, owing to the warm

DON'T BURY YOUR PROFITS!

Worms Cause 90% of ALL Hog Losses

Nine times out of ten cholera has nothing to do with your hog losses—it's worms—great, big, thorn-headed intestinal worms, that absorb practically all the nourishment from the food the hogs eat, weakening them so that it's no wonder they're easy victims of **any** swine disease or die from sheer starvation.

I'll Rid Your Hogs of Worms

Practically all hogs have worms from the time they are weaned. You can prove this to your own satisfaction by feeding **Columbian Stock Powders** to hogs of any age—inside of twelve hours you will **see** the dead worms that have been expelled. **Columbian Stock Powder** is not a food—but a **highly efficient, medicated preparation**—a cathartic and vermifuge, that not only positively **kills** but also **expels** all stomach tape, and intestinal worms, and keeps your hogs in fine, healthy condition—on their feed all the time, making every ounce count—growing and fattening for quick big profits with least expense.

Columbian Stock Powders are the **original** stock powders. They have been on the market for the past 25 years and all that time have been recognized as the **best**—the **standard** powders by the largest, most progressive stock raisers of the country. They will speedily put an end to all digestive, assimilative troubles in hogs, horses and sheep.

A Personal Word to You

Every man has at least one ambition—mine is to be able to end for all time, the tremendous, annual hog losses sustained by American farmers—to help hog raisers rear two hogs where one was reared before. The highest tribute to my life's work will be when a million hog raisers shall say: "He showed us how to raise healthy, profitable hogs and eliminate the tremendous hazard." Write for my Hog Book—It's FREE.

Best Conditioner For Brood Sows

Keeps sows in finest condition, strong, healthy, free from fever and insures an abundant flow of milk. Feeding **Columbian Stock Powder** means strong, thrifty litters.

"I Know of No One Who Has Lost Hogs After Feeding Columbian Powders" "I have fed Columbian Powders fifteen years. The past six months have proven to me more than ever the importance of feeding Columbian Powders as a preventive. While Hog Cholera and Swine Plague have raged, sweeping the herds, I know of no man who has lost his hogs after properly feeding Columbian Powders." Yours truly, O. M. HEALY, Bedford, Ia.

Columbian Self Feeder

Regular price is $5.00, but if you will write or mail coupon, at once, we will tell you how to get one FREE

TRY COLUMBIAN POWDERS FOR 90 DAYS BEFORE YOU PAY A CENT I want to prove to you that **Columbian Stock Powders** are the quickest, surest and biggest profit makers you ever tried. Just mail coupon, and I'll make you a free trial offer that gives you 90 days before paying a cent.

Be sure to mail coupon today for my 90 Days' Free Trial Offer.

Columbian Stock Dip For scab, mange, lice, ticks and parasitic skin diseases of horses, cattle, sheep dogs and poultry. The best Dip at the very lowest price ever offered to stock raisers. Highly concentrated.

AGENTS WANTED I want a few good responsible farmers of ability to represent me in every community. Big money for the right men. Write for full particulars.

At present I am feeding.....Hogs;.....Cattle;.....Horses;.....Sheep. Also send me, free, a copy of your book, "Make More Money On Your Live Stock," and particulars as to how to get a Columbian Self Feeder FREE.

Name.....

Address.....

winds that filter through the mountain passes. It is a splendid country for stock raising and should prove to be a great mixed-farming center, in the years to come. Even so soon there are many well-built communities. These are shown on a map of the country produced by the Canadian Northern Railway, which has constructed a branch from Edmonton north to Athabasca Landing. From that growing distributing point regular steamboats ply on the rivers to Lesser Slave lake and beyond, making the approach to the settlements a comparatively easy and simple matter.

Surveyors of the Dominion government have been over the land and the various federal land offices are ready now with all information bearing on the free 160-acre homesteads, and how to reach them. And the Canadian Northern has offices in the United States and Great Britain and agents who will answer accurately all inquiries. From the strength of the tide of settlers moving that way it would appear that the Peace river valley is rapidly taking a strong position among homeseekers the world over.

No one knows definitely the natural resources of the district. It is common knowledge that natural gas is spread over the region fairly well. In fact, there is a great "beacon" burning constantly north of Athabasca landing that has been blazing for many years with undiminished vigor. Prospectors and promoters who have been through during the last year hint of great oil deposits crude asphaltum—the oil that is driving more and more of the big vessels of the world's navies and which is coming into high favor with steamship companies. They talk of great iron deposits, silica sand for plate glass manufacturing, marl, asphalt, and many other things. Men who ought to know say there is enough gypsum in the country to make plaster of Paris for a continent. They speak of ochre that mixes perfectly with water and holds its color for years. And it is said to be the stamping grounds of the last wild wood buffalo.

It would really appear as if the genius of the Frenchman for locating desirable country has been vindicated again, in the Peace river country, as that of La Salle and Duluth has been endorsed in the growth of Chicago, Duluth and the farming territory on the Mississippi valley, with the passage of the years and the spread of settlement.

"Legging Up" Our Farm Horses.

By Frank R. Shaw.

IN A LATE issue of your paper I read an article under the heading, "Wintering of Horses." Had I believed that the writer simply wished to describe a method of caring for his horses through the winter, so as to bring them out in the spring carrying a fair degree of flesh, I simply should have read the article with interest, and favorable personal comment (if any) and thought no more of it. But on second reading I was impressed with the fact that horses when at all carefully wintered receive this care for a purpose, and that is that they may be better fitted for the strenuous work days which are to follow. With this thought I felt that the writer of the article had not gone far enough, and I am prompted to recall the many days and weeks of hard, tiring work which follow the winter of comparative idleness, and see if it is not possible to bring our best friend and co-worker through the winter not only in fair flesh, but fully equipped for the heart-breaking tasks before him by simple yet needed preparation while he is being wintered.

The earliest of these on most farms is breaking cornstalks or cutting them with the tiring process (for the horse) of walking all day through a tangled mass of stalks. Then comes the plowing or listing, followed by harrowing if ground has been plowed. But what is the use of enumerating? We all know the routine full well, and are thoroughly familiar with the tired leg-weary, spirit-dampened team with which we returned home after doing what we considered only a fair day's work.

At this juncture I wish to add to the "Wintering of Horses" something in addition to the feeding and stabling. A proven method which, if adopted, will bring pleasing returns in a greater quantity of labor, well and comfortably performed. This addition can be summed up in the one word—exercise. Why do our horses seem so "soft" (to use a time-worn word) and incapable of doing a hard day's work in the early spring days? It is simply because they have not been "legged up" to it. To explain this expression will say that many years ago I attended a race meeting with my father. A friend of ours had a young horse in one of the races of which much was expected. This horse won the first heat, but later was distanced. The driver in talking to my father in explaining why he lost, stated that his horse was not yet "legged up" to a race. It was the first time I had heard the expression and I asked the driver its meaning. I was told that it simply meant that his horse had not had exercise, or work enough to accustom the muscles of his legs to do the work and go the required distance without tiring; this explanation made a lasting impression, and one that has done me an incalculable amount of good in wintering horses. I talked with my father about this "legging up" process. He smiled and said that in losing a race some excuse was usually presented and he supposed this was as good as any other. I, however, took a different view at that particular time, and determined to keep track of our friend's horse and see what he would do later on. The results fully justified the driver. In his second and third races he made a better showing, but did not win. From that time on this horse did not lose a race during the entire season. This showing was pleasingly interesting to me, and was only further proof that the driver knew his horse and what ailed him in that first race.

I am wondering at this time how many of our farmers give their horses the needed amount of exercise to have them properly fitted for the hard work of the early spring. We can learn valuable lessons in this connection from the driver and developers of our trotting and pacing horses. Daily short drives through the entire winter are given. As spring approaches the drives are lengthened and the speed (their work) increased, all to the end that their horses will be in the best possible condition, from any angle where he is required to put forth his best effort in a race.

If we are to receive full returns for wintering our horses in comparative idleness, we should have them in condition to do a long, hard day's work from the first day we can get into our field, and systematic exercising is the only treatment which will put them in that condition. Personally, I would, if needed, sacrifice a little of feed and grooming rather than omit the daily exercise, if I wished to feel that I was treating my horses humanely and wintering them as I should, preparatory to the work I had to do with them later on. It requires very little time to hitch a team of horses, take the second team with you either by tying behind the wagon or beside the horses you have hitched; walk them on the road a few miles and jog them home. Often in making a needed trip to town this work can be done. Let this exercising become a part of the boy's work as well, for it is seldom that you will find a boy on the farm who does not like to ride or drive the horses. Begin this exercising or "legging up" process fully six weeks (two months is better) before you expect to start your spring work. When this begins you will be amply repaid in the increased amount of work your teams will perform and the pleasure you will derive from working them when they are as hard as nails. Let me advise from a humane standpoint if from no other, that you add exercise to your hay, grain growing and stabling in wintering horses. In actual practice, I have taken a team worked lightly through the winter, doing some work every

Straight Talk on Plows—No. 1

What is the most vital feature of a Plow? Have you ever stopped to consider this question? What makes a plow run light? Most riding plows are built along similar lines. They look much alike and in a general way operate alike, but there is a great difference between them.

The one vital point is the SHARE, just as the vital part of a razor is the blade. When new, all plow shares are sharp and they do good work. The real test comes after the first sharpness has worn off, and the share has been re-sharpened.

There is but one Plow Share in the world that can be successfully re-tempered after it has been re-sharpened, and that is the

ACME STEEL SHARE

An Acme Share can be re-tempered any number of times by the farmer himself. Kept as hard and sharp as new, with a positive guarantee that it will not break, that it will scour as well as any share in the world. Other shares of an equal price cannot be re-tempered and are soft and quickly become dull after the first sharpening.

Showing a Farmer sharpening and re-tempering his ACME Share at home.

Acme Shares retain their hard, sharp, keen cutting edge as well after re-tempering any number of times as other shares do when new. What does this mean to the Farmer? Sharp shares mean light draft, easy plowing, faster plowing, better plowing and less wear and tear to horse flesh.

Acme Guaranteed Shares are used on but one line of plows—**Moline** Plows. They can be secured from no other source.

BEST EVER Sulky and Gang Plows Have ACME Steel Shares

The **Best Ever Plow** is the best plow that money and skill can build. Convenient, easy to handle, light draft, with no side draft. Ask your Dealer of "Flying Dutchman" Farm Tools for the "Best Ever" and "Acme Shares."

Free Booklet. Write us today.

Clean Water at Right Temperature In Cold Weather Means Healthy Hogs

Hogs won't drink as much as they should if given cold water. When they are forced to drink it they shiver away the fat you have built with costly feed. Their whole system is chilled. They will be healthier and put on more weight with less feed if given water with the chill off. Give them a constant supply of good water.

Ideal Hog Waterer *Will Not Freeze in Coldest Weather*

Keeps water at just right temperature even on below-zero days. Water ready night and day. Heavy galvanized steel tank. Protected trough—clean and sanitary. Simple. Practical. Inexpensive to operate. Automatic feed. Write for free literature.

CARROLL HIDE & FUR CO., Carroll, Iowa

day, and weighing 3,100 pounds when starting spring work, three months later they weighed 2,990 pounds or a shrinkage of 110 pounds. A second team doing practically nothing all winter excepting to run in a yard during the day when weather was pleasant and being led to town some eight miles to have their feet trimmed, weighed, on starting work, 3,240 pounds. After three months' work, weighed 2,910 pounds, a shrink of 330 pounds. This second team did not do nearly as much work as the first, and were favored in all the work they performed. The age, breeding and quality of these four horses was practically the same, and they all had the same feed and general care, excepting the exercise, "legging up throughout the winter. At no time for the first two months could the second team, which were not exercised, perform to exceed three-fourths the work of the team which had been in harness every day during the winter. Then, too, the second team required more care, as they came in at night with the sweat and dust crusted on them requiring extra cleaning; their shoulders and collars had to be watched carefully, while the other team came in cool and clean, and when brushed off, it would be hard to believe that they had done a long, hard day's work. Try "legging up" your horses this winter and spring particularly, and let us know later through this paper if you ever have done anything which brought you in more satisfactory results in labor pleasantly performed, and in satisfying knowledge that if an extremely hard day's work was required of your team that they were fit, all conditioned for the task.

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

COLLECTION OF NOTE IN KANSAS.

A Subscriber, Iowa City, Iowa.—I have in my possession a promissory note dated June 10, 1910, bearing interest at the rate of 6 per cent, given by a party residing in Kansas. The note has never been renewed, and no interest has ever been paid on it. Can I collect the note by law?

Answer.—If the maker of the note is financially responsible you can collect the note by law. A promissory note is not outlawed in Kansas till five years after it is due. Therefore you can sue on the note in Kansas where the maker lives, and get judgment at any time within five years after it is due.

COMMISSION FOR SELLING FARM.

Mr. C. M. B., Atlantic, Iowa.—A is in the real estate business, selling land on commission. B wished to buy a farm in a certain neighborhood, and C owns much land in said neighborhood. A informed C that B wanted to buy a farm and asked C if he had any to sell him in that vicinity, and C said he had a certain farm he would sell B, so A and B arranged to go and see it. Just before the time fixed for this, A got hurt and was not able to go, but he told B to go ahead and buy the farm from C. Thereupon B went to C's house and bought from him another farm. C now claims that he does not owe A any commission, because B did not buy the farm listed by A for sale, but another farm. On the other hand, A claims that B was his customer, and that he brought him to C, when A might have sold him some other farm. Can A recover commission from C?

Answer.—We are of opinion that A cannot by law recover commission from C for the farm actually sold to B, because there was no contract between A and C about selling that farm. It was not listed with A for sale. A became the agent of C to sell a particular farm, which was not sold. For these reasons A cannot recover commission.

RIGHT TO CONVEY LAND.

Mr. J. O. Michaelson, Sioux Rapids, Iowa.—A owns a farm in Iowa. His wife is dead, and all his children are under age. Can he sell the farm to B, and give him good, clear title by warranty deed?

Answer.—He can. He can convey to B a clear title, if he has a clear title himself. His children do not affect the matter at all, as they have no interest whatever in the farm.

MORTGAGE—SUIT FOR THE DEBT.

A Subscriber, Orella, Neb.—A bought a wagon and gave his promissory notes for the price of it and a mortgage on the wagon to secure payment. If the company that sold the wagon sues A on the notes does that have the effect of canceling the mortgage?

Answer.—It does not. The company does not waive the mortgage nor cancel it by suing on the notes.

TIGHT PARTITION FENCE.

An Iowa Subscriber.—My neighbor has made hog-tight his half of the partition fence between our lands, fifty rods of it being woven wire and the other thirty rods of it being barbed wire fencing. The barbed wire part of his fence is along a field used by him for hog pasture. He does not turn horses in this pasture but I turn horses in my field against this fence. Can my neighbor compel me to make my part of the partition fence tight, until he removes the thirty rods of barbed wire and replaces it with woven wire?

Answer.—He cannot. Before he can compel you to make your part hog tight he must make his part tight as follows, either twenty-four inch woven wire on the bottom, with three strands of barbed wire on top, or eighteen-inch woven wire on the bottom, with four strands of barbed wire on top, or woven wire not less than forty-eight, nor more than fifty-four inches, without barbed wire. In either case the fence must be not less than forty-eight nor more than fifty-four inches high.

MANURE ON RENTED PREMISES.

Mr. Henry Bolling, Central City, Neb.—A rented a farm from B. Nothing was said in the lease about manure. Has A a right to sell or give away manure accumulating on the premises during his tenancy?

Answer.—He has no right to do so.

REPLEVIN SUIT.

A Subscriber, Iowa.—A has possession of a shoat which belongs to B, and A refuses to give it up, claiming it is his property. B knows the shoat perfectly well, because it was a pet, and the only shoat he had. B went to A's hog yard and called to the shoat as he had often done before, and it came at once to him, while all of A's shoats ran away. What legal steps must B take to recover the shoat?

Answer.—B should bring a suit of replevin against A, in justice court, claiming the shoat and damages for its detention, and if he can prove the facts above stated, he will have no trouble in getting judgment for the possession of the shoat, and also damages.

PARENT'S DEEDS TO CHILDREN.

A Kansas Subscriber.—My father has twelve children. To nine of these children he has deeded eighty acres of land each, and has given nothing to the other three. He has made no will. Can the three children get a share of the deeded land when their father dies?

Answer.—If when your father made deeds to his nine children, he was of sound mind, and was not induced to make said deeds by either force or fraud, the three children cannot get any share in the deeded land at their father's death, but if said deeds or any of them were obtained by force, or fraudulent means, they can be set aside in court, and the land such deeds cover will be divided equally among all the children.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

STORING VEGETABLES.

To the Editor of The Homestead:

There are some farmers who have no cellars in which to store vegetables for winter. To these some methods of storing vegetables in the ground may be interesting. Then many farmers who have cellars prefer to store vegetables in the ground as they do not dry out and become tasteless. Of course if a cellar is a little damp and not too warm it will keep vegetables very satisfactorily if vegetables are put in crates and kept off the damp floors.

I store my cabbage by digging a long trench with shovel or plow about six inches deep and two feet wide. Then I set the cabbage in the trench with heads down and in pairs. then throw over them a light covering of straw or grass and cover to the depth of two inches with dirt. The roots are left protruding from the ground. If the weather is extra cold I may throw over them another inch of dirt. It does not hurt cabbage to freeze if they are kept covered until they thaw out.

Most farmers round up the potatoes in a cone like shape, throw straw over them and cover with a light covering of soil, then pile manure over the mound to keep from freezing. One must remember that potatoes cannot stand a freeze. One year I put my potatoes in a big box, after burying it in the ground. I put a lid over and threw on a covering of leaves and piled the dirt over and about it. When the weather became cold I threw some straw on the mound and covered it with a light coat of manure from the barn. The potatoes were in first-class condition when removed from the box. Turnips can be kept in the same manner as potatoes, only it does not hurt a turnip to freeze if allowed to thaw out under ground.

Onions may be kept by burying them in boxes below the freezing point. One of my neighbors kept a wagon load of onions under a straw rick all winter. In the spring of the year he was hauling them to town and they looked fresh and fine. Subscriber.

A BOOK ON SOILS AND CROPS.

Under the above title there has just come from the press a book by Professors Thomas F. Hunt and Charles W. Burkett, and we have the privilege of examining one of the first volumes. This book is designed for two purposes, namely, to meet the requirements of the class room in the lower as well as the higher grades of schools and colleges, and secondly, to satisfy the needs of those who are dealing directly with soils and crops, namely, the farmer. The following chapter headings give a fairly clear idea of the character of this volume: Food Required to Grow Plants; How Soils Are Named; Characteristics of Soil; Why Fertilizers Are Required; How to Purchase Commercial Fertilizers; Use of Lime on the Land; Farm Manures; Green Manures; What Fertilizers to Use; Air and Water; Drainage; Irrigation; Plowing; Tillage; Harvest; What Plants Are; How Plants Live; Propagation of Plants; Insects; Diseases of Plants; Rotation of Crops; The Corn Plant; The Culture of Corn; Oats; The Wheat Plant; Culture of Wheat; Process of Breadmaking; Barley; Sorghum and Millet; Rice; Characteristics of Perennial Forage Grasses; Culture of Perennial Forage Grasses; Varieties of Perennial Forage Grasses; Legumes; Clovers; Alfalfa; Legumes for Seed; Beans; Peas and Peanuts; Cowpeas and Soy Beans; The Sweet Potato; Potatoes; Roots; The Cabbage Tribe; Fibers; The Cotton Plant; Culture of Cotton; Weeds; Improvement of Crops and Choice of Crops.

Arrangements have been made whereby this paper can accommodate its readers by furnishing this volume at the regular publisher's price, namely, $1.50.

Let Me Help You Get Winter Eggs

GILBERT HESS, Dr. of Medicine, Dr. of Veterinary Science.

I make my biggest egg profits in the winter months, because I see to it that my own hens lay regularly then. You can make your hens lay in winter the same as mine do.

Under ordinary winter conditions hens lay poorly, because they are cooped up, deprived of green stuff and cannot get exercise. The egg organs consequently become sluggish and inactive and the hen puts on fat instead of converting her ration into eggs. Hens must have a tonic during winter to tone them up, invigorate the dormant egg organs and keep them healthy.

Dr. Hess Stock Tonic

Your cows, horses and hogs are pretty apt to get out of fix during winter, because grain, hay and fodder do not contain the natural laxatives and tonics so abundantly supplied in grass. Lack of exercise is another thing that retards good health.

Dr. Hess Stock Tonic contains tonics that improve the appetite and tone up the digestion, laxatives for regulating the bowels, and vermifuges that will positively expel worms. I guarantee it. 25-lb. pail $1.60; 100-lb. sack $5.00. Smaller packages as low as 50c. Except in Canada, the far West and the South.

Dr. Hess Instant Louse Killer

Kills lice on poultry and all farm stock. Dust the hens and chicks with it, sprinkle it on the roosts, in the cracks or if kept in the dust bath, the hens will distribute it. Also destroys bugs on cucumber, squash and melon vines, cabbage worms, etc., slugs on rose bushes, etc. Comes in handy sifting-top cans, 1 lb. 25c, 3 lbs. 60c. Except in Canada and the far West. I guarantee it.

Dr. Hess Poultry PAN-A-CE-A

is just such a tonic. It makes hens lay. It contains ingredients for toning up the whole digestive system and enriching the blood. The U. S. Dispensatory and all noted veterinarians certify each ingredient to do what I claim for it. Pan-a-ce-a is a scientific preparation—back of it is my 25 years' experience as a doctor of medicine, veterinary scientist and successful poultry raiser. But I don't want you to try my Pan-a-ce-a on anybody's claim or say so, but on a

Money-Back Guarantee

So sure am I that Dr. Hess Poultry Pan-a-ce-a will make your hens lay during winter, that I have authorized your dealer to supply you with enough to feed your whole flock, and if it does not do as I claim, return the empty packages and get your money back. Pan-a-ce-a is never sold by peddlers, only by reliable dealers whom you know. 1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail $2.50. Except in Canada and the far West. Send for my new poultry book—it's a stunner and it's free.

DR. HESS & CLARK
Ashland, Ohio

Send 2c stamp for my brand-new 32-page poultry book—it's a stunner.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

WHY SOME HENS ARE NOT BETTER.

To the Editor of The Homestead:

In this country we never had so many well-bred hens as we have today. It is not so very long ago that on most of our farms we saw only the most commonplace hens, streaked, black and white, brown and gray and all colors of the rainbow almost, and that too, on the same farm. But today we may see many choice flocks of poultry in going a little way through the farming regions.

Still, there are even yet many flocks that are far from being strictly speaking well-bred. Mixed flocks are the rule rather than choice stock. But some of these everyday hens are doing better work and making more money for their owners than are some well-bred flocks. What is the reason for this?

Have we not all heard it said of some men that "everything they touch turns to gold?" But this does not happen to be so. It is true because of some good reason, and that reason is to be found in most cases in the better way the successful men treat their average hens. Success, in other words, is more a matter of care and good treatment than it is of name or breed of fowl.

Many hens that now bring in little or nothing above the cost of keeping would make their owners rich if they could only have the best of care. Sometimes it seems as if men have had this sounded in their ears until it slips off them and makes no impression; but the man who hears and heeds will surely get good pay for his pains.

You take a flock of ordinary hens and care for and feed them as you would a lot of thoroughbreds and you will be surprised how much better they will do than they used to. How is this to be done?

Begin with the matter of housing. Hens must be comfortable to do well. Not simply to be kept warm, but to be furnished plenty of pure air will work wonders. A stale, dead, foul atmosphere will ruin the prospects for the best flock in the land, no matter how bred.

Then, too, it never pays to try to put too many hens in a house. Many of us are making a grave mistake here. We want to get the most good out of our houses and so we pack the birds in till they are all the time in each other's way. This leads to quarreling, and quarreling spoils the best of stock.

But we may do much by breeding up the stock we have. By taking eggs from the best layers, we may, in a little while, get a lot of chicks that will surprise us by their better service. To help along in this, we may get a good male bird of some neighbor who has gotten a little farther along than we have. If we are too proud to go to a neighbor near home, go to somebody outside the circle of nearby farmers. It will pay excellent returns.

The question of feed must not be overlooked. Pure feed and in quantities to suit the conditions of the flock will never fail to help in making the hens produce better. This is a great study. There must be some grain, some vegetables, some fruit and lots of milk and water, with due regard to grit, meat and bone. These things are essential with every flock in the land.

the demand is ever increasing for this new and now well established strain of fowls.

—By referring to the advertisement of Ethel H. Shaw, Newton, Iowa, on page 14, prices on Mammoth Toulouse geese of either sex may be found.

—E. M. Norton, R. 1, Yale, Iowa, placed an advertisement on this page announcing White Orpington cockerels, White Holland turkeys and Toulouse geese.

—The Progressive Poultry Farm, Hampton, Iowa, advertises Single Rose Comb, Brown Leghorns and Single Comb Buff and White Leghorns on page —.

—On this page of The Homestead appears the advertisement of A. M. Long, Bassett, Neb., offering Barred Plymouth Rock cockerels for sale at very moderate prices.

—Ralph W. Owens, Mt. Pleasant, Iowa, announces on this page that he has for sale choice Partridge Wyandotte cockerels and pullets at reasonable prices.

—Sarah Quire, Lynnville, Iowa, is offering Indian Runner ducks, Mammoth Bronze turkeys and Buff Orpington chickens for sale in her advertisement on this page.

—Rose Comb Brown Leghorn cockerels and pullets from prize-winning stock are offered for sale by Mrs. Nelson Hyde, Manson, Iowa, in her advertisement on this page.

—John M. Hall, Williams, Iowa, is offering forty choice Single Comb White Minorca cockerels for sale at bargain prices if taken soon. His advertisement appears on page 14.

—Mrs. A. Davis, Burlington, Ill., is offering pure-bred Holland turkeys, Pekin ducks and Single Comb Buff Orpington cockerels for sale. Her advertisement will be found on this page.

—Jas. H. Howarth, Moulton, Iowa, has a few well barred, medium dark Barred Plymouth Rock cockerels that he is offering for sale to Homestead readers in his advertisement on this page.

—Under their respective headings on this page appear the advertisements of E. E. Snively, Jefferson, Iowa, in which he is offering for sale Rose Comb Brown Leghorn cockerels and Indian Runner drakes.

—Ethel H. Shaw, Newton, Iowa, can supply Homestead readers with Marmoth White Holland turkeys from Iowa State show winners at prices named in her advertisement that appears on page 14 of The Homestead.

—A. E. Goodman, Indianola, Iowa, is advertising single comb White Orpington cockerels on this page of this paper. They are of the original and most popular strains and are priced at from $1.50 to $5 each.

—R. H. Roberts, Clear Lake, Iowa, in furnishing copy for an advertisement appearing on this page, writes: "I have some fine Buff Plymouth Rocks with extra fine coloring. I have a large flock from which to select birds to supply my customers."

—The advertisement of Geo. Boyce, Newell, Iowa, offering Rose Comb Brown Leghorn cockerels for sale will be found on this page. These cockerels are of early March and April hatch and from strictly pure-bred stock. Mr. Boyce will send out nothing but first-class birds.

—Mrs. Charles T. Peacock, Plattsmouth, Neb., in furnishing copy for advertisement found on this page, writes: "My Rose Comb Brown Leghorns are pure bred and I have always bought stock and eggs so that they would not be related. My birds are of good size and fine layers."

—A. L. Anderson, Indianola, Iowa, has Golden and Silver Laced Wyandottes on which he received numerous premiums in 1913 at the Iowa State Fair. He has stock and eggs for sale in season. For prices and other information write Mr. Anderson after reading his advertisement appearing on this page.

—White Wyandotte chickens and White Holland turkeys, scoring from 90 to 95 points are offered for sale by Mrs. C. S. McLachlin, Gray, Iowa. Birds bred by this lady have won a large number of premiums wherever shown. While she is offering very attractive prices, buyers will do well to send their orders at once and get first choice.

—On page 14 there appears an announcement of Mrs. Wm. H. Nolin, Monroe, Iowa, to the effect that she has for sale a few good early, well-marked Mammoth Bronze turkey toms. These birds are grown from prize-winning stock from the pens of O. C. Bierma and Strater Bros. They are good in every respect. For prices write to the address given.

—White Plymouth Rock cockerels of April hatch are advertised on this page by Mrs. E. C. Turner, Griswold, Iowa. At the Botna Valley Poultry Association Show recently held at Atlantic, Mrs. Turner's birds were awarded second on cock, first on hen, second on hen, first, second, third and fourth on cockerel and third and fourth on pullet. They were judged and scored by Shellabarger. For special prices write to the address named.

—Glen and Mae McLaughlin make a specialty of breeding Silver Wyandotte chickens and advertise them on this page. An old poultry judge, who has been scoring birds from these flocks for the past fourteen years and who has had twenty-four years' experience in judging, says that this flock is one of the finest flocks of Silver Wyandottes in the country. Good cockerels are offered at very low rates. Address Glenn and Mae McLaughlin, R. 5, Manning, Iowa.

WINTER FEEDING OF GROWING ANIMALS.

To the Editor of The Homestead:

Every year there is a large percentage of growing stock brought out in the spring lighter in weight than when they came off the grass in the fall. I do not know why this is so, but it is a fact, nevertheless. I am now speaking of young, growing stock. It is not necessary to carry all the flesh on a dry sow through the winter if she is due to calve next spring.

All immature animals should be kept gaining in weight through the winter. They may not carry their fat through; that is not always profitable; but they should carry their weight through, and more. What they lose in fat they should gain in growth, and make a profitable increase—with steers at least half a pound a day during the winter months. This does not necessarily apply to females, unless they are being grown for beef. If they are being grown for milk, it is not desirable to keep them in too high condition. Excessive fat and prolificacy or fruitfulness, are, to some extent, at least incompatible.

This constant growth of young things in size and flesh through the winter will be gained at the minimum of expense by feeding them a reasonably well-balanced ration, therefore a ration suitable for growth. A well-managed farm supplies this in the clover, and in many places alfalfa, in the corn fodder and the straws of the farm.

Two kinds of feed so widely different as the clovers and the straws should be fed together, not separately. All the straws and corn fodder should be balanced up with feeds that have the muscle-making elements, of which clover and alfalfa are the very best. Corn may be used, but more sparingly than is the ordinary custom. Corn itself does not contain the elements necessary for the proper growth of any kind of young stock.

Keeping immature animals growing is the only way a profit can be obtained from them. One should not, however, make the young stock he intends to put on grass along next spring fat by feeding them corn through the winter. Many have been very much surprised, after feeding their calves and yearling steers an abundance of corn during the winter, to find that they do not do as well on grass in the summer as others that were not so well fed. The reason is obvious. No kind of animal does well when turned from a good ration to a poorer one. There is more or less shock to the system to begin with, and as the animal on grass is not getting fat-forming elements that the corn furnished, it is very likely to go back, at least not to go forward in the same ratio as the animal that has been kept on a flesh-forming ration during the winter and goes right on with a similar ration during the summer.

Young stock should, by all means, be kept growing through the winter and the older cattle or other mature animals be fed a ration that contains the raw material for what they are wanted to produce. If they are to be fattened, then corn should be made the main element of the ration. If growth is desired, corn fodder or clover hay or even millet hay will do better than corn, when feeding with the one idea of growth.

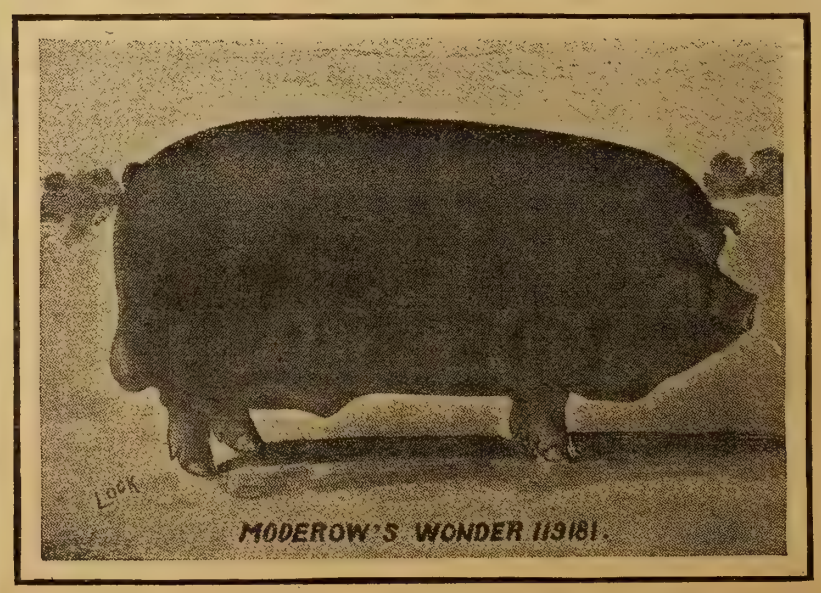
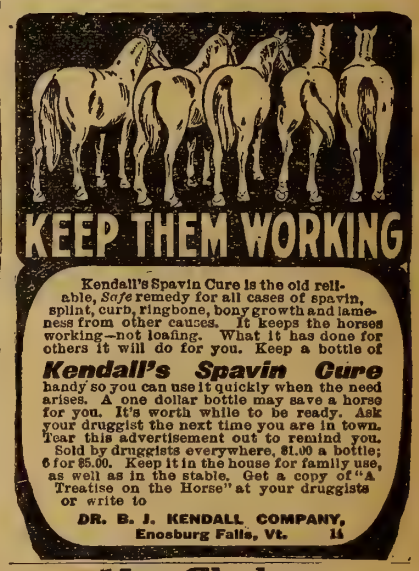
A TRIBUTE TO THE COW.

Little do we realize the debt we owe the cow. During the ages of savagery and barbarism we find her early ancestors natives of the forests of the old world. When the bright rays of civilization penetrated the darkness of that early period and man took up the march of progress he called on the cow and she came forth from her seclusion and proclaimed her willingness to share in the efforts that ultimately developed a great nation. For over two thousand years she has shown her allegiance to man. Sharing alike in his prosperity and adversity, responding nobly to all that was done for her, her development has made her an idol of the people in her native land.

Columbus recognized her merits, for she came with him on his second voyage to America in 1493 and from that time to the present day she has been a potent factor in making this, our own country, the greatest nation with the highest type of womanhood and manhood the world has ever known. Her sons helped till the soil for our ancestors and moved the products of the farm to market. They went with man into the dense forests of the new world, cleared them for homes and made cultivation possible for the coming generation and as the march of emigration turned westward they moved the belongings of the pioneer across the sun-scorched plain and over the great mountain ranges to the new home beyond. The cow is truly man's greatest benefactor. Wind, hail, floods and drouth may come and destroy our crops and banish our hopes, but what is left the cow manufactures into the most nourishing and life-sustaining food and is she not life itself to the thousands of little ones stranded upon the barren bosoms and hollow hearts of a modern motherhood? We love her for her docility, her beauty and her usefulness. Her loyalty has never been weakened and should misfortune overtake us as we become bowed down with the weight of years we know that in the cow we have a friend who was never known to falter. God bless the cow. We little realize the debt we owe her.—[Eugene Bennett, Missouri Dairy Commissioner.



The Duroc Jersey boar shown herewith is that of Moderow's Wonder, one of the great boars in use in the Wm. Moderow herd at Beemer, Neb. See field note on page 26.



Kendall's Spavin Cure is the old reliable, *Safe* remedy for all cases of spavin, splint, curb, ringbone, bony growth and lameness from other causes. It keeps the horses working—not loafing. What it has done for others it will do for you. Keep a bottle of

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

HEALTH OF THE DAIRY HERD.

From an economic point of view, the health of the dairy herd is of vital importance. The heavy milking cow is more subject to disease and injury than any other of the cattle kind. Though the owner does his best to protect the herd, there will be losses by disease and injury and when the herd is not properly cared for, those losses become much greater. Neglect may cause the ruin of an entire herd by disease. The prime factors in keeping a herd healthy are shelter, light, fresh air, pure water, good food and protection from injury and diseased animals. There is a heavy drain on the system of a cow producing a large quantity of milk; and, for this reason, it does not pay to withhold a generous supply of wholesome food.

The most successful herdsmen are those who have trained their eyes to catch quickly any irregularity in a cow's appearance or actions which might indicate disease or injury. Each cow should be looked over daily by the herdsmen and any ailment should be treated immediately. Prompt action frequently saves a cow. For the treatment of diseased cows, a closed stall, or better, a separated building is desirable. This should be so constructed that it can be easily washed and disinfected. There are few herds which do not at some time become infected with some disease which is more or less contagious and should be treated away from the rest of the herd. Every herdsman should be provided with some good book on cattle diseases, for reference, and to familiarize himself with symptoms and treatment. Cases not understood should not be treated unintelligently, but frequently, immediate attention is necessary and there is no time to go for a veterinarian.

Every dairyman who keeps even a small herd will find it convenient to have the following medical equipment: A clinical thermometer should always be at hand and the herdsman should know how to use it. It can be gotten through any drug store or from any firm dealing in veterinary instruments. The normal temperature of mature cows are from 99 to 102 and may reach 103 Fahr. The temperature of your animals frequently ranges from 40 to 50 and respiration (breathing) from 10 to 20 per minute. Two or three milk tubes of different lengths, a trochar and canula, a long neck pint or quart bottle for drenching, a milk fever outfit or a bicycle pump, a large syringe, or funnel, and three feet of small, rubber hose, and one graduate or measuring glass should be provided. Remember, milk tubes should always be sterilized by heat or a disinfectant before using.

The following medicines should be kept on hand: One-pound bottle crystallized carbolic acid, five pounds epsom or glauber salts, one pint castor oil, one gallon linseed oil, creolin, vaseline, carbolized vaseline, acetate of lead (sugar of lead), flowers of sulphur, hydrogen peroxide, one pint tincture of gentian. Dissolve the carbolic acid by placing the bottle in warm water and add a very small amount of water to keep it in solution. Make the carbolized vaseline by adding to a pound of vaseline less than one half ounce of the dissolved carbolic acid, then warm and stir thoroughly while cooling. Other medicines may be added and even needed, but these should always be available.

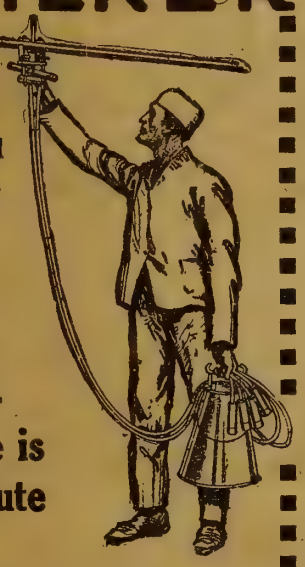
THE HIRED MAN'S INTEREST IN THE COW.

A dairy cow arouses in any man who cares for her a sense of pride and a feeling of personal interest that is not possible with other farm work. On farms where the milk from each cow is weighed and tested, and its value computed, any hired man will take a very keen interest in having his favorites make a creditable showing. One successful dairy man relates a story, of how one time after the noonday meal a discussion was started as to the probability of a Guernsey heifer in the herd making a record equal to another that was getting a great deal of publicity in regard to her production. Quietly he said the hired man left the room. When the owner went to the barn at the time to start the afternoon's work the hired man was found currying the favorite. Could that hired man be trusted to milk that cow? Could he be depended on to look after her needs carefully? Every reader will answer in the affirmative. Let us look to the reasons for it. The cow was worthy of respect, attention and appreciation. The hired man had been allowed, if not actually induced, to take personal interest and pride in the yield of that cow. He was equally appreciative as the owner in her records.

One of America's greatest economic students recently said, "The labor problem in America must be solved by some sort of profit sharing whereby the laborer will obtain a portion of the proceeds according to his ability to produce." Is not that true of the dairy? Is it not a fact that the matter of feeling a pride and a personal interest in the dairy is a great and important factor? Every man whether farm owner or hired man feels proud of any work well done.

What is believed to be a record breaker for the largest load of oats ever hauled to Creston, Ia., by the farmers of the surrounding country was weighed over the scales at the Treanor & Girard coal, grain and implement office. The load of oats was brought in by W. J. Woods, who resides on the old Davenport farm just southeast of Creston, and contained 173.24 bushels. Mr. Woods hauled to the Treanor & Girard establishment on that day in all, 1,053 bushels. Each load hauled was larger than the one before, excepting the last load, and it is thought that all that kept Mr. Woods from putting on 200 bushels was that he ran out of material. The first load contained eighty-nine bushels, and the others in their order as follows: 112, 120, 125, 155, 173 and 117.

SHARPLES MILKER



If you know the users your confidence is absolute

America's shrewdest dairymen use over 6000 Sharples Milkers.

A good example is Hershey, the great chocolate man. He put a Sharples Milker in one of his many dairy barns and tried it out. Then in another barn and another and another, and he now milks twenty-one herds with the Sharples Milker.

Another user is Stephen Francisco, father of certified milk, and the livest wire on sanitary methods in the United States.

A small locality in Southern New York uses over 70 Sharples Milkers—the Province of Ontario milks 2500 cows with the Sharples and many thousands of machines are used throughout the continent.

An average operator milks thirty cows per hour, some milk forty, but we say thirty to be conservative.

It saves money, relieves the help problem nightmare, and insures more and cleaner milk by making healthier, better cows.

The Milker book is good. Send for it.

Let Me Send YOU My Wonderful New Galloway Sanitary Separator On 90 Days' TRIAL FREE

● I'm not asking you to buy it, understand that? I'm not asking you to buy this separator or even promise to buy it. I simply want to send it to you so that you can test it out right on your own farm free. I know what this separator of mine is. I know what it will do. I know that there isn't another separator in the world at any price that is even in the same class with it. I know these things because I have found them out by an actual, personal investigation of the separator itself right on my own modern dairy farm.

Why! when my own experts came to me and told me the results of their final tests on this machine on which they had been working for three years I'll confess I didn't think such things were possible. Now, after testing the separator itself, I know that they were justified a hundred times over in every claim made.

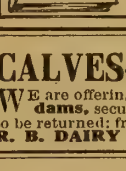
Now, I want to give you exactly the same chance I had. I want you to take this separator to your farm and test it in every way you can think of. Then, at the end of the free trial, if you can't honestly say: "Galloway, I wouldn't be without the machine you sent me at any price"... then just ship it back to me. I'll pay the freight both ways—the free trial won't cost you a single cent.

Save $25 to $50 on the First Cost Alone

If you do decide to keep the separator after the free trial, I'll let you have it at actual factory cost with only one small factory profit added. You pay no middleman's profit—I sell direct from my factory to you.

Write for My Great Special 1913 Offer

Positively the greatest offer I've ever been able to make. If you will write at once, I'll tell you how you may get one of these wonderful separators either partly or entirely free and without any work or canvassing either.



Cow Book FREE!

If you write at once I'll send you a copy of the great Galloway Cow Book absolutely free. The only book of its kind in the world. A complete manual of dairying for the farmer. Worth hundreds of dollars—sold regularly at $1.25. I'll send it free and postpaid together with my big separator catalog and full particulars of my great offers if you'll just send me a postal or letter RIGHT AWAY. Write today—NOW!

OUR SHEEP DEPARTMENT

THE sheep industry has been a neglected one in the corn belt, but it is now coming unto its own. The general introduction of the woven wire fence has made it easier for men to keep sheep and we propose from this time on to make this one of the strongest departments of the paper. We have recently secured the consent of a few practical sheep breeders to contribute articles on seasonable topics and to answer all inquiries relating to the industry. Every man who is at all interested in sheep is invited to ask questions or to contribute matter pertaining to any phase of the industry.

PASTURING SHEEP.

To the Editor of The Homestead:

The ideal way to manage sheep on pastures is to have them graze one pasture down reasonably and then put them on another pasture until the first springs up again. In this way the pasture is kept fresh and sweet. But in practice it may be frequently impossible to do this. However, where the rearing of sheep is an important part of the farmer's business it can be done to some extent.

When pastures get far ahead of sheep they should be grazed down if possible with cattle. In such a condition the sheep will not graze down the grass that has become rank and woody. By preference they will feed upon those parts where the grass is short. In such places it is shorter and sweeter than elsewhere. Where it is not practicable to graze it down with cattle it ought to be mown if possible. Whether it should be left to mulch the ground or drawn off should be determined by the quantity of the grass and its value for hay. When thus cut off grass fresh and nutritious springs up in its place.

Some object to grazing sheep with other stock. Much depends upon the way in which this is done. If the pasture is large and not in any way overstocked, there is probably no objection to the plan, but, should the pasture be overstocked or should the sheep be relatively too numerous, then the cattle will be worsted in the grazing. Sheep eat more closely than cattle and can do well on shorter pasture. Where the grazing is plentiful sheep can feed upon what is most palatable to them, and the cattle eat what they relish most. Sheep will eat off many weeds that cattle avoid and in this way they help to clean the pastures.

For winter grazing long pastures are the best. They are best for the reason that they protect the grass underneath, so that when the sheep are grazing they get some grass with more or less succulence in it, along with what is dead. Subscriber.

Good roads in the future should be built on the zig-zag plan for the avoidance of hills and steep grades, the federal officer of good roads announced in declaring that the lives of horses and automobiles could be lengthened thereby and the cost of hauling reduced materially. The experts contend that the "longest way around often may be the most economical and shortest way home," and decry the national tendency to build straight roads whenever they must risk heavy grades.

Because crows do more good by picking up white grubs than harm by eating corn, Green county has voted to remove the bounty of 25 cents a head. During the year closing September 30th, $557.25 was paid out in bounty for crows.—[Wisconsin Farmer.

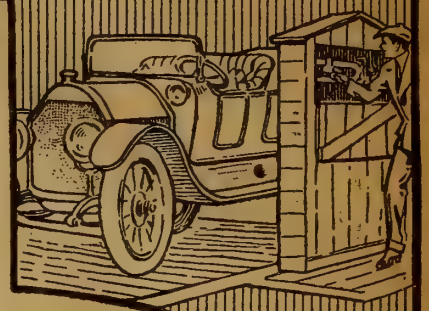
HEN LAYS 282 EGGS IN YEAR

(Continued from page 3.)

ty-seven individuals laid 200 eggs or better, mostly better. The Leghorns had the best breed average, 168.6, but reduced to terms of varieies the White Plymouth Rock leads with 172.3, the White Leghorns next with 170.6 and then White Wyandottes with 169.9.

The third contest is now on, under the direction of the Department of Agriculture, through the Storrs experiment station and the college jointly and without the newspaper connection which has existed. Ten birds to a pen instead of five prevails this time and three mongrel pens are entered in order to show how their laying compares with that of thoroughbreds. The college enters ten pens of its Leghorns for experiments with feeding formulas and methods, also. The entrants are even more widely distributed geographically and this promises to be the best contest of all.

Put the car on the scales before you buy it!



If you want to know how much weight electrical equipment has added to the 1914 car, before you buy it—

Weigh it!

You're the one who will pay the tire bills, the fuel bills, the repair bills—*Weigh it!*

See that all the car's belongings are under the seats, water in the radiator and gasoline in the tank and then—*Weigh it!*

You don't have to take anyone's word for its weight—*Weigh it!*

If you want to know why the new car is sluggish, feeble on the hills, sudden death to tires and thirsty for gasoline—*Weigh it!*

Then compare the weight with a 1910 or 1911 model of the same car.

Electrical equipment adds a dead weight of 150 to 250 pounds and in addition (by actual tests) consumes 8% to 12% of the engine power.

This calls for larger engine, heavier frames, axles, springs, tires—added weight all the way through.

Either you will find this or you'll find something worse—for if the manufacturer has not enlarged the engine and other parts to carry excess weight, the result is a weak, under-powered, overloaded car.

If you want a real automobile—

If you want a car that is full-powered, simple, easier on tires, less troublesome, less expensive in every way—see that it is Prest-O-Lited.

Even if the car was designed to carry electric equipment, the removal of such equipment and the substitution of Prest-O-Lite will make a large reduction in weight, stop the power loss, and increase the reliability, safety and economy.

If you want to know why—send for this free book.

It shows why electric lighting costs five times more than Prest-O-Lite—how you risk the safety of yourself and family by an unreliable lighting system.

It tells why thousands of motorists are keeping their old cars and refusing to buy the new ones with electric equipment.

It tells why the user of electric light has to wait for a factory expert to come and remedy its troubles.

This book is free. The coupon or a postal card brings it to you.

FRESH FROZEN LAKE SUPERIOR HERRING, 100 pounds, $3.50; quick shipments. The Consolidated Fisheries, Dept. 18, Duluth, Minnesota

Where corn and cows pay best!

Mr. Tate, near Camden, Ark. says: "We make 63 bu. of corn an acre here. There is all the native hay we need and splendid pasture. Lespedeza is found everywhere. Bermuda will not dry out or freeze."

Within a radius of two miles of Mt. Pleasant, Texas, there are 200 ever-flowing clear water springs and the finest Bermuda range you ever laid eyes on—think of the advantages *there* for dairying.

On account of fine pasture, etc., pure spring water, well drained land and mild climate, milk and butter can be produced for 40 per cent less along the

Cotton Belt Route in Arkansas and Texas

than anywhere else. Yet, these dairy products bring higher prices in the local small town markets, there, than northern farmers get in such cities as St Louis and Chicago

When you can get fine corn land at $15 to $35 per acre; when you have a mild short winter and don't have to stall feed stock; when you produce milk and butter at the lowest cost and sell them at the highest price; you can make big money. In Arkansas and East Texas you would have good roads, good schools, close markets, phones, rural delivery, churches, etc.

Books by a farmer—free!

We got a practical farmer to travel all along the Cotton Belt Route and talk with the farmers themselves, get pictures of their farms and their personal statements. Because he was a farmer this man knew what you wanted to know about these sections and he tells you in these free books—showing scores of actual photograph pictures of the farms he visited. You must not miss seeing these books. Write today!

ASPARAGUS IN A NEW ORCHARD.

A Missouri subscriber sends the following communication:

What would you think of putting asparagus between the trees of a new apple orchard (starting together) to produce while trees are growing—or permanently? The asparagus would probably do all right, as it grows wild in old orchards, but what of effect upon trees?

If the asparagus is planted with discretion it will not injure the apple trees, and by that we mean that it should not be so planted as to crowd the trees.

Suppose you set the apple trees twenty-five feet apart, each way. You can plant fifteen feet of the space one way, with asparagus, or twelve roots. That will leave five feet upon each side of the tree for culture. Then you may also plant two rows of asparagus, parallel with that already set, between the rows of apple trees. This will leave the orchard in good shape for cultivation one way. Or, if you wish to be very careful, and look a long way into the future, you may set only one row of the plants between the tree rows. For, while two rows would thrive for the first few years, the time will come later when the shade of the trees will injure the asparagus.

You need be under no apprehension of injury to the trees by this association. When any injury comes it will be the other way. However, it may well be expected if trees are crowded by the roots of the plants while they are small that their growth will be interfered with. But if planted as suggested above there can be no injury to the trees possible.

To make a success of the asparagus you will need to give it careful attention, in the way of good cultivation and manuring. And this will not injure the trees, for orchards usually suffer for just that kind of treatment. But in such manuring of the asparagus it will be best to avoid placing the manure close about the trees. The first use of the manure is for the vegetable and when the secondary effect of the fertilizer spreads out to the trees, its raw first influence will be dissipated, and no harm, but rather good, will result. For some reasons asparagus is an ideal crop for the orchard. It is better than raspberries or blackberries because more easily kept in its place. It is more profitable than potatoes, in a term of years, and is far more cheaply grown. And the same may be said of beans, cucumbers and all the other side crops usually grown in young orchards.

You may wish to think of this point: the difficulty of getting rid of asparagus when it is once established. Given three or four years to grow the roots are immense and it becomes almost impossible to plow them out, even with a strong two-horse team. For that reason, in common practice asparagus beds are rarely disturbed, but are left to grow for twenty-five or thirty years. Of course, the roots continue to spread and at the end of that time, if not kept dug out, they will embrace your trees pretty closely. But your trees will have attained such a size that the effect upon them will be negligible. Perhaps the best way to destroy an old asparagus patch is to smother it out. Shortly after the new growth starts up in the spring, put on two feet of straw or heavy manure, and when, after a week or so, shoots are seen to be still coming up, apply another coating. In this way, if the work is thoroughly done, asparagus may be killed out in two years.

We have had an unusually warm November and this has effected an enormous saving in feed. Cattle have been grazing throughout the entire corn belt and what has already been saved will tend to partially make up for the short corn crop. If it should continue throughout a portion of December, values of grain may be expected to materially drop.

The fact that packers are willing to pay a good price for any kind of cattle that are the least bit meaty has complicated the situation for the feeder. Every man who pays 7 or 8 cents a pound for feeders and on top of that must pay two freights is engaging in a speculative game and he must expect to abide by the consequences if a snug loss is pocketed at the end of the feeding period.

HELP WANTED

I WANT man with rig in each county to look after well established business in the small towns and on the rural routes. $100.00 per month right from the start with good chances for increase and promotion. Experience unnecessary. Write me today. MANAGER COUNTRY SALES COMPANY, Box 907, Des Moines, Iowa.

It's a Pleasure to Farm in the South

NATURE cooperates with you at every turn in the Southeast. Crop failures are hardly known.

You are favored with 200 to 300 growing days, which allow two and three crops from the same land each season.

Expensive irrigation is unnecessary, as 45 to 60 inches of rain, well distributed through the growing season, fall annually.

The assortment of crops raised in the Southeast is the greatest anywhere in America. From the tropical citrus fruits to the finest varieties of apples, peaches, pears, grapes and numerous other fruits and nearly every known variety of grains, vegetables, grasses and legumes can be produced somewhere in the Southern Railway territory.

And with all these superior advantages Southeastern land now averages less than one-half the price of farms in other parts of America.

$15 to $50 An Acre Buys Excellent Homesteads

where the climate is exceedingly agreeable and healthful, where railroad communication is of the highest order and transportation to Northern markets but 24 to 48 hours.

Life in the rural sections of the South is all that could be desired. Modern highways and telephones, the best of high and agricultural schools, good churches and trading centers—all these advantages are to be had in this growing section.

INVESTIGATE SOUTHERN CONDITIONS

Avail yourself of the low Homeseeker's Rates. Write for particulars. Learn of the favorable conditions in the South. Ask for the "Southern Field" magazine, state booklets on Virginia, North or South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee and Kentucky. Let us know the state and line of farming in which you are interested.

Lanpher Fur Coats

set the standard of quality for all Lanpher Goods

Since 1876, Lanpher, Skinner & Co. have been making fur garments. Their plan was to make better fur coats than anybody else ever tried to make, and that has been the guiding ambition of the house ever since. You see the result in better materials, more careful workmanship, better fit, shape-holding and wearing qualities.

For cold weather comfort, and for long service, you can't make a better investment than a Lanpher Fur Coat or Fur-lined Coat.

Lanpher Mackinaw Coats for men and women fill many cold weather needs.

For very rough or heavy use there is nothing to surpass Lanpher Sheep-Lined Jackets and Ulsters.

Write for the Lanpher Book of 1913-14 Styles. It will tell you all about Lanpher Outdoor Clothing for men and women. If no Lanpher dealer is near you, we'll see that your needs are promptly supplied.

Lanpher, Skinner & Company

SAINT PAUL, : : : : MINNESOTA.

Ladies: Remember Lanpher Furs are guaranteed. The Lanpher book mentioned above will guide you in the selection of becoming models. You can see them at your dealers' before buying.

Hog Cholera Poultry Roup

Keep your stock in fine shape. At the first sign of disease in hogs, chickens or other live stock use Sloan's Liniment. Read what others did.

Governor of Georgia Uses Sloan's Liniment for Hog Cholera

Gov. Brown says that he has never lost a hog from cholera, and that his remedy has always been a tablespoonful of Sloan's Liniment in a gallon of slops, decreasing the dose as the animal improved.

SLOAN'S LINIMENT

Sure Remedy for Roup

Sloan's Liniment applied to the affected parts is the speediest and surest remedy for roup and canker in all its forms, especially canker in the windpipe.—*E. R. Spaulding, Jaffrey, N. H.*

She Cannot Say Enough In Its Praise

In the fall my chickens were all sick, including some white leghorns. One had bumble-foot and one had the worst kind of a sore mouth and windpipe, her eyes were closed and her head turned round to the back.

I used Sloan's Liniment on them and I am happy to say that every one of them got well. I cannot say enough to its praise.—*Mrs. J. W. White, Montgomery, Ala.*

Sloan's Book on Horses, Cattle, Sheep and Poultry Sent Free

All Dealers. Prices 25c, 50c and $1.00 Address Dr. Earl S. Sloan, Inc., Boston, Mass.

More Shredding Endorsements.

More Subscribers Who Favor the Plan of Shredding Corn Fodder Express the Faith That Is in Them in the Following Letters.

C. E. RUSSELL, Warren county, Illinois:—About twenty years ago I bought the first fodder shredder owned in this county and operated it until it was worn out. I did certain work for my neighbors and charged them $10 per day.

This machine did not husk the corn off the fodder, but corn and fodder all went through together and it did a splendid job of shredding. The cost per acre for shredding and all help ran from $1.50 to $2 per acre, depending on the distance which the fodder had to be hauled and how well the fireman kept up the power.

After wearing this machine out I bought a third interest in a six-roll husker and cutter and kept my share until that machine was worn out. The last ten years I have hired my shredding done. Last year my shredding was done with a threshing machine which shells the corn and elevates it into a wagon just the same as it would wheat or oats, besides doing a good job of shredding and all this about twice as fast as any shredder I ever saw. The owner of this outfit charged $1 per acre for shredding. If we paid cash for all the help it would cost about $2 per acre to shred fodder, but as the farmers exchange work no money is paid out except to the machine man.

As the fodder has to be hauled in from the fields anyway, it does not cost any more to haul it to the shredder than it does to haul it in a load at a time, and not half as much if it gets snowed under in the field. Then, too, it puts the cornstalks in condition to make the best kind of manure and they are much easier to handle, enabling one to handle much more of it in a day. Just this one item will almost pay the cost of shredding.

We store our shredded fodder in the barn mow or shed. A few times we have filled our big cattle hay racks outside, but this wastes a good deal if the machine has a blower to elevate the shredded fodder.

I have fed a good deal of shredded fodder in the last twenty years to my work horses and in fact through several summers they have had shredded fodder for roughage and I never had horses do better or stand the work better than they did. They will not gorge themselves with it as they are apt to do if they are fed all the timothy or clover hay they will eat.

If a farmer has lots of fodder and a good place to store it, my advice would be to shred it by all means. Be careful not to do the job when it is damp or wet or the fodder will mold and spoil. It can be too dry also and when too dry a great many of the leaves will be lost. But if you can strike a happy medium, neither too wet nor too dry, then rush the shredding and you will never regret it.

SUBSCRIBER, Des Moines county, Iowa:—When I was a boy we used to husk the corn from the shock, then haul the fodder through snow or wind in January or February to the feed lot, there to see half of it trampled in the mud and wasted. Some people are still doing the same thing.

Such methods won't do in these days of progress. If I should be asked to name two of the best things for a farmer to own, I should say at once, a manure spreader and a silo. The spreader is doing more to "make two ears of corn grow where one grew before" than any implement on the farm today, and the silo is making the feed from one acre of corn go as far as three or four in days of yore. In fact, the silo has about solved the feed problem for a great many of our corn-belt farmers and dairymen.

But, alas, all our farmers don't own silos, and there remain thousands of acres of corn fodder standing in shock every year to be taken care of and fed. How shall all this fodder be handled to get the greatest amount of feed at the least cost to the farmer?

After several years' experience with shredded fodder I have come to think the shredder or thresher the ideal way to deal with the fodder problem. The work can be done at a time when farmers are not rushed with other work, a good time being right after corn husking. As a rule the work should not be done too early, as the fodder should be thoroughly cured before shredding. It is apt to heat and mold if put in the barn before it is well cured.

The man who does our shredding has a small machine with a capacity of 200 shocks twelve hills square per day. The shredders are equipped with blow stacker and the fodder is blown into the mow ready for use. If barn room is scarce, a crib can be made of woven wire and answers the purpose nicely. I think it a good idea to put on a few buckets of salt as the fodder is being put into the barn.

I like the shredder, 1st: Because the feed is in the barn. There is no digging of corn shocks in snow or mud.

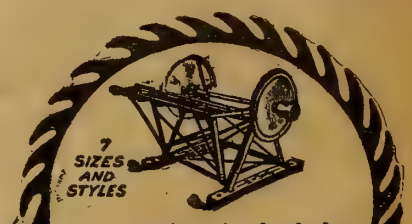
2d. It can be fed in the mangers, and cattle and horses like it.

3d. What is wasted or the refuse parts of the stalk makes fine bedding and goes into the manure; absorbing and thus conserving much of the liquids which would otherwise be lost.

The manure can be handled nicely with fork or shovel and the spreader has no trouble in putting it on the field.

The cost will depend somewhat on circumstances, as the help necessary depends on the distance to haul from the fields to the machine, etc. With wages at $1.50 per day for eight men, which is usually enough, and 10 cents per shock for shock of twelve hills square the cost will be about $16 per 100 shocks, not counting the boarding of help. In our neighborhood we farmers exchange work at such times which makes the money paid out less. At first thought some may think shredding an expensive way, but when you consider the extra amount of feed gained or saved and the number of tons of $15 hay saved, it does not seem so high after all.

It is hard work to be sure, and some trouble for the women folks, but what do we farmers get without work?



Shall we send you free book about

APPLETON WOOD SAWS

It shows pictures of all our buzz, drag, circular log saws and portable wood sawing rigs, with or without Appleton Gasoline Engines. Tells you straight facts which we guarantee our saws to back up. Opens a way for you to make money this Winter sawing your own and your neighbors' wood. Selecting Corn for Exhibition.

THE selection of an animal that will win in a livestock contest is considered an art. Experience shows that it takes the same kind of training to select prize-winning corn. Men who do not have any special advantage in the way of soil or seed are taking good premiums every year at corn shows simply because they select well. Good judges have been heard to remark, after looking over a sample, that no doubt it could have been much improved had the exhibitor understood the principles of selection better.

In showing corn, as in many other things, experience is the greatest teacher. The man who can take a sample of corn to an exhibit, and learn wherein it could be improved, often gets more out of the contest than the prize winners. He should study the methods and wishes of the judges, and go home and apply the information. It is true that judges will differ, but usually on minor points. It is well to get the essential points first and not pay too much attention to details till necessary. Of course, there is occasionally a judge who follows some hobby to extremes, and care must be taken to avoid being misled.

It will not be possible to describe in detail what kind of an ear should be selected. This article will deal with the general precautions that seemingly need mention. Primarily it can be said that the selection of corn for show is the same as selecting for seed purposes. Any judge who considers otherwise makes an error. However, a few things are necessary in show corn which are not considered in seed corn. The same conditions exist in the livestock ring. A well-groomed animal is necessary for show purposes, but not for breeding or fattening. Some few things in corn are similar. For instance, a bleached ear would look bad in a contest, but would not be injured for seed. It probably would not be given a high grade, even though a germination test showed it to be good. Crooked ears and those with crooked rows will usually receive the same treatment in very close competition.

A discussion will be given here of a few points, not in order of their importance, but as the judge usually takes them up. First, uniformity is, no doubt, the most noticeable point in a sample of corn. A sample, of any number of ears, should be uniform in every respect. This is not without its practical side either. Samples of different sized ears with rough and smooth indentation, different lengths of kernels, and various shaped ears, all tend towards making corn that will vary in time of maturing. Not enough grain will be produced on some of the ears because they will be either too shallow or the ears too small. Above all, the sample should be uniform because this is the only guide as to the breeding of the corn. A sample of uniform good ears will indicate that some unusual care has been given it and that intelligence is back of it. A sample without uniformity indicates carelessness or lack of knowledge and anyone would hesitate to award it a high place.

Uniformity makes attractiveness, not only to the judge, but to the people as well. It is best to select ears as large and with as deep kernels as will safely mature in the locality where grown, and to have them with strong middles, well-filled tip and butts, if possible, then see that the color, indentation, and width of kernels, are uniform as well as the above mentioned points.

Maturity and germination are also necessary in show corn as well as in seed corn. Immaturity is best indicated by sappiness, chaffiness, and shrunken tips of kernels. Starchiness is another good indication, providing the ear is not naturally starchy. If the white starch appears on the backs of the kernels down near the tips, or if this place is shrunken, immaturity can always be blamed. Poor germination should always be avoided by gathering the ears for exhibit quite early. Too early gathering will cause a shrunken appearance and detracts from its value for show purposes. Judges would not discriminate severely except for the fact that it is impossible to distinguish this appearance from that of immature corn after drying. If the germination is uncertain, a test can be made of a few kernels from each ear without injuring the sample.

Many other points such as freedom from mixture, shape of kernel, size of grain, and other points have been mentioned in these columns before and it is not deemed necessary to repeat them here.

Successful competition requires much careful labor. The man who feels that he can give his corn ordinary care and go out a few hours before the contest to select the samples, will almost invariably be beaten by the man who selects carefully. Many long hours are spent on the prize-winning samples of the larger shows.

After gathering the corn from the field it should be hung where it will get absolutely dry before entering the contest, especially if late in the season. It should be fire-dried, if possible, as exhibit rooms are always heated in some way and if not thoroughly dry before entering, the judge will likely find some loose ears. The ears should not be hung in too strong light as they will fade. Ears should be supported some way in hanging. Tying strings from the middle or laying on hangers will often cause crooked or marked ears.

When ready for the final selection all the ears should be laid down in rows on the floor or on boards. A kernel or two should then be taken from each ear. This will not detract from the sample, especially as the grains can be inserted again after examining. Judges do not pretend to make their decisions without removing kernels. Neither can the exhibitor intelligently select his sample without removing kernels. These kernels should then be considered as carefully as the ears for their size, shape, size of germ, quality, and uniformity. Eliminations can then be made until the best sample is secured.

The butts of the ears should be trimmed out until none of the shank is left. Exposed tips should also be broken off. If any ears are dirty or dusty they should be cleaned before being exhibited. If it is necessary to have a slight variation in the lengths of the ears, a better appearance will be made if the longer ears are placed in the middle or near the end, and grading them down to the smallest. These points mentioned are not to deceive the judge, but only to add to the attractiveness of the sample. It is the same principle on which a stockman decorates his animals or stands them in a certain position while they are being judged.

Managers of exhibits can add much to the attractiveness of their contest by providing well-lighted large rooms. The corn should then be laid out in neat rows on tables where they can be studied. Crowded dark rooms are too common as exhibit rooms.—[Paul C. Taff in Iowa Agriculturist.

Let Me Ship You My Famous 5 H.P. Galloway Stationary Engine—Only $99.50

Galloway Engines will run on Kerosene, Gasoline, Naphtha, Distillate or Natural Gas.

Made in Sizes 1 3-4 to 15 H.P.

All Backed by Strong Five Year Guaranty on Materials.

Yes, Sir! Try it 30 Days on Your Own Farm at My Risk

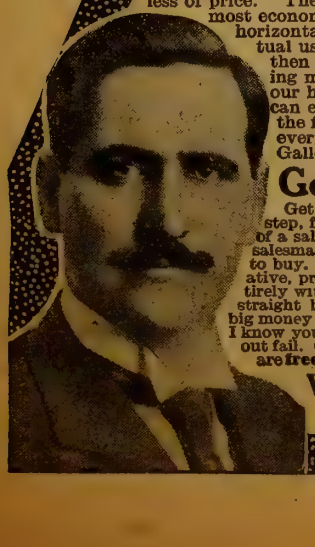
Every Engine made in the Big Galloway Engine Factory is sold right direct to your farm on the most liberal free trial offer ever made. You don't take one cent of risk. I take every bit of the risk of my Engines pleasing you. My guarantee is printed in black and white and says:—"Satisfaction or your money back" and I'll pay all the freight charges in case my Engines fail to please you. Now, then, here is just the proposition in a nutshell. If my engines are as good as any Engines on the market, my terms more liberal than any other manufacturers', my guarantees stronger, then how can you afford not to give my Engines a trial on your farm and save a big sum of money in the first cost alone? Remember, I absolutely guarantee all my claims and warranties and give you a positive 30-Day Free Trial of my Engines right on your own place.

Five years ago when I astonished all competition by coming out and offering my Famous 5 H. P. Stationary Engine for sale at $119.50 dealers were asking from $225 to $300 for inferior engines of same capacity. I've made them come down some in their high prices, but they are a long way off still. They can't anywhere near meet my New, Low Engine Prices. Never! And I am giving you a better Engine than ever before. My 5 H. P. Engine Price is just a sample of my new low prices. All my other styles and sizes are selling at as low corresponding prices and on the same liberal terms. Investigate! Give me a chance to prove my claims. The way to do it is to send for my catalogs, which give all the facts. Get a copy today—it's FREE to you.

My Direct-From-Factory Plan Saves You $50.00 to $300.00

Why not put the money I can save you on a Gasoline Engine right back in your own pocket? That comes about as near keeping your money at home as any way you can think of,—doesn't it? It certainly does, for when you buy on my Direct-From-Factory Plan you have no middlemen's profits, salesmen's expenses or dealers' bad debts to pay. No, sir, all you pay on my plan is just one small manufacturer's profit in addition to actual cost of materials and labor that enter into the construction of the machine.

My Engines are built especially for farm work. You won't find any better made Engines on the market for doing your work, regardless of price. They are the easiest to start, easiest to operate and most economical Engines built. Water-cooled, four cycle, horizontal type. And all proven by the "acid test" of actual use by over 35,000 users. If this isn't proof enough, then here is still more proof—the fact that we are selling more Galloway Engines today than ever before in our history. Isn't it a fact that the only article that can endure is the article of merit? It certainly is—and the fact that our Engine business is still going ahead every year by leaps and bounds proves my claim that Galloway Engines are high quality engines that give satisfaction. They will please you and I'll save you big money right at the start. You can get them in sizes from 1 3-4 to 15 H. P., either stationary or mounted on hand and horse portable trucks, or equipped with wood-sawing attachment. I can supply you also with a lot of the machines such as Grinders, Shellers, Washing Machines, Shredders, Pumps, etc., that you may want for running by power at money-saving prices. Write me. My Free Service Department—composed of Engine Experts is always at your command to assist you in selecting the best size Engine to buy for your requirements, in choosing right size pulleys, etc., or helping you to plan and equip your power house. This service is free. Absolutely. Write me for my catalog. I will send it, postage prepaid, and without obligation to you.



Get My FREE Engine Book and New Special Offer NOW

Get familiar with my money-saving, direct-from-factory plan of selling. Get my Engine Catalog. That's the first step, for my catalog is my only salesman and it costs less than one-third the price of a salesman's ten-cent cigar to put one in your mail box. The cheapest and best salesman on earth. Let me send you one today, postage prepaid. No obligation to buy. Then when you send for my catalog I will explain my new co-operative, profit-sharing offer that will help you get your Engine partly or entirely without cost to you in the end. No soliciting, no canvassing—just a straight business proposition. Remember, I absolutely agree to save you big money on any engine you buy of me. Isn't that fair? It certainly is and I know you are looking for just such an opportunity. Write me today without fail. Get my Engine Catalog or my New Pumping Engine Catalog—they are free. A postal will bring them. WITH THE EDITOR.

Oh, fire of December! Glimmer and glow!
Burn like the heart of a boy I know,
Burn! Burn!
Burn till the pippins burst and then
Burn till the pop corn fills the pan!
Burn, oh, fire, till the midnight chime
Shall beckon to bed
Each golden head,
To dream the dreams of the Christmas time.

—James Newton Mathews.

As a holiday, Thanksgiving belongs to the farm, but Christmas belongs to the whole world. Would that every person in this big, good old world might be brought in touch with the spirit of the day! To the normal grown-up, the Yuletide is synonymous with home and mother. To the children, it suggests good Old Saint Nick, the real one, who still wears whiskers—rosy, sparkling, white and jolly, perched on the chimney top, preparatory to taking the leap into the black abyss. Fortunate, indeed, for the world that such a limited number of people are too righteous (?) to deceive the babies about Santa Claus. A starved childhood is the worst of all reverses. God pity the child that must grow prematurely old. God pity the man or woman who grew up in an environment where every day was the same; where the jolly "Merry Christmas" was scorned as nonsense, or possibly sacrilege. Make the day memorable in some way, for both old and young—especially the young—even though it be an effort. If we do not give them something to "look back to," after they have gone out to meet the stern realities of life, they are cheated, just as surely as if their material rights were withheld.

While the children are small, a little remembrance means much, and after they grow up, so much means so little, in this day and age of the world. There is only one sane way to view this matter, and that is, to begin when they are wee tots, explaining the meaning of the day, that the gift, with nothing of the giver, is bare; that the gift should follow the thought, and that the thought should mean more than the symbol. The happiest, jolliest lot of youngsters imaginable, look forward to every holiday and every birthday, as well, not because they ever received anything so very "nice," but because every milestone was remembered. The mother could not afford even the simplest gifts, so frequently did the birthdays appear. Not always possible was the birthday cake, so limited was her time; but there never failed to be a small individual pie at the proper time, and the little fellow understood. Understood that mother was glad he was there, that he was a gift and not a bother, and the token, small as it was, meant more than the most expensive present possibly could.

View the matter as we will, it is the little things that mean weal or woe; the little things that bind the children to the home or drive them to seek companionship elsewhere. Do not make the mistake of thinking that the children do not appreciate your effort; a boy's indifference is all on the outside, and rarely do we see any outward demonstration. All too often children are misunderstood. If we, as parents, do our part in caring for the little things, the big things will care for themselves. Just so surely as we deserve the love of our children, just so surely, if our boy were to live to be a hundred years old, there will be times when he will wish that he could slip into his own bed at the old home, and mother were there to place an extra comfort!

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

He has achieved success who has lived well, laughed often, and loved much; who has gained the respect of intelligent men, and the love of little children; who has filled his niche and accomplished his task; who has left the world better than he found it, whether by an improved poppy, a perfect poem or a rescued soul; who has never lacked appreciation of earth's beauty, or failed to express it; who has always looked for the best in others and given the best he had; whose life is an inspiration; whose memory a benediction—Bessie A. Stanley.

One touch of nature makes
The whole world kin,
Trials are but "touches,"
Meet them with a vim.
—R. H. Blossom.

"If you and I, just you and I,
Should laugh instead of worry;
If we should grow, just you and I,
Kinder and sweeter hearted,
Perhaps in some near by and by,
A good time might get started;
Then what a happy world 'twould be
For you and me—for you and me!"

Let us love so well that our work shall be sweeter for our love, and still our love be sweeter for our work.—Elizabeth Barrett Browning.

HOMESPUN WRINKLES.

Try adding freshly grated horseradish to your canned pickles; it will help them to be crisp and well flavored.

Should the knob come off any kettle, a screw may be slipped through the hole with the head inside the lid, screw a cork into the protruding end; this knob will not get hot and can be replaced.

To soften brown sugar that has become lumpy stand it over a kettle of boiling water.

A quantity of quicklime put into a damp cupboard will absorb the dampness.

Butter will keep fresh several months if packed in jars and the jars are packed in charcoal. It should be kept in the coolest place possible.

The vacuum principle is the latest and best for the laundry. All former makes of machines were arrangements of cogs that rubbed the clothes much the same as a board. The vacuum method is a tin affair that can be put into any boiler and works like a coffee percolator.

THINGS GOOD TO EAT.

Waffles.—A very appetizing breakfast dish. Two cups sifted flour, two teaspoons baking powder, one-half teaspoon salt, two tablespoons butter, three eggs, one and one-half cupfuls milk. Mix the dry ingredients and sift several times. Put in the butter as for biscuit. Separate the eggs, beat yolks and mix with the milk; add this to the dry ingredients, beat well, then fold in the stiffly beaten whites. The batter should be of pouring consistency; if too thick, add milk, then cook in hot buttered waffle irons.

Cream of Lima Bean Soup.—Cook one pint lima beans in slightly salted water, until perfectly tender. Press through a colander and add one quart milk. Put through a food chopper two onions. Rub together one tablespoon of butter with two tablespoons flour. Add to the mixture, heat and stir constantly until smooth. Add salt and pepper and serve hot.

Turkey Croquettes.—One and one-half cups chopped, cold turkey; one-fourth teaspoon celery salt, one-half teaspoon salt, pepper, a few drops onion juice, and one cup thick, white sauce. Mix these ingredients in the order mentioned, cool and shape as desired; roll in beaten egg; cover with fine crumbs, and cook in deep fat.

Thick White Sauce.—Two and one-half tablespoons butter, one-half cup flour, one cup milk, one-fourth teaspoon salt. Melt the butter in the upper part of a double boiler; stir the flour into it, and when blended add the milk and stir constantly until dissolved. When it begins to thicken, place the dish over water and cook slowly until thick and smooth. Cool and add to the croquette mixture.

AMONG OURSELVES.

For those of us who wish to remember our many friends, but have only a limited amount of money to spend, Mary Clark solves the problem by giving directions for making dainty articles for all, from the tot to the larger members; this is a very seasonable suggestion, and will, I hope, be of benefit to many of our members:

It is time that those of us who make most of our Christmas presents should be getting busy, and perhaps a few suggestions will be appreciated by those who "don't know what to make." For the men folks, buy some of the black fleeced socks, that sell for 15 cents a pair, and with wash silk embroider designs of polka dots or other figures. Crochet or knit mufflers of soft yarn or silk. Make fancy sleeve holders of elastic, a couple of brass rings, crocheted over, a small amount of bright ribbon. For the wee tots, make some rattles by crocheting or knitting a cover for a small stick, about eight inches long, to which fasten several small bells, that can be

bought at a variety store at five cents a dozen. For "next to the baby," make a fancy ball by covering a ball made from yarn, with a crocheted cover of bright yarn. Make picture books of strong cloth, sewed into a book form on which paste any pictures, cards, etc., that would interest the recipient. I always save all the appropriate pictures through the year, that I find in children's magazines, and other publications. I suppose you will all smile, but I have found that boys "betwixt and between," would rather have a liberal supply of homemade candy, pop corn balls, and similar things than anything else; they consider life too short to be "dolled up," so would not thank you for any articles of adornment you might give them. Girls, of course, are pleased with collars, handkerchiefs or hair ornaments. Nice bandeaus can be made by sewing fancy beads on black velvet ribbon, in fancy, or conventional design. For the woman who likes nice things, but is too busy to make them, give some nice collars or embroidered aprons. To the woman who cares for nothing fancy, give the big serviceable gingham apron. If you paint, even "just a little," you can make nice photo frames by covering a paste-board frame with drawing paper, and painting designs of violets or any preferred flower. Choose the recipient's favorite if you know it. There can be made fancy bows, jabots and ties by painting neat little sprays on the ends of short lengths of ribbons or silks. Never destroy, no matter how small, any pieces of lace, silk, velvet, linen or embroidery. If you are any good at all at contriving, you will find a use for them at Christmas time.

This list of directions is very practical, and there is only one part of it that does not appeal. That is the present for the boy who has not yet caught up with the size of his feet and hands. That he does not wish to be "dolled" is certain: that he does not like nice things, is a g-r-e-a-t big mistake. He likes pretty articles just as much as does that girl who gets the monopoly of the dainty belongings. Bless his heart! Nobody is ever the wiser, unless they understand boys, but many a boy carries an indifferent, almost rough exterior, while the heart aches with the injustice of it all. Do try, when choosing the Christmas offerings, to "break even," share and share alike.

This sister has, to a large extent, made much of little, and generously passes it on. Would that many "Mrs. Homesteaders" were thoughtful enough to give from their fund of experience:

When I, as a bride, came to our modest home, in the far West, I had many things to learn. After I had done my washing by hand a few times, using kitchen chairs for a wash bench, I purchased a galvanized washer that serves as both a washer and boiler. My husband made me a wash bench that was just the right height, and long enough to hold two tubs, with an arm between for the wringer. I found that a hot coal fire made the house very uncomfortable in the summer time, so a good oil stove was purchased. It is still giving good satisfaction. Next, we attended to the water supply; it was impossible to bring water to the house by means of a tank and pipes, so a large cistern was built with a filter, and a good pump installed. We now had an ample supply of water for all purposes. It's a real saving to put down hard wood floors, keep them well oiled, and use rugs. The latter is the best saver of all, the saver of the housekeeper. A good, dustless mop can be made from stocking legs cut into strips, dipped into kerosene and well aired. A supply of granite or aluminum utensils is essential to modern housekeeping. I do not wipe my dishes, excepting the glasses and silverware. The other dishes are scalded with boiling water and allowed to drain; they dry beautifully. When packing away summer or winter clothing, and other seldom-used articles, a list is kept in a notebook of the contents of each box or trunk.

As a hard-working housekeeper, the editor has learned many things from this practical talk. It is the kind of contribution that the whole working force of this paper approve, from the manager and editor-in-chief, clear down the whole list. Why not, this Christmas, instead of giving useless ornaments, questionable as to either beauty or utility, remember our friends with some utensil? Many inexpensive labor-saving devices are beautiful as well as useful every day in the year. At a shower given to a soon-to-be bride the invited guests brought everything that is required in a well-appointed kitchen, from a double boiler to a mouse trap; an improvement, surely, from the "china showers," where a dozen or more salad dishes would be left to collect dust from year to year.

"Home, Sweet Home" the magic words bring out the very best in any one, be he saint or sinner; that every home is not what it should be is certain. But do our readers think that this picture is true of very many? Ponder this question well; look about and give us your unbiased opinion. This is Mrs. Palmer's opinion:

The beautiful sentiment expressed in "Home Sweet Home," is being rapidly lost sight of in these days of rapid transit. We build magnificent homes, and are very proud of their elegant appearance, but in far too many instances they are merely stopping places instead of being homes sacred to us, because we have worked and planned for years, that we might in declining years "take things easy." Traveling is so easy that the excitement of frequent change is destroying the love for the sacred shelter of home. Children chafe and fret under the restraints of home, and we weakly yield to their importunities and allow them to seek excitement in public places. If our financial condition forbids any change, we are many times discontented. Travel and change of scene are desirable, as well as beneficial, as a means of recreation. We can return to our home and work, refreshed and with a feeling of gratitude for home and home friends, satisfied that, "Be it ever so humble there's no place like home."

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 56, Box 21, Philo, Illinois.

My dear Young Folks: It is the desire of this paper to make your department of especial interest. To do this it is necesary that you do your part. The editor of this page has spent her whole life in close contact with girls and boys. Many of her happiest years were spent in a country schoolroom where, as teacher, she and her pupils were good chums. There was no stiffness and straightlaced formality. Contrary to the popular belief that this kind of relation will cause pupils to lose respect for their teacher, the pupils never abused the privilege. In later years it has always seemed that girls and boys, away from home, needed mothering. When her own babies grew old enough to talk, they vied with each other as to who was "mamma's best fellow." And now to this numerous family is to be added all the boy and girl readers of this paper. Come to us with your troubles as well as your joys. If something perplexes you, be sure you will get a sympathetic hearing. If every letter is not printed it is because there is not room for all. From out the large file the ones that are of more interest to the greatest number of readers are published. Try to remember this, if you do not always see your letter in print. Especially are letters desired that deal with farm life. Things are happening every day, right on your own farm, that would help some one, ways of doing things, both indoors and on the farm. Some of our boys are selecting seed corn this very minute; many of our girls are preparing the school lunches this very minute as well. The editor has an object lesson in sight about this as she is typing this. Who can tell about it? This is only a suggestion; a variety of subjects is desired, rather than so many letters on one subject. Prizes will continue to be offered, but when you write with the object in view of helping some one, rather than material gain, then will you do your best.

KINDNESS IS FIRST, AND BEST.

(First Prize.)

I am a farm girl, and wish to tell about an instance of kindness that we children once saw when we were going to school.

We met a man, driving one horse, hitched to a load of coal, trying to make the poor creature pull it up hill. The horse stood still and the man began to beat him cruelly. One of the boys who was with us said: "Perhaps, sir, the load is too heavy for the horse." "No danger of that," replied the man; "he has pulled many a load heavier than this, up larger hills."

Just then a man who lived near came up and said: "If he can pull larger loads, something must be the matter, or he would pull this one." "Oh, he's only headstrong, and thinks he can do as he wishes, but I'll show him that I am master." As he said this, he took the whip and was going to get down from the wagon, but our friend said: "Wait a moment; perhaps he has not been treated as he should; let us see if kind words won't do more good than blows." "You may try if you wish," returned the driver, "but it won't do any good."

The man patted the horse, spoke kindly to him, then pulled gently on the bridle, and the horse pulled to the

All Told 265 Thousand Women Wrote to Us The Last 6 Months

Over a quarter of a million! And every letter was quickly and fully answered: not in print, but in personal, helpful and confidential letters by mail.

Twenty-one of the Editors on *The Ladies' Home Journal's* staff do this work: each an expert in her or his line, whether it is Fashions, Needlework, Household, Millinery, Music, Babies, Books, Religion, Building a House, Home Parties, Church Sociables or Confidential Affairs. It makes no difference what the question is, an authority is there to tell you what you want to know: Josef Hofmann about the Piano, Hamilton W. Mabie about Books and Reading, Lyman Abbott about Religion, Jane Addams about Human Betterment, two expert woman doctors about Babies, and so on.

For 20 years *The Ladies' Home Journal* has been building up this personal service back of the magazine: a personal relation between thousands of women and the editors, so that the magazine has not remained a thing of type and paper, but has become a personal, living help in the lives of hundreds of thousands of women.

Not a penny is ever charged for this service. It is at the free disposal of every reader of *The Ladies' Home Journal.*

A booklet, entitled "The Story of 600,000 Invisible Hands," tells something about this service. A postal-card request will bring a copy.

A year's subscription to *The Ladies' Home Journal*, by mail, costs $1.50, or it may be bought from any Newsdealer or Boy Agent at 15 cents a copy.

Sec'y People's Co., 450 Popular Bldg., Des Moines, Ia

top of the hill without stopping. Then the driver stopped his horse, and said: "Young man, I must thank you for having shown me that kind words are better than blows."

As we walked on, one of the boys said that if all boys would use this rule, we would be all right. The other boys thought so too. I think if men would be more thoughtful, boys would be kinder to animals.

—"Blue Bird."

[Some boys know, at the expense of time and temper, that some horses will not pull, no matter what they do, wise or otherwise. To those who have had trying times with a confirmed balker this good little story may not appeal. Now boys, I know just how you feel about it, and can sympathize with you. However, do try to remember that every horse that refuses to pull has at some time been unfairly treated, either through carelessness, cruelty or by accident. In view of this fact, always temper justice with mercy, with the latter largely in evidence. If you are so unfortunate as to have a horse that has "quit the job," try pulling him to one side before starting. An animal, even a horse, can be conscious of but one thing at a time, and it will divert his attention—sometimes. Whatever else you do, don't bring yourself to the level of the lower animals, by cruelty.]

Buster's Reward.

(Second Prize.)

The Melvin family lived in a large tenement house on Main street. Mrs. Melvin, being a widow, did washings to support her family of six children. The children were so nearly of a size that she called them her "stair-steps."

One day while at dinner they were startled by the yelping and howling of some animal in distress. "Step number five" known as John Jones—named for his father—ran out into the street and soon returned, holding a small dog tightly in his arms. "Oh, mamma!" he exclaimed, as he removed a tin can from the poor dog's bruised and bleeding tail, "may we keep him?"

At first Mrs. Melvin objected; it would be one more mouth to feed, even though it was only a dog, but later she decided he could stay, because she did not like to let the opportunity pass to impress on the childish minds the importance of kindness to animals. The family soon became very much attached to him and he became one of them.

One night the family was awakened by Buster's howls and whining to find the house filled with smoke. Mrs. Melvin rushed to the kitchen, and found some of the children's clothes that had been placed too near the stove were burning. Buster had awakened them just in time to save the big apartment house from being burned, and very likely the lives of the inmates as well. The dog rewarded the mother for her kindness, as well as the kindness of her children.

God wishes us to love and care for the dumb animals that he puts on earth for our use. They are His creatures, and in caring for them we serve Him.

—"An-Older-One."

Our Pet Squirrel.

(Third Prize.)

One day our neighbor was going for his cows, when he heard a noise, and looking around he saw two baby squirrels on the ground. They were looking for something to eat. A boy had shot the mother, and the poor little things were left to starve.

The man picked one of the little fellows up, but the other escaped. The next day, he brought it over to our house, and we raised it. It is now two years old and very tame. It has a large cage, with a sleeping room and a merry-go-round.

I love to watch the squirrel carry corn husks into her sleeping room. She takes three husks, rolls them into a ball, and then stuffs them into her mouth, jumps into her sleeping room, and then jumps out for more. I think it was very kind of the man to care for the baby squirrel.

—"Oak Leaf," age 12.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5681 Boys' Pajamas.—There are two styles in this pattern, that of high neck standing band or with low neck having stole band. The trousers are in two pieces and are very easily made. The coat has two pieces in the body, front and back, and with the addition of sleeves, either band and the pocket the garment is complete.

The pattern 5681 is cut in sizes 4 to 16 years. Medium size requires 3½ yards of 36-inch material, ¾ yard of 27-inch material contrasting goods. Price of pattern ten cents.

5217 Ladies' House Dress.—Linen, gingham or percale can be used to make this house dress. This dress closes at the front and can be made with either the long or three-quarter length sleeves. The skirt is cut in seven gores.

The pattern 5217 is cut in sizes 32 to 44 inches bust measure. Medium size requires 6 yards of 36-inch material. Price of pattern ten cents.

6400 Doll's Dress.—With the holidays approaching the dress of the doll becomes important. The one herewith offered is a one-piece garment, sleeves, body and skirt all in one and with the closing in the back. A wide belt completes the dress. It may be made of remnants of material or of challis.

The pattern 6400 is cut in sizes for dolls measuring from 14 to 26 inches in length. For a 24-inch doll it will require 1 yard of 27-inch material, 1⅝ yards of edging and ¾ yard of ribbon. Price of pattern ten cents.

6332 Misses' Dress.—This dress can be used for the small woman as well as for the miss. It closes at the front and can be made with either the long or short sleeves. The two-gored skirt can be made with either the Empire or regulation waistline.

Serge, cheviot or broadcloth can be used to make this dress with the collar and cuffs of contrasting material. Price of pattern ten cents.

5430 One-Piece Blouse.—The body and sleeve in one idea is the main character of this blouse. The collar is removable. An inexperienced sewer could make the blouse without the least difficulty and be well satisfied with the finished garment.

The pattern 5430 is cut in sizes 4, 6, 8 and 10 years. Medium size requires 1⅜ yards of 36-inch material. Price of pattern ten cents.

6356 Girls' Dress.—This little dress shows the stylish low-belted effect which is the newest thing in children's fashions. The short skirt is kilted and the blouse is fulled slightly into a stitched belt. The long or short sleeve may be used and the shield may be worn or omitted. A patent leather belt may replace the one of material if preferred.

The pattern 6356 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 2⅝ yards of 36-inch material. Price of pattern ten cents.

THIS LONG RANGE TELESCOPE FREE

This telescope when closed, as shown in the picture, is 12 inches long and has a circumference of more than 5 inches. When all five sections are pulled out it is 42 inches long. The lenses are carefully ground and adjusted by an expert at one of the largest factories in Europe. It is built of good materials and is brass bound throughout. A solar eye piece is sent with each telescope to be used in studying the sun and moon and other solar bodies. It is useful also as a magnifying glass.

See Objects Miles Away

With this telescope you can see distant objects which were invisible to the naked eye. Farmer's wife said she could see her husband plowing in a field six miles away. Dairyman found it a great help in watching windmill and cattle in distant pasture during hot weather. It saves long trips and useless worry by enabling you to see distant objects plainly.

Free Offer

We will send one of these 42-inch telescopes, free and postpaid, to all who send $1.50 to pay for a three year, new or renewal, subscription to THE IOWA HOMESTEAD; 156 big, helpful issues for $1.50—less than 1 cent a copy—and this big telescope as a premium.

We guarantee this telescope to please you in every way. We will refund your money at any time if it is not perfectly satisfactory. Address all letters to

THE IOWA HOMESTEAD,

Solar Eye Piece Sent With Each Telescope. Can be Used in Studying the Sun and Moon.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 10. Joshua 5:10-6, Dec. 7, 1913

THE FALL OF JERICHO.

Jericho was the Gibraltar of Canaan. Its towering bastions and gates of iron, with bars of brass, bade defiance to the invader. Even if its gauntlet could be run, no commander versed in tactics would leave such a citadel in his rear. Joshua would not intrust so important a matter to his most reliable lieutenant. He went in person to reconnoiter and plan the attack. While his eye was searching for some vantage ground, he was suddenly aware of a stranger's presence. Before him was a towering form of majestic mien, a naked sword gleaming in his hand. Every inch a soldier, Joshua clapped his hand upon his sword-hilt, advanced, and called for the countersign. In an instant he apprehended the truth—he had met an officer who outranked him. In a moment, with bared feet and prostrate form, he worshiped the commander-in-chief of all Jehovah's hosts, celestial and terrestrial. A plan of assault, novel and, humanly speaking, extremely foolish, was revealed to Joshua. The scheme was mortifying to a military genius. In this crucial test, Joshua's faith shines resplendent. He lays his military science at the feet of Jehovah's captain. Having made the Lord's plan his plan, he returns to put it into execution. Next day, under Jericho's walls, the strangest maneuver known to history was made. Israel's palladium, glittering in the sun, carried by priestly hands, as upon other occasions of special sanctity, was in the van. Seven priests, with ram's-horn-shaped silver trumpets, blew a defiant crescendo. Six hundred thousand troops marched, not upon, but around the citadel. From the walls, as from the gallery of a theater, the whole population of the beleaguered city viewed this strange spectacle daily for a week. On the seventh day, on the completion of the seventh circuit, the seven priests blew an extra loud and prolonged blast upon the seven horns; and at this signal, from six hundred thousand brawny throats, there went up a shout as if victory had already been achieved. That instant the faith of Israel had its reward. Those walls melted as the hearts of the defenders had already. Thus God put the key to Canaan in the hands of faithful Joshua that day. In the midst of universal ruin a fragment of the wall stood intact. On its summit, like an eyrie, was a hut, from whose little window a crimson-dyed cord swung back and forth. It was the house of Rahab. Then that city, the opulent commercial outpost of Canaan, the cup of her iniquity being full, fell a prey to the sword of justice, as wielded by Israel, Jehovah's executioner. Joshua's purpose was that this fortress-city should stand perpetually in ruins as a significant memorial of the retributive justice of God and the victory-achieving power of faith.

The Borden company has announced an increase of 13 cents per hundred for their milk, or $1.88, the highest price ever paid for milk in the city of Sterling, Illinois. The price paid for October milk last year was $1.55, making an increase of 33 cents per hundred over last year's prices. For the past seven months a premium has been paid. In April $1.71 was paid, an increase of 6 cents over the contract price. Next month the price was $1.46. In June $1.36 was paid or 16 cents above the contract price. The July price was $1.56 or 6 per cent raise, while the August price was $1.71 or 6 cents above contract. In September $1.76 was paid or 11 cents premium, and in October the price was $1.88 or 13 cents more than contract price. The average price for the seven months was $1.63.

The number of rabbits sent to the London market from Australia has become so great as to produce an oversupply and shipments have been discontinued.

Live Stock and Commercial Field Notes

Collected by Representatives of The Homestead

ON December 17th at Carroll, Iowa, J. T. Judge will make a public sale of forty-eight head of high-class Shorthorn cattle, nearly evorything in the sale being strictly Scotch cattle. It is an offering that we take pleasure in recommending to our readers as the cattle and the breeding are of the very best. He is offering twelve very choice and very classy Scotch bulls, everyone of which will make a splendid herd bull when matured. He is also listing thirty-six head of cows and heifers and twelve of these will have calves at foot. The bull that stands at the head of the herd is Sultan Standard, a Cruickshank Orange Blossom, and he was regarded as the best son of Imp. Whitehall Sultan, sold in the Frank Harding sale in 1911. This bull is the sire of most of the young bulls and heifers to be sold in the sale, and most of the cows are in calf to him. That Mr. Judge made no mistake in buying this bull is best evidenced by the high-class lot of young bulls and heifers that he will offer at this time. A picture of a group of Sultan Standard bulls will be seen this week in the copy of his advertisement which appears on page 31. Just a word this week about the splendid bulls he will offer in this sale. Diamond Sultan is a large roan, a January yearling sired by that noted Kilgore bull, Scotch Sultan, and he is out of that equally noted cow, Golden Nell by Golden Favorite. This bull was purcnased at a long price from J. A. Kilgore to breed on his Sultan Standard heifers, and now that his herd will be greatly reduced after the sale he has concluded he will sell him in the sale. He is the making of a very large bull and a good one, and some man who wants a herd bull will make no mistake in buying him. His great-grandsire is the noted Bapton Diamond and then comes the equally noted Bapton Ensign. He is a thick-fleshed fellow with a nice head and a drooping horn, and he will be liked by those who are in search of a herd bull. An unusually high-class yearling white bull in this sale is Sultan's March, and he is a son of Sultan Standard and his dam is the splendid cow, Gold Hunt Maid. Here is one of the very choicest young bulls that will be sold in any sale this fall. He is low set and wide out, with a splendid back and loin, a nice head and horn, thick in the quarters and low in the twist. He is in reality an outstanding young bull that is destined to make a great herd bull. Another great yearling Sultan Standard bull that will be sold in this sale will be King Major. He is also sired by Sultan Standard and he is out of Veronico 6th by the well-known show and breeding bull, Clear the Way. This is a red bull, a well-balanced fellow and really one of the very choicest young bulls in the offering. He is selling a younger white bull by Sultan Standard and out of Sunlight Lass that is some calf and we look upon this fellow to make a most excellent bull if he falls into good hands. There are a couple of Cruickshank Victoria bulls in the offering, both sired by Sultan Standard that look awfully good to us and they have every right to develop into excellent herd bulls. Just a word this week about the cows and heifers that he is selling. These are an unusually attractive lot of females bred along the most approved lines, and individually of a very high order. Twelve or fourteen young heifers are listed, most of which are sired by Sultan Standard. There will also be twelve calves that will be sold at foot with their dams. He is selling some splendid cows in this sale that are daughters of his former well-known show and breeding bull, Clear the Way, and a number of other cows that are sired by some of the most noted sires of the present time. We will tell Homestead readers more about his female offering in next week's issue. In the meantime write J. T. Judge for a copy of his catalog and kindly mention The Homestead. It will be sent only on application, so be sure to write for it right away.

ONE of the good sires in the Wm. Moderow herd, which by the way is one of the country's very best aggregations of Durocs, is the great boar, Moderow's Wonder. This boar is a sow sire of unusual prominence and his boars are good breeders, in fact we know of few places that we would rather buy a boar than to get a son of Moderow's Wonder. The value of a really great boar is his ability to sire good sows, in fact the most famous boars of the breed today are exceptional good sow sires. If looking for a boar to sire you a crop of pigs another season that will develop sows of the highest order, get a son of Moderow's Wonder and your want will be filled. The price is an attraction, write for it. Moderow's Wonder is sired by Uneeda Crimson Wonder, one of the very best of the breed, and his dam is Perfection Rose by the great Crimson Jack. He is a great boar as an individual. If interested write to Wm. Moderow, Beemer, Neb., for prices on the stock for sale. See page 37.

PROBABLY as good an opportunity to secure extra choice breeding stock for little money is being offered by F. S. Manning, Friend, Neb. The advertisement appears on another page of The Homestead and in that advertisement Mr. Manning states that he has a very fine lot of Hampshire fall boars, twenty-five in fact, and they are extra choice stock. Mr. Manning has been buying breeding stock from some of the best herds of the country and as he is a good caretaker, he is certain to have some good stock to sell. There are many boars in this lot that are really worth $50. They are big and smooth, with good bone and strong backs and are well marked, but as Mr. Manning is situated in the "dry belt" this season he finds that he will be kept busy buying feed for stock that he is compelled to carry over. For this reason he is offering the best of these twenty-five boars at the very low figure of $15 each and for a check of that size he will put one of the choice boars on board the cars at Friend. We wish The Homestead readers could see these boars, they are now about two and a half months old and will weigh from seventy-five to 100 pounds. That shows that they are good ones and we know that they come of as good breeding as the best breeders have to draw from. Mr. Manning will treat you right, but we would suggest that you get busy with the check book, for these boars ought to sell immediately at the prices asked. They also have a fine lot of great big, heavy-boned White Rock cockerels for sale. They are from a heavy-laying strain and are the property of Mrs. Manning. Send her $1.25 and surprise yourself with the big value you will get. When writing, kindly mention The Homestead.

THE writer called at the Enterprise Stock Farm, Rising City, Neb., a few days ago and looked over the Shorthorns that are to be sold at auction on December 30th. We want to say that C. E. Wade, the proprietor of the farm is some judge of good livestock. He has certainly demonstrated that he knew how to select a boar when he purchased the famous Poland China, Wade's Jumbo. Before that time he was laying the foundation for the present herd of Short-horns, and the females and bulls that he has employed are certainly a compliment to his ability. Probably as good an individual lot of cattle as has been sold in Nebraska during the twelve month are the ones that Mr. Wade will consign for this sale. About thirty head will be sold, comprising almost the entire herd, and including nearly all of the very best on the farm. Mr. Wade is keeping about four of the tops and an equal number of the more ordinary ones of the herd and all the remainder will sell. We want to say that we saw the sappiest lot of bull calves on the farm a few days ago that we have seen all season. They are about the same as was to be seen on this farm two years ago, and at that time they were generally regarded as the best lot of calves in the state. The calf crop is nearly all sired by Rosebud's Star, a bull used last season in this herd. He combined to a rare degree, extreme size and surpassing smoothness. The young bulls and heifers in this sale will prove that he was a great sire. The cows are all bred to, and some have calves at foot by Roan Goods 2d. He is a fine bull. Two years past and a bull of grand conformation, nicely turned and well filled in the quarters and crops and a good full loin. We like this bull. He will probably be offered and is a valuable specimen. He is an Eliza and carries a nice pedigree. We will have more to say of the offering in following issues of The Homestead, we want you to watch these announcements and please apply for the catalog now, that you may be certain of receiving it. A postal addressed as above will insure you getting it. Write at once.

BREEDERS of Holstein-Friesian cattle, or farmers who are interested in the improvement of their milking herds, will find some needed information in the advertisement of Elliott Bros., which appears on page 17. These gentlemen have for sale young bulls, ranging from calves to one year. Most of them are the get of Sir Gerben Pauline, a son of Gudultje Gerben Sir Fobes, and out of Bonnie Lass Pauline. This cow made the world record for her age at five years and two months. She made 33.8 pounds of butter in seven days, gave 2,540.8 pounds of milk in thirty days and 133.38 pounds of butter in thirty days. The grand champion cow at the National Dairy Show at Chicago last year was a sister to Bonnie Lass Pauline. The dams are excellent producers, most of which have official records. One of them, Hillcrest Empress Josephine, has a record of eighty-six pounds of milk in one day and 15,130 pounds in nine months at nine years of age. Aother, Erica Pietertje 2d, in an official one-year record, produced 15,000 pounds of milk and 573 pounds of butter. Rosie 5th, as a two year old, has an official record of 473 pounds of butter and 11,660 pounds of milk. Another of these cows is Gudultje Gerben Wayne, a good individual and rare producer. She is as good as her sister, a cow which, as a two year old, has a record of 642 pounds of butter. The bulls offered for sale have good size and excellent breed character although they may not look their best as they have been roughing it and have received no pampering or fitting. They are in perfect health and thrift. The tuberculin test is applied each year to the herd. For any additional information write to Elliott Bros., Woodward, Iowa.

IN a recent letter from G. H. Tutt, Marathon, Iowa, he says: "I still have some choice spring boars for sale and these are of the leading blood lines. They will weigh up to 300 pounds and are splendid individuals in every respect They are immune to cholera by the double treatment, have been well grown, and the price is within reach of anyone wanting a good boar. I also have a grand good lot of gilts and bred sows that I will sell privately. Now I will be pleased to hear from Homestead readers who want either boars or sows." When writing to Mr. Tutt kindly mention The Homestead.

IRVINEDALE Farm is becoming noted as being headquarters for superior Belgian horses. There are also a few good Percherons on hand at the present time. The farm is located at Ankeny, Iowa, only ten miles north of Des Moines, and is easily reached either over the C. & N. W. Ry. or the Ft. Dodge, Des Moines & Southern Interurban. Those who wish to inspect the stock will be met at trains if they notify Chas. Irvine, Ankeny, Iowa.

COLUMBIAN HOG & CATTLE POWDER, which is the subject of an interesting advertisement on page 10, is worthy of a special investigation on the part of farmers who raise hogs. The expression which heads the advertisement, "Don't bury your profits," is an apt one because farmers of the great Mississippi valley country have buried millions upon millions of dollars' worth of profits in the manner indicated in the advertisement. It is generally admitted that the great majority of hog losses have their origin in worms. Therefore any specific which effects the destruction of worms, means a saving of just that same proportion of hogs. The Columbian preparation is a worm destroyer and a conditioner. In order to introduce this preparation, the manufacturers offer to give any reader of this paper, free, one Columbian self feeder, such as is illustrated in the advertisement. All there is to do is to fill out the coupon in the advertisement and forward it to the Columbian Hog & Cattle Powder Co., Dept. 2, 1450 Genesee St., Kansas City, Mo.

ONE of the most popular herds of Poland China boars at the late Iowa State Fair was that of A. J. Banks. This popularity was evidenced by the fact that the fall boars offered for sale were snapped up at higher than average prices and early in the week. Mr. Banks made an excellent show and captured his share of ribbons. Now he is offering twenty great big spring pigs which carry the blood of Big Orange, Big Sampson and Colossus. He will sell them at reasonable prices. For further descriptions address A. J. Banks, Montour, Iowa. See advertisement on page 38.

ONE of the best public sales of Chester White hogs held last year was that of W. T. Barr at Ames, Iowa. Mr. Barr is more than upholding the reputation then made by having for sale spring pigs of either sex that are big, smooth, well-formed and have strong bones and unusual vitality. He sells them reasonable. Address W. T. Barr, Ames, Iowa.

EVERYTHING guaranteed as represented is the motto of W. J. Hartung, breeder of Duroc Jersey hogs, whose advertisement appears on page 37. We commend Mr. Hartung and his hogs to discriminating buyers. Address W. J. Hartung, Maxwell, Iowa.

ON December 16th, at South Omaha, Neb., C. A. Saunders will make a public sale of fifty or sixty head of Scotch and Scotch-topped Shorthorns, being consignments from the following well-known herds: J. G. Westrope, Harlan, Iowa; C. F. Mitchell & Son, Farragut, Iowa; R. A. Bixler, Corning, Iowa; N. D. Merrill, Creston, Iowa; Hariett & Hanora Wood, Wiota, Iowa; S. C. Beaver, Ulysses, Neb.; H. H. Hess & Son, Surprise, Neb.; Edgar Shoebottom, Fairbury, Neb., and C. A. and John Saunders, Manilla, Iowa. For a great many years Mr. Saunders has been making this South Omaha sale until now it is regarded as a permanent fixture, and he always has good cattle for the occasion. There will be about twenty-five or thirty bulls in the sale and about the same number of females, and a very liberal number of these will be straight Scotch. There will be quite a few that will make splendid herd bulls, and among these will be Sultan's Count, a son of the $2,500 bull, White Sultan, who in turn was a son of that noted show and breeding bull, Imp. Whitehall Sultan. His grandsire is Count Commodore, then comes the great bull, Imp. Fancy's Pride, and then that celebrated bull, Imp. Marquis of Zenda. He is a Cruickshank Victoria, a roan in color and the making of a good herd bull. He sells two other Scotch bulls and his son, John, lists two good young bulls, one of which is Scotch. R. A. Bixler sends one of the best young Scotch bulls in Mina Lad, a February yearling. He is a son of the Canadian bull, Ury Lad, and he is out of Imp. Dalmeny Mina 5th, a daughter of the great bull, Dictator. The dam of this bull is one of the best breeding cows that has ever been owned in southern Iowa. This bull is an outstanding good one and will make a most excellent herd bull. C. F. Mitchell & Son is selling his well-known show and breeding bull, True Cumberland 2d, and he is a son of the great Cumberland's Last. This bull is a white in color, and was third-prize bull at Lincoln this fall without any special fitting. He is a straight Scotch and belongs to the Wimple family. A yearling son of his also sells and his dam is Flora's Favorite by the noted show bull, Acanthus King. His great-grandam is Imp. Cluny Flora 79th, one of the best cows in the Woodford herd a number of years ago. This is a right good young bull and will be appreciated. J. G. Westrope sends two good bulls, one of which is a Cruickshank Victoria, and he is sired by American Goods, a son of Imp. Choice Goods. N. D. Merrill sells Gloster M., a son of Gloster's Favorite, and this bull is also a Victoria. Other breeders are listing some good bulls and a lot of well-bred cows and heifers. Many of these cows and heifers will be Scotch of the best families, and he will, therefore, have cattle that will meet the wants of everybody. There never was a better time to buy Short-horns, and we, therefore, urge those who want them to come out and attend this sale. Write C. A. Saunders, Manilla, Iowa, for catalog and mention The Homestead. See advertisement on page 29.

THE Holbert organization is well known wherever pure-bred draft horses are kept. This firm annually imports a very large number of Percherons, Belgians, Shires and Hackneys, and their trade extends into nearly every state in the Union. While they sell a large number of horses each year to smaller dealers they also sell a large number to buyers of individual horses. The large number that can always be found in their barns gives the buyer an opportunity to select the sort of a horse he likes. By importing in large numbers as this firm do the cost of importation is reduced to a minimum and this advantage is given the buyer. The Holberts are among the oldest importing firms now doing business in the United States, which is good evidence that they handle the kind of horses to please the American public and also that their business dealings have been satisfactory to their patrons. They always have on hand a large selection of stallions and mares of the different breeds and they will gladly answer any correspondence of our readers who will write them mentioning this paper.

THIRTY Holstein bulls are advertised on page 17 by Woodlawn Farm, Sterling, Ill. These youngsters are from one month to fifteen months of age, many of them out of record cows and sired by the outstanding bulls at the head of Woodlawn Farm herd, forming a choice lot of well-made and well-bred calves among which will be found bulls to suit all classes of buyers. These bulls, as well as a few cows and heifers, all from high powered ancestry, will be priced worth the money, as room is needed. Write today for list and particulars to Woodlawn Farm, Sterling, Ill., mentioning The Homestead.

GRAND champion Duroc Jersey swine are seldom offered at public auction and when they are it affords breeders an opportunity to get the best the breed can produce at whatever price they see fit to pay. H. E. Browning, Hersman, Ill., is holding a sale of Duroc Jerseys on December 18th and at that time is selling some grand champion sows. During the past year Mr. Browning made six shows winning thirty-two championships out of thirty-seven that he could show for and 124 first and second prizes. He won

ten grand championships and at the six shows there were four premier championship prizes all of which were won by Mr. Browning. Tattletale 33d, a junior yearling sow by Volunteer, was first at all the fairs except Des Moines and was second in that show. She was grand champion at the Illinois State Fair. This sow is a wonder, having a world of size, heavy bone, excellent back and is the type of a sow that should prove a valuable producer. Tattletale 30th is another daughter of Volunteer that was the first-prize junior yearling at the Iowa State Fair and second at every other show. She is a magnificent sow and fit to grace any herd. Lucy Wonder 190th is a senior yearling sow by Chief's Col. that was second at Wisconsin, Illinois, Minnesota and Peoria. Helen Blazes 52d is another senior yearling sow by Chief's Col. that was first at Wisconsin, Illinois, Minnesota and Peoria and second at Des Moines and Detroit. Miss Flora 3d is a daughter of The Chief's Col. that won five firsts and one second in the aged sow class and was the grand champion sow at the Minnesota State Fair, 1913. Lillian Russell is another aged sow by Chief's Col. that was third at the Illinois State Fair, 1912. Tattletale 37th was first and junior champion at the Illinois State Fair, 1913, the only place where shown. Tattletale 36th and Tattletale 39th were in the under year herd that won twenty first prizes at the leading shows this year. We doubt if such a collection of show sows which have made such remarkable winnings, were ever offered at public auction in one sale before. Most of them were bred to the noted show boar, Disturber. Mr. Browning will also sell ten under year sows by Defender, Superba and Volunteer and ten spring gilts by Volunteer. In the line of herd boars he will sell Sultan, a litter mate to Disturber, the grand champion under year boar of 1913, and the boar that headed Mr. Browning's undefeated under year herd this year. Sultan is sired by Volunteer and out of a dam by Chief's Col. He is a good lined boar of the right type and looks like he would make an impressive sire. He was never shown until this week when Mr. Browning is showing at the International Stock Show. Crimson Col. was first in class at the Wisconsin and Illinois State Fairs and at Peoria and won second at the Iowa, Minesota ad Michigan State Fairs. He has been shown at twelve state fairs during the part of two years and with one exception never stood lower than second place. He is sired by Chief's Col. and out of a Crimson Wonder 3d sow. High Private was first at Minnesota and Wisconsin, second at Michigan and third at the Illinois State Fair. Send bids to Carlos C. Palmer, Homestead representative, in care of Mr. Browning. Read the advertisement on page 30 and arrange to attend the sale or send a good bid on some of these prize winners.

OUR old friend U. G. Davidson, Algona, Iowa, sends change of copy for his Duroc Jersey boar advertisement which appears on pgae 32. He is offering immune fall boars at from $30 to $50 and spring boars at from $25 to $100. These are sired by Golden Model Jr., and Crimson Wonder Am I. In his letter to us he says: "I have had my hogs vaccinated with the double treatment from Ames and am now ready for business, so come on with your orders I have some fall boars that are all right and while not fat they will make splendid herd boars and I am pricing them where they will sell. My spring boars have also made great gains and I have some good ones for sale, weighing from 125 to 175 pounds. I have two cracking good spring boars of June 18th farrow, weighing from 160 to 175 pounds and they look like show boars to me if grown out right. I have some younger boars by Crimson Wonder Am I, that are the fanciest pigs I have raised in some time. Tell they boys to come and see these boars at once as I am now ready to sell and don't forget to tell them that everything is cholera immune and vaccinated with the double treatment." When writing Mr. Davidson kindly mention The Homestead.

HAMPSHIRE boars of fall and spring farrow are advertised for sale by A. L. Goodenough, Morrison, Ill. Mr. Goodenough is one of the oldest Hampshire breeders and for several years made an enviable show record at the Iowa and Illinois State Fairs. He has been breeding Hampshires along constructive lines, having used nothing but prize-winning boars for several years and as a result of his excellent judgment he has one of the good herds of this popular breed. He has a few good fall boars sired by Shelby Lad, a first-prize boar at the Indiana State Fair in 1911, and a few extra good spring boars, sired by Shelby Lad, Perfectum and Dudie, a winner at several state fairs and a sire of winners at the Iowa State Fair this year. This entire herd has been give the double treatment and for this reason is supposed to be immune from cholera. The boars are being priced at $25 each. At this price they surely worth the money. If in need of a Hampshire boar see the advertisement on page 32 and write Mr. Goodenough kindly mentioning The Homestead.

ON March 6th, J. B. Ashby, Audubon, Iowa, will make a sale of Hereford cattle at South Omaha, Neb., and he will offer fifty head on this occasion. There will be thirty head of bulls in the sale and thirty cows and heifers. The other day we called upon Mr. Ashby and looked over this offering of cattle and while it is a little early to begin talking about them, yet we want to acquaint our readers with what he expects to offer in this sale. There will be eighteen good yearling bulls, big, strong, well-grown, big-boned fellows, nearly every one having a nice head and horn and they are the kind that the breeders and farmers are looking for. The most of these bulls are sired by Clarmont Lad, his former herd that sold to Thomas Mortimer, Madison, Neb. This herd bull has been regarded as one of the best breeding bulls in the state, and his get in this sale will prove this assertion. He is also selling several of his very best show heifers including Clarmont Pet, 2d as calf and 2d as a yearling at Des Moines, also the great cow Helen 2d that sells with two good calves at foot and she is rebred again. He is also selling some great yearling heifers in this sale and they are about as good as you will find anywhere. In due time we will have more to say about the Ashby Hereford offering.

THE annual offering of Percherons at Gregory Farm, White Hall, Ill., Tuesday of next week by W. S. Corsa may well be called a sale of Carnot Percherons, for never before has so much of the blood of this grand champion stallion been offered to the public. Not only are the majority of the mares in the sale bred to him, but ten head of young mares and stallions by him are listed. This lot includes International Percheron Futurity and state fair winners and the enterprising breeder will not overlook this opportunity to secure some of the champion blood. We have already given much detailed information regarding this offering. There are forty-two head in the offering, and listed are both imported and American-bred mares of strong breeding and individual merit, the whole offering topped out by ten head, eight fillies and two stallion colts, the get of Carnot, that need to be seen to be fully appreciated. Don't overlook this sale. A visit to Gregory Farm is a day well spent, whether you buy any horse or not. The breeding operations being carried on there are well worth looking into. You can attend the Corsa sale and leave that night for Pekin, Ill., and attend the Robison sale of Percherons the day following and thus have an opportunity to visit two of the big Percheron breeding establishments of the country.

THE annual offering of imported Shire mares at Trumans' Pioneer Stud Farm, Bushnell, Ill., Thursday of next week, December 11th, will present to the public one of the strongest collections of mares and fillies of this breed that this reliable concern has yet offered to buyers. It is a quality lot throughout, and as has already been mentioned, includes all of their state fair and International winners and champions. Such an offering is always looked for at the Bushnell establishment. The Truman firm does not do things except on a broad gauge scale. The senior member of the firm, J. H. Truman, is constantly buying the very best animals to be found in England, and the accuracy of his judgment has been demonstrated times without number by the successes achieved in this country by horses he has purchased. Quality and breeding first, price a secondary consideration is his method, and as a consequence the horses that come to Bushnell are always a top lot. Those listed for the coming sale are the Truman kind in every sense of the word, and back of them stands a firm with a record of a third of a century of unblemished business dealing. It means something to buy a horse from so high-class a concern as Trumans' Pioneer Stud Farm, as you get the guarantee of a firm of the highest reputation for honesty and square dealing. Attend this sale and you will have an opportunity to see a horse show, as in addition to the mares to be sold there are in the stables at Bushnell over a hundred head of high-class Shire, Percheron, Belgian and Suffolk stallions for sale at private treaty. See page 34.

IN a recent letter from C. F. Mitchell & Son, Farragut, Iowa, they have the following to say regarding their well-known show and breeding bull, True Cumberland 2d, that they are sending to the Saunders South Omaha sale on December 16th. "We have hesitated selling True Cumberland 2d at all, but as we have to have another bull to use on his heifers, and as we don't feel that we can afford to keep two bulls, we therefore finally made up our mind to offer him in this sale. We doubt if you will find many better breeding bulls than this bull. We expect to show two calf herds sired by him next year and we think we will beat any record we have yet made with him. We never specially fitted him as we did not want to injure his usefulness, and yet he was always close up to the top in breeding condition. Had we fitted him just for show it would take a good bull to beat him. Here is a bull that we sincerely hope will be appreciated and we know that he will make some breeder a great herd bull. We also sell one of his sons that will also look good to the boys on day of sale."

DUROC Jersey boars of the best of breeding and of excellent individual merit can be purchased from C. A. Moulton, Morrison, Ill., at very reasonable prices, considering their quality. He has twenty boars of March and April farrow sired by S. E.'s Premier Col. by Premier Colonel, Captain Model by Golden Model, and Success by S. E.'s Premier Colonel and out of Helen's Duchess by Chief's Colonel. A Homestead representative recently visited this herd and can strongly recommend these boars as being good enough to please anyone. They are weighing from 200 to 235 pounds each, have plenty of bone and are very smooth. If anyone in need of a good Duroc Jersey boar will send Mr. Moulton a check for $35 he will get a boar worth much more, and if upon the pig's arrival should the purchaser be dissatisfied he can return the pig and get his money. This is a fair proposition for the buyer and our readers will find Mr. Moulton a high-class gentleman with whom to deal. There is no swine disease in this community. See page 32 and in sending him your order kindly mention The Homestead.

A CONSIGNMENT of Percheron stallions and mares which includes animals of superior quality, was recently brought over by R. Wilkinson & Son, whose announcement will be found on page 35. These horses were selected by a member of the firm in person with the view to bring just the sort which would satisfy the demands of the best class of buyers. While no attempt was made to make cheapness a point in the purchase, the situation of the Messrs. Wilkinson and their methods of care and handling have reduced the cost problem to a low point and they are going to give buyers the advantage of the savings made. They guarantee more quality and horse for the same money than anyone else. They invite personal inspection. Address R. Wilkinson & Son, Mitchellville, Iowa.

EVERY once in a while a representative of this paper finds a herd of Poland China hogs which, while possessing a great deal more merit than the average good herd, has been built up so quietly as to attract little attention. That is just the situation with the herd of J. H. Cope, at Carlisle, Iowa. Mr. Cope has a lot of great big, growthy, symmetrically-formed and healthy spring boars that are good enough to assume places at the head of high-class herds. Mr. Cope, however, wants to get them out of the way of his fall crop and for that reason is offering them at farmers' prices. They cannot remain long unsold at the figures he will name. Write him at once for descriptions.

ON December 18th at Clio, Iowa, will occur the joint breeders' Short-horn sale from the herds of A. W. Barker, Clio, Iowa; W. Preston Donald, Clio, Iowa, and W. L. Ritchie & Son, Allerton, Iowa. These well-known breeders are selling a most excellent lot of cattle in this sale, among which will be thirty head of Scotch, of the very best families. In point of Scotch breeding and individual merit it is the best lot of cattle that has been sold in Iowa in these many years. There will be forty-four head in the sale made up of thirty-seven head of cows and heifers and seven head of bulls. Mr. Al Bark-

er, who is the largest contributor, is selling twenty-four head, including his herd bull, Avalanche 2d 312576. Mr. Barker has had one of the best Scotch herds in southern Iowa, and everything he is selling except two or three are Scotch cattle. It will be remembered that he formerly owned the splendid bull, Choice Goods Jr., that was one of the best sons of Imp. Choice Goods, and he was out of Imp. Elsa, that at one time sold in the Smith sale at Allerton, Iowa, for better than $1,000. This bull also sold in the Smith sale as a youngster for $1,000, and he afterwards became a splendid breeding bull, and many of the best females Mr. Barker is selling are sired by him or are out of cows that were sired by him. He is selling his present herd bull, Avalanche 2d, a Cruickshank Secret, sired by old Avalanche. His dam is by Imp. Ducal Crown, and his grandam is by the Bellows bull, Scottish King. He is a large red bull and Mr. Barker has used him with success, and most of the heifers he is selling will be sired by him. Among the splendid females he will offer is Ury Maple 3d, a cow bred by H. C. Duncan, of Missouri. She is an eight-year-old cow, and is a daughter of old Headlight. Her grandsire is the $1,000 bull, Baron Dudding, and then comes the great Baron Rule. This cow is a Campbell-bred Ury, and a good one and she is the dam of some of the best bulls that have ever left the Barker herd. She is well along in calf again to Avalanche 2d. Another splendid cow is Elmira, a five-year-old daughter of Scotch Goods, and her dam is Imp. Elsa, that we referred to above as the dam of Choice Goods Jr. A good roan cow that he is listing is Duchess of Clio, a five-year-old daughter of Choice Goods Jr. and traces to Imp. Duchess of Fife. She is one of his very best and is well along in calf to Avalanche 2d. An excellent roan heifer out of her and sired by Avalanche 2d goes in bred to Tennessee Banff, a well-bred Augusta bull. Another large roan cow he is selling is Ury's Choice, a five-year-old by Choice Goods Jr. She is one of his very best breeding cows. Her daughter, Ury's Choice 3d by Avalanche 2d, also goes in as well as a few others of this same family. Orange Miss is a daughter of that noted bull, Baron Dudding and she is a royally-bred Cruickshank Orange Blossom. She is well along in calf again to Avalanche 2d. Two yearling twin heifers by Avalanche are out of this cow and they are very choice. Another good cow he is selling is Lady Athene 2d, a five year old and sired by Choice Goods Jr. She belongs to that well-known Athene family, and she is strictly all right. Her half sister sired by Avalanche also goes in. Both of these have good yearling heifers in the sale. There will be five of these Athenes from the Barker herd, and they are among the best he will sell. W. L. Ritchie & Son will sell sixteen head, among which will be a number of Scotch cattle. One of these is Athene 3d, a splendid three-year-old cow by White Sox, a son of Choice Goods Jr. She is another one of those good Athenes that will be listed in this sale and she will calve shortly after sale time. Her dam, Athene's Last, a daughter of Evening Star, and one of their best breeding cows also goes in and she is safe in calf to their present herd bull. They also sell a well-bred Princess Royal and an Acanthus cow, and a few others that have four or five good Scotch tops on them. They are listing their present herd bull, Doy, a son of Gordoy Wayne, and three nice young bulls. Mr. Donald is selling three June and July bull calves, and they are among the best of the young bulls that will be offered. These are all sired by Choice Lad, a son of Baron Gloster. One of the best of these is a July calf, a very thick, well-meated fellow, and he is a calf that is well balanced from one end to the other. He also has a good roan calf and another good red bull. The offering as a whole is a well bred one, and it will be a most excellent place to buy Scotch cattle and buy them at your own figures. We know whereof we speak when we say that cattle in this section of the state never bring what they are worth and we, therefore, insist that you will find some great bargains in this offering. Clio, Iowa, is the first town south of Allerton, on the C. R. I. & P. short line from Des Moines, and good connections can be made from north and south. Write A. W. Barker, Mgr., Clio, Iowa, for catalog and kindly mention this paper. See advertisement on page 33.

A STUDY of the catalog for the sale of Percherons to be made at Leslie Farm, Pekin, Ill., Wednesday, December 10th, by A. L. Robison & Sons reveals a line of breeding that cannot be surpassed. When to this is added the fact that the animals in the offering are of outstanding excellence in every particular it should be apparent to every reader of this paper that the coming sale is an event of far more than ordinary importance. There have been many sales of good Percherons at Leslie Farm, but never has there been presented so choice a lot as will go through the ring December 10th. In fact at no sale in the recollection of the writer has their farm offered so many strictly choice mares as are cataloged for this event. The very best type of mares to be found in France were purchased by Archie Robison, including a number of noted winners and in addition there is listed some of the best specimens that the breeding studs of this country have ever produced. In every sale will always be found a few superior animals with a large percentage of common ones. This is not the case with the Robison offering. Everything in the sale is right, and the plainest horses in the offering would be outstanding propositions in the average sale. There are thirty-one mares and fillies in the offering, twenty of them imported and we doubt if their equal has ever before been submitted in a sale by the firm. As an evidence of the excellence of the Robison horses we may say that at the 1913 Illinois State Fair this firm won in the open classes in the Percheron show, first and second on three-year-old mare, second prize produce of mare, third prize best three mares, fourth on get of sire, third on yearling stallion and in the American-bred classes they won second and third on aged mare, fourth on yearling mare, first, third, fourth and fifth on filly foals; first, second and fourth on stallion foals; second and third on yearling stallion, and first and third on produce of mare. The majority of the animals they exhibited are listed for this sale, so the public can see they are getting more than an even divide of the good things at Leslie Farm. Eight of the imported mares were served in France by Government-owned stallions, and the balance of breeding age have been served by Moulinet, champion of France in 1909 and now at head of Leslie Farm stud. Rabelais, one of the best sires ever at Leslie Farm, and a half brother to Calypso and Casino; Jayet by the $5,000 Avocat that sold to the Argentine and a young stallion of great promise. The American-bred mares in this offering are the best Leslie Farm ever offered, are out of the best brood mares on the farm, the get of Moulinet, Rabelais, Hisse Hunt and Kanois, a son of Moulinet. A number of the older ones are broken to work, and all should be as good producers as can be found. The filly foals in the sale number some of the best ever dropped on Leslie Farm, and the stallion colts are the get of Moulinet and Rabelais and are a credit to their distinguished sires. If you are in the market for the very highest type of Percherons attend this sale, as you will find at it the class of animals you are in search of. This sale follows that of W. S. Corsa at White Hall, Ill., and there will be sleeping car accommodations between the two sales. The final announcement appears on page 32.

W. F. HOLCOMB, Mgr., Nebraska Poultry Co., Clay Center, Neb., is starting an advertisement in this issue in which he announces that he has a grand lot of turkeys for sale. He offers choice selections of three breeds. The Bourbon Reds, Mammoth Bronze and White Holland. Mr. Holcomb is a veteran poultry breeder and he has at this time propably the best lot of turkeys to be found on any farm anywhere in the middle West. These turkeys have been grown out on the open range, and they are hardy and vigorous. If wishing to buy anything in the way of improved poultry of any breed write Mr. Holcomb. He will have something to say that will interest you. He also has a model poultry house plan that he will give to readers of this paper that mention this paper when writing. We will have more to say of this poultry house later. We have seen it, and it is a dandy. Write today. See advertisement on page 15.

POLAND China men generally will be interested to know that Thos. A. Shattuck, Hastings, Neb., is still in the Poland China business. His herd, which was one of the good herds of the entire country, was nearly swept away this fall with disease. However, he has a few of the best sows left and has some three or four young boars that are as good as we have ever seen on the Shattuck farm. Two choice boars by Jumbo Chief by Jumbo Pan were saved and three boars sired by Momentum were also brought through. Momentum is the sire of the celebrated Big Tom, also the sire of the first-prize junior year boar at South Dakota fair this season. This latter boar is the property of W. J. Graham, Howard Lake, Minn., and is a full brother to Big Tom. Mr. Shattuck recently shipped a boar to the East, and sent out one of the best on the farm, yet it would be a big question to decide which is really the best of the few young boars left. There will be some good stock here another season, and ere long this herd will be back to the position formerly held. Sampson, one of the former herd boars is now owned by the state agricultural college at Lincoln. He will do a good work for them.

BOYER'S Chester Whites advertised on page 32 have gained popularity because of the enthusiasm of the manager of the herd and the quality of the animals kept. Writing under recent date, the Messrs. Boyer say, "We positively will not sell any of our sows or gilts before our bred sows sale of February 10th. All our best sows and gilts will be put into this sale. Our boar trade is picking up now. We average the sale of one hog every day and buyers are more than pleased with their purchases. We still have on hand some forty odd head of big, growthy fellows with big bone, lots of stretch and good quality. Among them are some extra good herd headers. We ship these boars C. O. D. or on approval to anyone giving good reference, pay express charges and have them recorded in the purchaser's name free. We do not claim to sell the cheapest, but we do say that if we fail to give the purchaser the worth of his money, he can return the hog to us at our expense and it will cost him nothing. Our hogs are in perfect health and there is no disease in this locality." Chester White breeders, who wish to obtain catalogs of the sale may have their names put on the mailing list by writing to B. M. Boyer & Son, Farmington, Iowa.

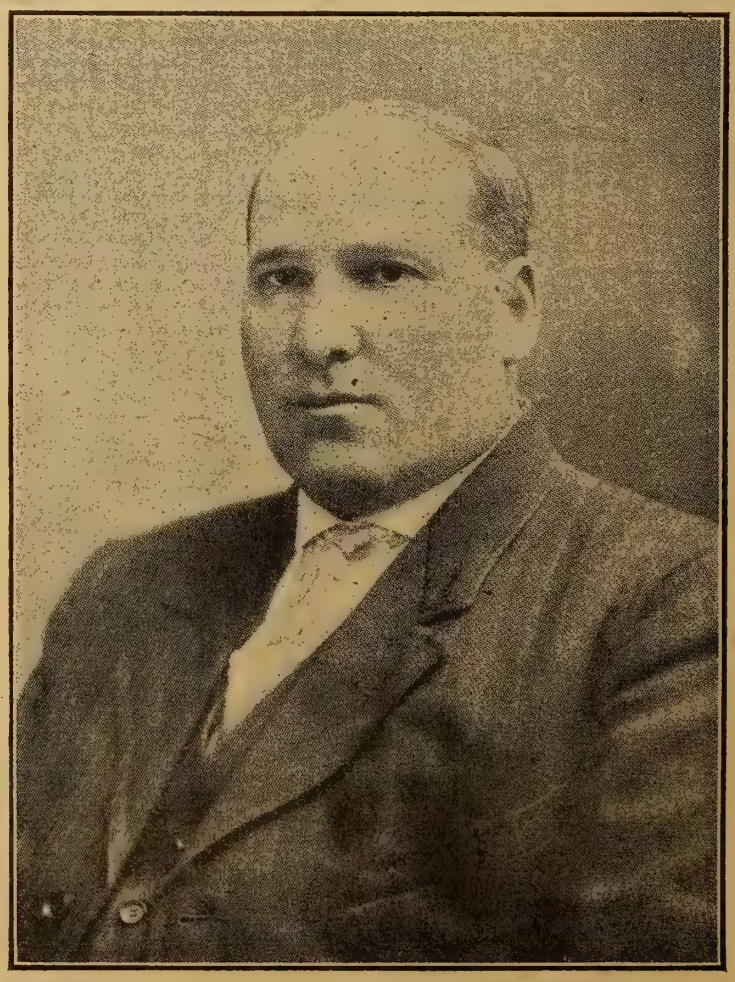
THE writer recently called on the veteran stockman and banker of Genoa, Neb., and spent some time in visiting with him and looking over the herds and flocks. We refer to O. E. Green, of that place. Mr. Green is certainly the sort of business man that the breeds of pure-bred stock need. He is a man that has made a distinct success of life in a financial way, and as a neighbor and citizen he is one of the most honored of a wide section of country. He has always been a strong advocate of better livestock, and has backed his convictions with hard cash. His herds of pure-bred stock have made him money, and at the same time they have been a source of enjoyment, as they of a right should be to any good stockman. Mr. Green at present maintains one of the best herds of Herefords within the state. His herd is headed by two of the greatest bulls to be found in one herd. They are Beau Mischief and Parsifal 16th. They are both sires of more than ordinary note, and are extra good individuals. Beau Mischief is one of the largest of the Anxiety bred bulls to be found anywhere. The other bull is also a bull of much scale, but not so extremely large as Beau Mischief. Mr. Green is selling some nice bulls and a few very choice females in the sale at Denver during the week of the Denver show. He will also sell some very fine bulls and a few females in the Hereford sale that will be held at Grand Island, Neb., on February 19th and 20th. Mr. Green maintains a fine herd of Durocs and will make a sale of bred sows on February 9th. This sale will consist of stock bred by Mr. Green, and they will be a good, even, growthy lot of stock. We would like you to keep this sale in mind, and remember the date. We will have more to say in following issues of The Homestead.

WE ARE this week calling attention for the last time to the sale of Short-horn cattle that will be made by Blank Bros. & Kleen, Franklin, Neb., on December 10th. We have made mention of this offering before, having gone into detail concerning many of them, and this week we will only say that this sale will be a good place to get good cattle and at prices where they should prove good investments. The writer wishes to see a good attendance at this sale, and we believe that it is to the interest of those that are in the market to attend. Plan to be on hand. There will be offered a lot of good bulls and a good line of money-making females.

BIG-TYPE Poland China boars and gilts can be purchased from H. Crabtree, Baxter, Iowa. He informs us that he has enjoyed an excellent trade

NEXT WEEK'S SALE PROGRAM

Monday, December 8	Herefords, W. E. Hemenway & Son, Steward, Ill.
Tuesday, December 9	Short-horns, J. A. Richardson, Wall Lake, Iowa. Shire Horses, J. A. Sage, Ankeny, Iowa. Percheron Horses, W.S. Corsa, White Hall, Ill.
Wednesday, December 10	Short-horns, Blank Bros. & Kleen, Franklin, Neb. Percherons, A. L. Robison & Sons, Pekin, Ill. Short-horns, C. A. Oldsen, Wall Lake, Iowa.
Thursday, December 11	Shire Mares, Trumans' Pioneer Stud Farm, Bushnell, Illinois.



J. C. Huckstep, Eolia, Pike county, Mo., is one of Missouri's noted breeders of the Mammoth Jack and Jennet. See reading notice on page 30.

NO MORE BROKEN OVER CHECKS---

No more sore mouths—no more strained neck-muscles—no more trouble from stumbling—no more driving troubles, if you will equip **YOUR** harness with

THE HUMANE CHECK REIN

It fits any harness—just bolt it to the back-band. Can be adjusted to tough or tender mouths. Gives with every step. Permits your horse to lower his head to rest his neck or to pull a hill or mud-hole. Lets him travel freer and farther with less effort, brings him in fresher after long trips.

Saves Feed, Saves Whips, Saves Horse-Energy, Saves Your Temper. Most Humane Rein Ever Invented.

Send for circular containing full particulars, prices, descriptions and guarantee of money back if not satisfied. Address

S. C. Beaver, Ulysses, Nebraska
H. H. Hess & Son, Surprise, Neb.
Edgar Shoebottom, Fairbury, Neb.

INCLUDED in this sale will be a choice lot of Scotch and Scotch-topped bulls, ranging in age from yearlings to four and five year olds. Among these are some show and breeding bulls of outstanding character that are splendid herd bulls or the making of such. Among the best bulls to be sold will be True Cumberland 2d, a son of the great Cumberland's Last; he was third-prize bull at Lincoln this fall, a straight Scotch and belongs to the Wimple family. C. A. Saunders sells Sultan Count, a richly-bred Cruickshank Victoria, and R. A. Bixler sells Mina's Lad, an outstanding herd bull proposition. A number of others are equally good. There will be a splendid lot of cows and heifers in this sale and a liberal number of these will be Scotch. There never was a better time to buy cattle and it behooves you to be sure to attend this sale. Write for catalog at once and mention The Homestead. Address

Cols. Woods and Kraschel, Aucts.

C. A. SAUNDERS, MANILLA, IOWA

this fall and that his Polands have been giving satisfaction to their buyers. If in need of a good boar or gilt write Mr. Crabtree as per advertisement on page 39. When writing kindly mention The Homestead.

ONE of the more important sales in Duroc circles for some few weeks is the sale of Gold Dust Chief by J. C. Theobold, Ohiowa, Neb., to Wm. Moderow, Beemer, Neb. Mr. Theobold lost much of his herd the past summer and fall with disease and as he had four herd boars decided to let one go. Mr. Moderow is always in search of the best and has thus annexed another boar. Gold Dust Chief was used in the herd of Fred Steinbach for some time and sired some of the best Durocs in Nebraska while in this herd. In the Steinbach dispersion he was purchased by Mr. Theobold. He is one of the very few remaining sons of Ohio Chief, and really one of the very best breeding sons of the old boar that we ever knew of. Mr. Moderow will probably have some sows bred to him in his winter sale. They will positively be good property, as those that have owned sons and daughters of Gold Dust Chief are loud in their praises of this stock. Mr. Moderow will now sell a son of Blue Ribbon Model that he bought back not long ago. This boar is a spring yearling and smooth and well finished. He is the same type as his sire and he was sired by Golden Model 2d. We would advise buying this young boar, for he is right, and were it not for the fact that Mr. Moderow has Blue Ribbon Model, he would not be for sale at all. Some extra choice spring and fall males are also for sale from the Moderow herd, and we want to say that this herd is a good place to buy stock from. Mention The Homestead if you write.

AMOS TURNER, Wilber, Neb., owner of one of the real good herds of O. I. C. swine of Nebraska states that he is about sold out of those good boars. He has only a half dozen good ones left and those wishing one had better make arrangements for one immediately as this will be the last call for them. He is offering a big lot of immune sows however, and they are nearly all bred to White Hope, the first-prize boar at the Nebraska State Fair this season and also won at other leading shows. Some sows are bred to Combination's Last, one of the good boars from the Kent herd. Mr. Turner is selling his stock at a price that stockmen can afford to pay, in fact they can much better afford to buy this good stock at the prices asked than to buy inferior stock at much less, for with the high price of feed of all kinds it will only display good business judgment to buy as good machines as possible to convert this same feed into high-class pork. Mr. Turner has the stock you are looking for. Write him, and kindly mention this paper. See advertisement on page 32.

SHARPLES milkers are accumulating popularity among many of the more extensive dairymen. There are a great many reasons why they do so. One of these is the fact that with but a single operator from thirty to forty cows may be milked per hour. This means a saving of extensive help. A great volume of information concerning the use of the milker may be obtained by addressing a request for the milker book to the Sharples Separator Co., West Chester, Pa. See advertisement on page 17.

H. O. HOUGLAND, Story City, Ia., advertises Duroc Jersey hogs on page 37 of this paper. He has a splendid lot of twenty spring boars that will weigh from 200 to 225 pounds each, although not fat. They are good, big-boned fellows, carrying popular strains of blood and in perfect health. Write him for the low prices which he is quoting in order to dispose of them quickly.

DIRECT from factory plans of selling farm machinery have been the means of effecting great saving to farmers during the past few years. One of the pioneers in this method of dividing profits with the farmer is Galloway, whose big advertisement occupies page 40. In this issue Mr. Galloway is exploiting the Galloway spreader. In this day of soil improvement, a manure spreader is recognized as one of the most valuable farm implements. It not only saves labor, but it effects a distribution of manure in such a manner as to secure its benefits to every part of the land surface. The Galloway spreader is, as Mr. Galloway says in the advertisement, a good one. He not only says so, but he offers to prove it to anyone who is at all interested. To begin with, he has done what few other manufacturers have attempted. He presents the spreader attachment, which may be used in connection with any running gear and which sells at the remarkably low figure of $39.50. This means a saving of from $25 to $45 and that is quite an item. But there are nine different styles and sizes to select from. A complete spreader of the biggest size is sold for $89.50 and between that and the first mentioned attachment, there are variations in sizes and prices that must suit anyone. Now you don't have to pay cash out for these spreaders. You buy them on a thirty

days' free trial offer. You buy them with the agreement that if they are not in every respect just what Galloway says they are, they don't cost you a cent, and you don't have to keep them. By the way, Galloway also makes gasoline engines, cream separators and other sorts of general merchandise, clothing and machinery; and these are sold on the same liberal terms. You may obtain a catalog of each or all by placing a check mark opposite the names quoted in the coupon in the advertisement, filling in your name and address and forwarding it to Galloway Company, 19 Galloway Station, Waterloo, Iowa.

SUNSHINE safety lamps have entirely solved the problem of safety of gasoline as an illuminating material. The Sunshine has no wick, no chimney, no dirt, no odor, no mantle and no trouble. It can be handled as easily and as safely as a common coal oil lamp. It affords a 300 candle power and can be operated at a cost of one-third of a cent per hour. That looks like economy. For prices or other information address Sunshine Safety Lamp Co., 2237 Factory Bldg., Kansas City, Mo.

ON December 19th, A. W. Joy, Herman, Neb., will make a closing-out sale of his large-type Poland Chinas and it will be a great place to buy some real high-class hogs. Andy Joy has been one of the very best breeders in eastern Nebraska and now that he is retiring from the business he will certainly have some splendid things to offer. He will sell ten extra choice brood sows and

60 POLAND CHINAS
AT AUCTION

At Pike Timber Stock Farm

BELMOND, IOWA, TUESDAY, DEC. 16, '13

BIG-TYPE POLAND CHINA BOARS

WE are putting into this sale 60 typical big type boars that have style and smoothness combined. They are the get of our great herd boar Big Wonder 180955 and other sires. Their dams are by Jumbo 170495. All are in perfect health and thrift. Usual accommodations. Col. J. A. Benson, auctioneer. Catalog ready.

DAVENPORT & MACK, BELMOND, IOWA

these are strictly all right. He will list from twenty to twenty-five spring gilts that will average from 250 to 275 pounds and they are all that a man could ask for. These will be sired by Hadley Gold Dust, Henry Expansion, Half Ton Wonder and the well-known boar, Sampson. We saw these gilts some time ago and will say to Homestead readers that they are right in every way. His sows are also splendid brood sows and he is also selling a number of good boars. His offering is all that we say it is and we will stand behind all we have said about it. We cannot help but think here will be a great place to buy some high-class Poland China brood sows, spring gilts and good boars. Included will be his splendid boar, Half Ton Wonder, a son of Hillcroft Half Ton. This boar was 5th prize boar at the Nebraska State Fair in one of the strongest classes shown at that fair. He is a good large-type boar and a good breeder. Make it a point to get his catalog at once and then if you want anything be sure to get to his sale or be represented with a bid. Our M. T. White will attend the sale and will care for any bids sent in his care. When writing him kindly mention The Homestead.

THE Good Luck herd of Poland Chinas advertised on page 39 is a herd which has for twenty years or more borne an excellent reputation as a source of supply of Poland Chinas which carried size, finish and breed character. At the present time forty head of fall and spring boars of the more desirable sort are offered for sale. Descriptions may be obtained by writing to L. S. Fisher & Son, R. 1, Edgewood, Iowa.

FOR thirty days only, Harry Hurless, Ogden, Iowa, will sell the highest class of big, growthy, well-formed Chester White boars at reduced prices. The Hurless herd is one of the good ones of the state. The buyers have always found the best quality of pigs in it. Write him without delay.

WITH this issue of The Homestead, D. S. Cochran, R. F. D. 7, Lincoln, Neb., is starting an advertisement in which he offers a select lot of Duroc Jersey gilts and they will be sold either bred or open. These gilts are of excellent breeding and are good individuals. They will be bred to the great Royal Wonder, one of the really great breeding boars of the breed today. He is probably the best son of I Am A Crimson Wonder 2d in use, and we want to say that he is a breeding hog of unusual excellence. A gilt bred to this boar will absolutely make good. A few are bred to other young boars. Mr. Cochran also offers a few late spring boars, all of good breeding and good colors and are good individuals. They will be put on board the cars at Lincoln in good crates and for $20 to $25 each. The $20 ones are not poorer boars, but are younger. Send order without delay and you will surely get good value. There are also a nice lot of early September pigs for sale and they are all by Royal Wonder. We do not think that better values than these pigs have been offered this season. They go while they last at $10 to $12.50 each and will ship either sex. This is the way to get the good stock at little expense. Write without delay and mention The Homestead.

GENASCO asphalt roofing boasts peculiarities which renders it especially valuable as roofing material for farm buildings and in water proofing foundation walls or other sections of buildings that are the better for the water proofing. Asphalt is a natural wood preserver. It preserves fence posts, underpinning, troughs or bridges. It prevents the corroding of iron. But its importance in these points is second to that which it occupies as the dominant material in roofing. See advertisement on page 13 and for further particulars write to Barber Asphalt Paving Co., Chicago, Ill.

KENDALL'S Spavin Cure is a remedy which should be kept in every farm medicine chest. It is serviceable in the cure of curbs, spavins or ordinary lameness of horses. It is sold at the low price of $1 and may be secured at druggists or ordered direct from Dr. B. J. Kendall Co., Enosburg Falls, Vt. See advertisement in page 16.

IN last week's issue we made announcement of the C. A. Olsen Shorthorn sale which is to be held at Wall Lake, Iowa, on December 10th, and we want to once again emphasize the fact

BROWNING'S DUROC JERSEY

ANNUAL HOLIDAY SALE

HERSMAN, ILL., DECEMBER 18, 1913

50 KINGS AND QUEENS OF THE BREED

INCLUDING OUR GREAT SHOW HERD OF 1913. LOOK OVER THE LIST. DID YOU EVER SEE AS MANY GOOD ONES GO UNDER THE HAMMER IN ONE SALE?

COL. CRIMSON 41315
Sired by Chief's Col., and his dam by Crimson Wonder III., his second dam by Educator and his third dam by Proud Advance. Exhibited in all the big shows of 1912 and 1913 and never below second.

SULTAN 48901
Sired by Volunteer, dam by Chief's Col., second Mc.'s Dream, litter mate to Drafted, our grand champion under year boar that won five firsts and two grand champions in 1913, headed fifteen first-prize herds and was in five first-prize herds.

HIGH PRIVATE 44031
Sired by Volunteer, dam Lucy Wonder 109 by Educator, second by Proud Advance; third dam Lucy Wonder XXI. 35240n, out of Lucy Wonder 6334; grand champion Columbian Exposition, Chicago, 1893. This boar was winner in our 1913 shows.

MISS FLORA 80256
Winner in our 1912 and 1913 show herd, bred to Chief's Col. Sired by The Chief's Col., out of Florazel V. She comes from the show blood of the Mahan herd. She is a producer of good pigs. One of her pigs is in use at the Ohio Experiment Station herd.

Spring Boars by DISTURBER
One out of a Tippy Col. dam, one out of a Pal's Col. dam, three out of a Defender dam, two spring boars by Volunteer, one out of a Chief's Col. dam, one out of a Defender dam. Herd heading material bred right.

Sows by the GREATEST BOARS
Of the breed, Model Wonder, Superba, Defender, L. E.'s Valley Chief, Disturber, Volunteer and Prince Educator. Mated to Chief's Col., Disturber, Fashion Col. Crimson. Sows and gilts that will make your herd famous by the produce they bring forth.

TATTLETALE XXX.
TATTLETALE XXXII.
TATTLETALE XXXIII.
Winners in our 1913 show herd. Junior yearlings sired by Volunteer, out of a Defender dam, and bred to Disturber and Chief's Col. These sows are the big, stretchy kind that has made history for the Durocs. You can't buy these kind too high.

TATTLETALE XXXV.
TATTLETALE XXXVI.
TATTLETALE XXXVII.
Under year show sows, winners everywhere shown in our under year triumphs. Sired by Volunteer, dam by Superba. Three as royal sows in breeding and conformation as was ever driven into a sale ring or a show ring.

Send for illustrated catalog; it is full of the cream of the breed. Send bids to Carlos C. Palmer, Homestead representative, in my care. Aucts.—Reppert, Igleheart, Kraschel, McGowan and Irwin. Address all inquiries to

H. E. BROWNING, Hersman, Brown Co., Ill.

Closing Out Sale
POLAND CHINAS
Herman, Nebraska
December 19, '13

I am selling ten of the best brood sows in the state of Nebraska. **21 Choice Gilts** that **will average from 250 to 325 pounds.** Also my herd boar, **Half Ton Wonder,** 5th prize boar at Lincoln. Everything goes. Write for my catalog and mention The Iowa Homestead. Address

A. A. JOY,
HERMAN - NEBRASKA

Col. E. Z. Russell, Auct. M. T. White, Field Man for Homestead

that he is selling a most excellent lot of cattle. A limited number of these are Scotch of the best families, but the most important feature of this sale is that they are good cattle. Individually and collectively they are a great bunch of well-bred, well-fitted and useful Shorthorns. He is selling ten young bulls in this sale and while only one of these is Scotch, yet they are a great bunch of bulls, and not a poor one in the entire offering. These bulls are all reds and roans, well fitted and well grown, and there are some splendid herd bulls among the bunch. He is selling a grand good lot of cows and heifers among which are daughters of the great Imp. Scottish Pride, Ceremonious Archer, Best of Goods, Gondolier, Cumberland 2d, Victoria's Sultan J. Maringo, Gipsy King and other good bulls. The individual merit of the Olsen cattle is such as will impress itself upon those who are wanting good cattle in nice condition, and anybody will be dissatisfied with his offering when they go to his sale. His sale will be the day after the J. A. Richardson sale and breeders can attend these two sales with the same cost. Write for his catalog at once and kindly mention The Homestead.

LEE BROTHERS, Harveyville, Kan., the well-known breeders of Percheron horses are claiming January 27th as the date of their annual sale. On the above named date these breeders will sell forty head including their entire show herd with the exception of their great herd stallion, Scipion. This sale will be held in the new sale pavilion at the Kansas State Agricultural College, Manhattan, Kan., where these breeders made their very successful sale last December. Our readers will recall the remarkable record made by Lee Bros.' show and herd in the various great western shows this year, including the American Royal, and can readily appreciate the class of the offering that will be presented in this great sale, when the announcement is made that the entire herd will be included in the offering with the exception of the undefeated champion, Scipion, their great herd stallion. Bear this herd and sale date in mind and plan to be in Manhattan on January 27th. In writing for further information kindly mention this paper.

PERHAPS to a greater extent than is the case with other sorts of farm machinery, the effectiveness of the incubator depends upon the principles with which the general farmer is not familiar. This fact accentuates the importance of an incubator which is built upon scientific lines adapted to specific purposes and with a simplicity which prevents disorders and wrong interpretation of directions. That the X-Ray incubator belongs in this class cess which it has attained in the few years in which it has been before the public. A recent turn in affairs of the manufacturers demanded greater factory facilities, which resulted in the building of a new plant at Des Moines, Iowa. It is said that this factory is most complete in its plans of operation, in its machinery employed and in the perfection of manufacture, which is possible because of its remarkable equipment. One of the appealing feais abundantly shown in the great suctures of the X-Ray is that one gallon of oil will complete an entire hatch. This will be appreciated by those who have undergone the fussiness of filling and cleaning a greasy lamp every day. The advantages of the X-Ray are so many that we must ask our readers to secure information concerning it from the X-Ray catalog, for which address the X-Ray Incubator Co., Des Moines, Iowa, mentioning this paper. See illustration on page 33.

MAGNIFICENT Fuehr & Stemmer Pianos may now be secured in every farm home under the remarkable plan enumerated in the advertisement on page 9. This piano has been a popular favorite among musicians for twenty years. Musical conservatories and col-

leges have shown their appreciation by using great numbers of them in their instruction departments. After reading the advertisement, it would be well to secure complete information for which address Fuehr & Stemmer Piano Company, East 24th St., Chicago, Ill.

FOR the reason that he has no use for him this season, I. F. Reilly, St. Paul, Neb., will sell his famous herd boar, Combination, or he will lease him to some reliable man for the season. This boar is one of the best in the West today. He is a proven sire of the very highest order and his get have already made reputation for themselves. We doubt if a better proposition has been offered the Poland China breeders in a long time. Mr. Reilly could use him again a year hence, but as practically everything on the farm at present is sired by him he will have no use for him this season. This boar has sired prize winners, and a great number of extra good breeding boars. We recommend this boar to those looking for a sire that is positively first class in every way, and he is immune. Buy him or lease him. It will be a good move.

WITH this issue of this paper, W. A. Irvin, Miller, Neb., one of the best known poultry breeders of the state starts an advertisement in which he offers Barred Rocks and also some Buff and Blue Orpington ducks. Mr. Irvin's reputation as a breeder of Barred Rocks is not surpassed by anyone in the West, if in fact by anyone in this country. He has bred some of the greatest show birds of the breed, and today has one of the heaviest laying strains possible to find anywhere. In the egg-laying contest at Topeka his fowls have been making a wonderful record. We believe that it would be positive economy to purchase a cockerel from this flock, or better still to purchase a few pullets and a cockerel, for in that way one would get a start of the very best to be had, and as they have been bred for generation after generation for utility as well as beauty, they are the sort that make good from a dollars and cents standpoint. The writer does not hesitate to recommend this stock, and as the prices are as low as one can ever hope to secure this sort of stock for, there is no argument in favor of waiting. The ducks are good ones of their respective strains and are very heavy layers and fine table fowls. It seems strange that good farmers and others would deny themselves a treat like a good fat Orpington duck when a foundation of this stock can be had at such a little cost. See advertisement on page 15.

W. J. ALLEN, representing the department of agriculture of New South Wales, Australia, recently purchased of J. C. Huckstep, Eolia, Pike county, Mo., for the New South Wales government, a pair of mammoth-bred jacks and three jennets. Over 10 head were inspected by Mr. Allen and Mr. Huckstep is to be congratulated on breeding and handling the kind that are selected for such discriminating trade. A jack and two jennets were sold during the early fall to go to South Africa, a jack and fifteen jennets were also sold to a Georgia man. During the year of 1913, Mr. Huckstep has sold more mammoth bred jacks and jennets than in any like period since he has been breeding. His barns now hold more heavy-boned black jacks with white points than have ever been quartered there at one time. He has built a large business by dealing squarely with every man and by handling jacks and jennets he can stand squarely behind with his personal guarantee which is as good as is possible to find any place. Our readers who are in the market for jacks and jennets would do well to go and see the stock Mr. Huckstep has on his fine farm. Note page 35 and when writing him kindly remember to mention this paper.

HUNTERS -- TRAPPERS

If you want an ideal lamp for night fishing, trapping, hunting or for work about farm or machinery, send to-day for a

Baldwin Lamp

Projects a 14 candle power light 150 feet. Burns Acetylene Gas. Weight 6 oz. Height 3½ in. Can be carried in hand or worn on cap or belt, leaving both hands free. No oil, soot or glass. At all dealers or by mail prepaid - $1.00 JOHN SIMMONS CO. 133 Leonard St. New York City

THE Nebraska Poland China hog, The Big Orphan, gained distinction not only as a great breeder, but as a popular show hog and his get have been much sought after. One of his best sons is offered for sale by A. Kool, Cordova, Iowa. This is a big, smooth fellow and a herd boar of more than ordinary merit. He will be sold very low because his owner cannot use him sale were snapped up at higher than longer to advantage and must make a change. Address inquiries to A. Kool, Cordova, Iowa.

HONEST mills sold in an honest way is the motto of the manufacturer of the Ditto feed grinder advertised on page 13. The mill is sold on the honor of the buyer. It may be obtained with the payment of no money down and returned at the expense of the manufacturer if it is not satisfactory. Nothing more could be asked. Write for the free catalog which tells all about this offer. Address G. M. Ditto, Box 12, Joliet, Ill.

ON December 18th, L. C. Shepard, Irwin, Iowa, will make a sale of Scotch and Scotch-topped Short-horns, and he will have some good cows and heifers and some good bulls in this sale. His sale will follow the J. T. Judge sale at Carroll, the day before, and parties can attend both sales very easily. There will be twenty-one head, with nine calves at foot, among which will be seven head of young bulls. Among the good Scotch cows is Lady

J. T. JUDGE'S "ALL-SCOTCH" SHORT-HORN SALE

THE GREATEST OFFERING OF SCOTCH BULLS AND THE BEST LOT OF SCOTCH COWS AND HEIFERS THAT WILL BE SOLD IN ANY SALE THIS YEAR

CARROLL, IOWA, WEDNESDAY, DECEMBER 17, 1913

48 HEAD

36 Cows and Heifers

12 SCOTCH BULLS OF HERD HEADING KIND

48 HEAD

A GROUP OF EXCEPTIONALLY GOOD SULTAN STANDARD BULLS TO BE SOLD IN THIS SALE

YOU will find in my sale as good an offering of **strictly Scotch cattle** as has ever been sold in the State of Iowa. Included will be Cruickshank **Victoria, Orange Blossom, Lavender, Butterfly, Gold Hunt Maid, Minerva, Nellie of Carlogie, Veronica, Secret, Violet,** and other famous tribes and individually they are high class in every particular. I am selling a grand, good lot of **Scotch bulls,** among which will be the massive yearling, **Diamond Sultan,** a son of the noted Scotch Sultan and out of the great cow, Golden Nell. **Sultan's March,** is one of the greatest white bulls that will be sold this year, and **King Major** is one of the best yearling bulls, both being sired by my great herd bull, **Sultan Standard. Sultan's Count** is another splendid, great, young white bull, and a couple Cruickshank Victorias are hard to beat. I am cataloging my best Scotch cows and heifers in this sale and they are very choice. There will be **eight head of Sultan Standard heifers in my sale** that are indeed hard to beat. All cows are bred and safe in calf or will have calves at foot. There will be **twelve head of calves that will be sold with dams.** The Sultan Standard heifers will all be bred to Diamond Sultan. **Of all that is good my offering affords the very best,** and if you want that kind be sure to attend my sale. **Catalog now ready and will be mailed upon application.** Address

COLS. WOODS AND McGUIRE, AUCTIONEERS.
WHEN WRITING FOR THE CATALOG KINDLY MENTION THE HOMESTEAD

J. T. JUDGE, CARROLL, IOWA

Douglas 3d, a granddaughter of Imp. Lady Douglas, the dam of the great bull, Cumberland's Last. He is listing two good Cruickshank Secret cows and a number of the Scotch-topped kind. Nine calves sell at foot with dams. There will be seven nice young bulls, among which is a September 12th calf got by Baron Favorite and out of Lady Douglas 3d. The sire of this bull is a son of Imp. Fashion Favorite and out of Imp. Meadow Beauty 5th. This bull is good enough to head a herd and somebody is going to buy a bargain in him. Another good bull is a grandson of Lady Douglas 3d. There will also be four nice Scotch-topped bulls in this sale. Most of the cows with calves at foot are rebred. It will be a good place to buy bargains in Short-horns. Write Mr. Shepard at once for catalog and mention Homestead. See page 33.

ON page 33 will be found the advertisement of P. J. Eggers, Denison, Ia., one of Iowa's best known and most reliable horsemen. He comes back again with another splendid lot of imported and home-bred Percheron, Belgian and Shire stallions and mares, and these he is now offering the public at the most reasonable prices. His horses range in age from two to seven years and they are sold with a guarantee of 60 per cent foal getters. Pete has a lot of good horses now in his barns and he will be pleased to have intending purchasers stop and see them. His barns are right near the Chicago and Northwestern depot, and parties can easily stop off between trains and see him. When writing him kindly mention The Homestead.

NO HERD of Poland China hogs of Iowa has attained greater distinction for the production of extraordinary size than has that of M. G. Arnold & Son, which is advertised on page 39. At the present time pigs by Orange Boy are offered for sale. This hog is a son of the noted Big Orange and possesses the excellent points of that hog to a remarkable degree. Special prices, made in order to clear up the season's crop, may be obtained on orders sent in at once. Address M. G. Arnold & Son, Strawberry Point, Iowa.

AT THREE of the leading state fairs this fall the Iowana Berkshires demonstrated their worth by winning many championships and many herd prizes. This is not to be wondered at when one considers the high-class breeding boars at the head of this herd the strong sows with which they are mated, and the intelligent manner in which Manager Thatcher conducts the handling of the animals. They are raised under the most progressive and sanitary conditions, every animal has been given the simultaneous treatment to immunize them against cholera, and when one buys at Iowana he knows that he is getting the best that the breed affords. That is the only kind handled at Iowana Farms. If you are in the market for a boar, some gilts or want the highest type of brood sows you can find them at this progressive breeding establishment. Look up the advertisement on page 38 and write the manager, J. L. Thatcher, Davenport, Iowa, for particulars, mentioning The Homestead.

SANDWICH Corn Shellers have been a standard of sheller values for a great many years. The improved sheller, illustrated in the advertisement on page 8 is one of the most up-to-date machines made. Farmers usually have a considerable spare time during winter. To such it is of interest to know that, having one of these Sandwich shellers, a winter's profitable work may be obtained without any of the expenditure. There is always shelling to do. A free sheller book, giving a lot of interesting facts, may be secured by writing to Sandwich Mfg. Co., 170 C St., Sandwich, Ill.

C. A. RITCHIE, Gresham, Neb., owns one of the best Short-horn bull calves that we know anything about. He is sired by a son of Cumberland's Last and is from a grand producing cow of the Cruickshank Gwendoline family. He is a full brother to the best heifer that we saw in Nebraska last season. This calf will interest someone looking for a high-class herd bull or for a junior year show bull, although handicapped some on age. This is an outstanding proposition. Write Mr. Ritchie and mention The Homestead.

IF any of our readers want to buy a nice bunch of Scotch and Scotch-topped Short-horns at private treaty they should read the advertisement of W. E. Cutler, Corydon, Iowa, at once, which appears on page 35. He is making the most reasonable prices on these cattle because he is compelled to leave the farm on account of sickness. Wire or phone him if you want these cattle as they are decidedly great bargains.

IF you have not purchased your Duroc Jersey boar as yet and you want a good one at a reasonable price, read the advertisement of W. J. Wendt, Remsen, Iowa, on page 32 and write him your order at once. His are all cholera proof and immune, and they are good. Write him about these boars at once.

A STRONG demand for sows and gilts should encourage prospective buyers of bred sows to make their purchases early in the season. B. F. Marmion, Farmington, Iowa, informs us that he has a few good big-type Poland China boars for sale and is also breeding a bunch of large, growthy spring gilts to his good, young herd boar, Wonder Jumbo, sired by Nebraska Wonder, a son of Fesenmeyer's noted A Wonder, and out of a sow by Jumbo Junior. This boar is fourteen months of age, has a ten-inch bone and weighs 525 pounds. These gilts will soon be ready to ship out and Mr. Marmion will be glad to take your order at once. He also has some May and June gilts that he is offering for sale open at a very reasonable price. See page 39 and write him, kindly mentioning The Homestead.

EVERY farmer that is a reader of The Homestead has need for a good fur coat. No class of men are so exposed to all the variations of the weather as is the farmer and stockman. A good fur coat is the warmest and at the same time lightest garment that has ever been devised for protection against the rigorous blasts of old King Winter. Save a good cow or horse hide if you have one and get the Lincoln Tannery, Lincoln, Neb., to make you a coat. If you have no hides, buy from them direct. They also buy all kinds of hides and furs. These gentlemen are first-class tanners, will make you a coat or robe that is practically moth proof and well made, so that it will last for years and years. Kindly notice their advertisement on page 15 and write them for prices.

THERE is always a fascination in hunting and trapping. At the present time there is also a quite considerable profit in trapping. The profits are made more sure if traps of the right sort are used. None has a better reputation than the Victor traps, advertised on page 12. None is made by a more reliable concern than the Oneida Community, No. 8, Kenwood Ave., Oneida, N. Y. And a book of expert experience and advice on trapping may be secured by writing to the address named.

ON page 17 R. B. Dairy, Station, B., Omaha, Neb., makes an interesting announcement whereby he is shipping calves of both sexes, secured from the large dairies around Omaha at $7.50 each. These are of all breeds and are from heavy milking dams, and are from a week to ten days old. Send your orders for as many as you want at once, and when ordering kindly mention The Homestead.

BUYERS of Duroc Jersey hogs who appreciate the blood of old Golden Model, should investigate the pigs offered for sale by A. R. Olson, Woodward, Iowa, whose advertisement will be found on page 37.

THE silver cup winning Hampshires are in strong demand from the herd of F. T. Quire, Sully, Iowa. He informs us that he has had an excellent trade in boars and only has five left and they are sired by Eddie Moch, a son of the undefeated grand champion, Messenger Boy. These pigs are weighing 160 pounds each and are being priced at $25 each. At this price they will soon be sold and we would advise any of our readers in need of a Hampshire boar to send Mr. Quire their order at once. This gentleman will hold a sale of bred sows February 17th and will have a good lot to offer the public on that date. Mention The Homestead in writing.

HOWARD R. MOORE, Dexter, Iowa, advertises Duroc Jersey hogs on page 38. The animals he offers are big, lengthy, heavy-boned fellows with quality. They stand well on their feet. The fall boars are by a son of the noted show hog, Educator, and their dam was the daughter of Crimson Wonder Again. The second dam being the noted brood sow, H. A.'s Queen. Write to the above address for prices or additional information.

FARMERS who can use May and June Poland China boars are referred to the advertisement of H. E. Burgus, which appears on page 39. These pigs are offered at unusually low prices and in addition they are recorded and express charges prepaid to any point in Iowa. There are some by the noted A Wonder and from brood sows of equally popular blood lines. Send orders to H. E. Burgus, R. 2, Osceola, Ia.

D. S. COCHRAN, Lincoln, Neb., is offering some extra choice September pigs sired by the great Royal Wonder, and these pigs are being priced at $10 and $12.50 each. They are great bargains and those interested should send early, as this class of stock will not last long. Royal Wonder pigs are good, and they breed on. Order without delay. Pigs of either sex for sale.

SUMMIT KNIT-NEK VESTS are advertised on page 25. They are made with particular reference to close fit and comfort. They are also light weight and durable. Style book, giving complete descriptions, may be obtained by writing to Guiterman Bros., 347 Sibley St., St. Paul, Minn.

THOSE of our readers who want a good Duroc Jersey boar, should write or go and see A. F. Hager, Avoca, Iowa. He has a nice bunch of boars sired by A. F.'s Pilot Wonder that he is closing out at farmers' prices. Write him about these boars at once.

SPECIAL sleeping car accommodations have been arranged between the Percheron sale of W. S. Corsa, White Hall, Ill., Tuesday, December 9th, and the sale of A. L. Robison & Sons, Pekin, Ill., the day following, leaving White Hall at ten o'clock the evening of De-

ROBISON'S OFFERING OF HIGH-CLASS PERCHERONS

AT LESLIE FARM, NEAR PEKIN, ILL.,

WEDNESDAY, DECEMBER 10, '13

40 HEAD---34 Mares and Fillies---20 Imported---6 Stud Colts

INCLUDED in this offering are mares with prize-winning records in France and America, among them some of the best that have ever been imported. American bred mares that have the richest breeding and the strongest individuality. Sensational filly foals by Moulinet, the champion horse of France, and stud colts by Moulinet and Rabelais, a half brother to Calypso and Casino. Mares are bred to Moulinet, Rebelais, Jayet, son of the $5,000 Avocat, with the exception of a few of the imported mares, that were served in France to outstanding sires. This is an offering of Percherons of superior merit in every particular, without doubt the greatest lot of the breed that has gone through a sale ring in a long time, and we cordially invite the attendance and patronage of the buying public, as we know that we have the horses to suit the most critical. The sale will be held at Leslie Farm, which is at Leslie Station on the Big Four railroad, fifteen miles from Peoria. All trains stop at the farm. Catalogs upon application. Cols. Jones, Reppert and Seeley, Aucts. Mention The Homestead and address

A. L. ROBISON & SONS, PEKIN, ILLINOIS

JEAN, a Sensational Filly by Moulinet

cember 9th and arriving at Pekin the next morning in time to take the Big Four train to Leslie Farm.

HOMESTEAD readers are quite familiar with the Poland China advertisement of William F. Drummy as it appears on page 39. That gentleman now has twenty-five big, long, lusty growthy, heavy-boned boars, and a number of choice females for sale. These are of popular strains of blood. Some of the females will have been bred for March or April litters. These pigs are sired by Wonder D., (he by the great Fesenmeyer hog, A Wonder), Big Bone, Long Hadley, Sampson and others of note. Their dams are sired by Long Wonder 2d, Hutch, Sentinel, Chief Jumbo and others. The herd is in strictly good health and the pigs offered for sale will be placed at most reasonable figures. Address inquiries to William Drummy, Ryan, Iowa.

THE illustration on page 13 is made from a photograph of the Shire mare, Ankeny Flora. This animal is cataloged to be sold at the public sale of J. A. Sage on December 9th as per advertisement of last week. She is a magnificent specimen of the breed, with plenty of scale, big boned, attractive symmetry and excellent muscular development. She has style and spirit with all her other qualities. She is six years old, just entering upon her age of usefulness and should be a splendid purchase for someone who wants to get into the pure-bred horse business. For catalog of the sale, write to J. A. Sage, Ankeny, Iowa.

DUROC Jersey boars of spring farrow are offered for sale by J. E. Smith, Victor, Iowa. He has one of the prominent herds in the state and has been using boars of the very best quality for several years. His spring pigs are sired by Smith's Crimson Wonder by Crimson Wonder 3d, Victor Colonel by Premier Colonel, Crimson I Am by Crimson Wonder I Am, and Golden Prince. They are out of sows sired by Model Wonder, Kelly's Pilot Wonder, The Professor, Proud Colonel and other boars of equal merit. See the advertisement on page 37 and write mentioning The Homestead.

THE American Chester White herd is advertised on page 36. This herd is headed by Chief Select, an animal whose record as a sire of good ones is rapidly becoming appreciated by those who are looking for the very best Chester Whites. There are also boars and sows of fall and spring farrow by Hiawatha and Path Finder. Address Alden Anderson, Ellsworth, Iowa.

APPLETON wood saws are models of strength, simplicity, durability and effectiveness. They are made in several sizes and adapted to all the purposes of a wood sawing machine. They are sold at very reasonable prices. Descriptive booklet may be obtained by writing to Appleton Mfg. Co., 639 Fargo St., Batavia, Ill. See advertisement on page 20.

IMMUNE Poland China boars, sired by B. B.'s Orphan, a son of the 1,065-pound boar, The Big Orphan, are advertised for sale by Ben Broughton, Lake View, Iowa, on page 39. He is pricing these boars at $50 and $35 in order to close them out.

IF you have not ordered that Duroc Jesey boar yet, get busy and send for one from C. R. & R. W. Steele, Ireton, Iowa. They are all cholera proof and immune and a $30 check will get you a good one. Mention The Homestead when writing them.

HIGH-GRADE Guernseys and Holsteins are advertised on page 17 by H. L. Dunning, Hebron, Ill., who makes a specialty of car lots. Mr. Dunning has over 400 head from which to make selections.

A. W. STEWART, Harlan, Ia., is closing out all his Poland China boars at from $20 to $40. Read his advertisement on page 39 and write him at once about these boars.

HAVING about thirty head of extra good Duroc Jersey boars for sale, William F. Drummy makes an announcement on page 37 which will be of interest to those who are in search of big-boned, long, deep-bodied hogs, which are of the choicest lines of breeding. He also has gilts bred for March and April farrow that are sired by such noted hogs as Drummy's Col., (he a son of Freed's Col.) Illinois Chief, Supreme Goods, Cherry Prince and Superba Jr. Their dams are daughters of Red Wonder 2d, Cash Boy, Notcher F., Drummy's Col., Iowa Notcher and others of equal merit. Mr. Drummy makes a point of making quick sales at small profit for the next thirty days. He quotes specially low prices, invites inspection or correspondence. There is no cholera in his neighborhood. Address William F. Drummy, Ryan, Iowa.

ON page 38 an announcement is made that R. J. Bronner will ship on approval some big, lengthy, high-quality Poland China big-type boars that have been given treatment for immunity from cholera. These pigs are by Giant Wonder, a hog bred by Peter Ellerbroek, and their dams were by a hog that won third place at the International Exposition last year. Any responsible reader of this paper may have one of these boars shipped on approval and at a reasonable price. The gentleman also has for sale three large red Short-horn bulls of excellent lines of breeding, which he will sell at specially low prices if taken soon. Address him at once. R. J. Bronner, R. 5, Box 36, Cresco, Iowa.

WITH over eighty large-boned, black mammoth jacks on hand to select from, Al E. Smith, Lawrence, Kan., is better prepared than ever to supply prospective jack buyers with what they want. Standing fifteen to sixteen hands standard measure guaranteed and priced to sell, these jacks will be found to be the kind discriminating buyers are looking for. Mr. Smith's farm is located adjoining Lawrence, just forty miles west of Kansas City on the Santa Fe and Union Pacific railroads, easy of access as the train service is unsurpassed. Mr. Smith will meet you at Lawrence any time that you notify him to do so. See page 35 and in writing for further information kindly mention this paper.

WAYSIDE STOCK FARM at Pulaski, Iowa, produces excellent Poland China hogs and Polled Durham cattle. At the present time the farm is offering for sale fall and spring boars, some of which are good enough to head good herds. A little later forty head of bred gilts and sows will be offered. The proprietor informs us that he believes these to be the best bunch of big-type hogs that he has ever raised. He now has in service Jumbo, Big Prospect, Equal's Wonder (grandson of A Wonder) and E. J.'s Wonder (a son of A Wonder and out of a Big Joe dam.) Prices or descriptions may be learned by writing to E. J. Augspurger, Pulaski, Iowa.

SOME unusually high-class young Scotch bulls are advertised for sale by J. G. Westrope, Harlan, Iowa, on page 35. Get busy and go and see these bulls at once if you are wanting a herd bull.

O. J. SATRE, Jewell, Iowa, still has for sale a few good boars by the son of Big Jones. Write him for special prices.

MONDAY of next week, December 8th, is the date for the sale of Hereford cattle and Clydesdale horses by W. E. Hemenway & Son, Steward, Ill., particulars regarding which have already been given in these columns. The buyer will find some excellent things in this offering. Thirty-four head of Herefords are listed including daughters of Masquerader, Ben Bolt and Prince Star Grove. The latter bull will sell as will also nine of his sons. Ten Clydesdales, thee registered and the balance high grade will be sold. Steward is seventy-seven miles from Chicago on the St. Paul division of the Burlington railroad and six miles from Rochelle, on the main line of the Northwestern.

PIKE TIMBER STOCK FARM at Belmond, Iowa, announces a public sale to include sixty head of high-class Poland China boars on December 16th. A large proportion of these boars are the get of Big Wonder, 180955, a hog that, aside from carrying the most popular big-type blood lines, is a breeder and producer of size, quality and finish. The dams of the pigs are largely by Jumbo 170495. This hog also represents popular lineage and has gotten a class of brood sows that impress themselves upon breeders, who insist upon bigness, goodness and early maturity. Additional information will be given in a later issue of this paper. For catalogs address Davenport & Mack, Belmond, Ia. See advertisement on page 29.

ON March 25th, A. C. Shallenberger, Alma, Neb., will hold his annual sale of pedigree Short-horns. This sale will be one of the more important sales of the season, hence this early announcement. Mr. Shallenberger has in times past sold some of the extra good stock of the state, but this sale will consist of fifty head and far better than many offerings fro mthis herd and fully the equal of the best ever sent forth from this well-known breeding establish-

TOO LATE TO CLASSIFY.

DUROC JERSEY BOARS AT THIRTY-FIVE DOLLARS EACH

I HAVE 20 big, smooth, good boned boars of March and April farrow that weigh 200 to 235 pounds each. They are sired by **Success** (by S. E.'s Premier Col., dam by Chief's Col.), S. E.'s Premier Col. and Captain Model by Golden Model. The dams are of best breeding. I know these boars will please you and if you will send me a check at once for $35 I will send you a boar and if you are not satisfied upon his arrival send him back and I will return your money. There is no hog sickness in my community. Send me your order, mentioning The Homestead.

C. A. MOULTON - - - - MORRISON, ILLINOIS

ment. This herd is the home of the great young bull, His Highness, one of the great individual and breeding bulls of the country. Keep the herd in mind, and watch The Homestead for full announcements of the sale. G

WITH present prices of eggs flirting around the 50-cent mark, any means of obtaining winter eggs looks like a profitable one. The big advertisement of the Dr. Hess Poultry Pan-a-ce-a which appears on page 14 of this issue suggests a solution of the egg problem. Dr. Gilbert Hess (shown at work in his laboratory in the accompanying engraving) has spent almost a lifetime in the experimental work leading to the perfection of preparation advertised. It is now offered as a guar-

anteed means of producing poultry thrift and vitality and adding to egg-producing capacity. Note the prices named in the advertisement. Forward orders or requests for information to Dr. Hess & Clark, Ashland, Ohio.

THREE BIG PAPERS $1.25.

The Iowa Homestead, Twice-a-Week Republic of St. Louis, the biggest and best semi-weekly in the Southwest, and Farm Progress, a big semi-monthly farm paper, sent a full year for $1.25. Send orders to St. Louis Republic, St. Louis.—Adv.

McDermott's Short-horn Sale.

The sale of Short-horn cattle held by J. W. McDermott, Kahoka, Mo., on November 25th, drew one of the largest crowds of breeders seen at a Missouri sale in some time past. The cattle were an exceptionally well-bred lot and with the exception of a few head were in nice condition. The top of the sale was $600 at which price J. E. Grey, of Iowa, took the ten-months-old roan bull, Count Avondale, a son of Good Count and Matrimony 2d by Avondale. His dam went to Uppermill Farms in Iowa at $505, the top on females. Parker Bros., of Nebraska, secured Whitehall Prince at $510 and he was considered a bargain. Maid of Whitehall, a show heifer went to Chas. Nelson, of Illinois, at the moderate price of $405. Seven heifers not listed were sold, but not figured in the averages. These brought an average considerably above $100. Cols. Jones and Reppert did the selling. Following is a list of sales over $100:

FEMALES.

Matrimony 2d, calved April 3, 1909; Uppermill Farm, Wapello, Iowa	$505

8 bulls	$2,345; average	$293.12
33 females	6,620; average	200.60
41 head	8,965; average	218.66

FERTILIZE GARDEN IN FALL.

To the Editor of The Homestead:

The garden plot can be made the most valuable ground about the place. It will grow over a hundred dollars' worth of vegetables every year if properly fertilized and cultivated. All gardens demand intensive cultivation, and it does not pay to plant good seed in soil that is not fertile. Better garden crops will be grown, and the farmer will get more satisfaction in seeing them grown if the soil has been properly fertilized.

The best time to fertilize the garden is in the fall of the year. At this season there is generally a large supply of fertilizer on hand. This can be spread liberally on the garden, for even if it is fresh it will have the entire winter to decompose and assimilate with the soil. After it is spread evenly over the ground it should be plowed under. Set the plow deep and cover it well. By spring the manure will have rotted and added humus to the soil.

One advantage in manuring in the fall the ground will be plowed and ready for early planting. All that will be necessary is a double disking, harrowing and leveling. This means not only the securing of an early crop but a better one. When the seed are planted early the roots will strike down deep into the moist soil and the dry season that comes later will not greatly affect the plants.

Then fall plowing of garden will destroy many weed seed. They will sprout and be killed by the cold weather. This means easier cultivation of garden. Subscriber.

FACTORY OF THE X-RAY INCUBATOR CO.
See field note on page 30.

GEORGE EGGERT NEWTON, IOWA

IRVINEDALE FARM BELGIAN HORSES

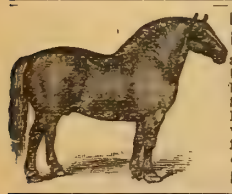
IMPORTED and home-bred stallions and mares. Good ones for those who want high-class stuff and cheaper ones for farm buyers at farm prices. Stock for sale at all times. Public sale February 19th. Ankeny is ten miles north of Des Moines on the C. & N. W. and Ft. D., D. M. & S. Interurban. Address

CHAS. IRVINE - - - - - ANKENY, IOWA

AMERICA'S FAMED HORSE DISTRICTS.

THIS particular district, famed for Percherons. The Chandler herd noted for draftiness, substance and bone, is a strong factor in turning the tide to American-bred Percherons. Possibly not French fat, but bigger frames more power better feet and legs. American users love this useful type and get them from my big bunch reg. studs weanlings to 4 yrs. Write to-day.

FRED CHANDLER, R. 7, CHARITON, IOWA.



HART BROS.'S NEW IMPORTATION PERCHERONS AND BELGIANS arrived Oct. 8, 1913. The best lot of 2-year-olds brought over his year. Some will weigh 1900 lbs. Great big fellows with size, bone and quality. Come see them at once. Address

HART BROS, - OSCEOLA IOWA

TWO DAYS' SALE SCOTCH AND SCOTCH-TOPPED SHORT-HORNS

WALL LAKE, IOWA, TUESDAY, DEC. 9, '13

40 HEAD---ONE-HALF OF WHICH ARE SCOTCH---40 HEAD

I AM selling **17 bulls** and **23 cows** and **heifers**, many of which are sired by my great bulls, **Pride's Best** and **Standard Goods**. Of the Scotch families listed will be **Butterfly, Dorothy, Eliza, Ury, Brewster Beauty, Rose of Aberdeen, Orange Blossom, Marchioness** and other well-known tribes. There will be thirteen choice cows in the sale, eight of which will have calves at foot. I am selling a grand, good lot of young bulls in this sale, many of which are good enough to head the best of herds. Col. Fred Reppert, Auctioneer. Write for my splendid catalog at once. Address

J. A. RICHARDSON, WALL LAKE, IOWA

WALL LAKE, IA., WEDNESDAY, DEC. 10, '13

40 HEAD---9 BULLS--31 COWS AND HEIFERS---40 HEAD

I AM selling as good an offering of Scotch and Scotch-topped Short-horns as you ever saw in this section of the state. There will be **13 calves at foot of dams,** mostly sired by the noted bull, **Scottish President.** Included will be Ceremonious Pigeon, a daughter of the noted prize-winning bull, Ceremonious Archer; also Snowball, a daughter of the great Best of Goods, as well as a lot of others equally well bred. Nine extra choice bulls are listed, all but one of which are sired by Victoria Sultan, a son of the $1,000 bull, Sultan 3d. It will be hard to find a better lot of bulls than I am listing for this sale. Col. Fred Reppert, Auct. Write for catalog at once.

C. A. OLDSEN, WALL LAKE, IOWA

WHEN WRITING FOR CATALOGS TO ABOVE BREEDERS KINDLY MENTION THE HOMESTEAD

SHORT-HORN CATTLE.

MILLER'S 1913 SHORT-HORN IMPORTATION ARRIVED

I JUST recently arrived home from Canada with a **choice importation of young Scotch bulls and twenty head of as good heifers as was ever brought to this country.** Among these bulls is a royally-bred **Missie,** a **Nonpareil,** a **Clementina,** a **Wedding Gift** and a **Countess** that are good enough to head any herd in America. Among richly-bred heifers will be found **Mina, Village Girl, Buttercup, Rachel, Beauty, Louisa** and **Red Rose** tribes and these are as good as you ever looked at. **I am offering these at private treaty** and if you want something real choice it behooves you to come and see these at once. Address

R. O. MILLER, LUCAS, IOWA.

HORSES AND JACKS.

40 Shires and Percherons

A NEW importation, now at home in our barns, is not excelled by any lot that has or will cross the water this season. Size, quality and style that have won honors in the show rings of America and Europe

And We Make the Price to Suit You

We can do it because we bought them low; we pay no commissions; we have no expensive salesmen; we raise our own feed, and the running costs of our establishment are very low. We can sell a better horse for less money than any one on earth. Come and see; 17 miles from Des Moines; trains every hour on main line of Rock Island or Interurban.

R. WILKINSON & SONS, MITCHELLVILLE, IOWA

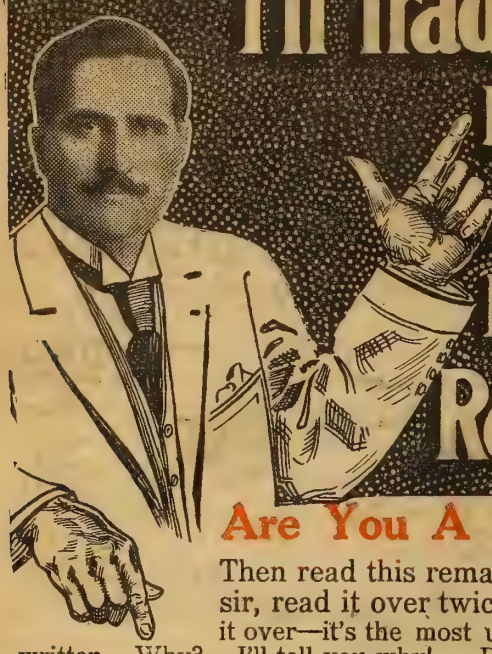
I'll Trade You a Galloway Manure Spreader Any Time for 400 Bushels of Corn! Read This Letter.



Here's One Man's Experience With a Galloway

I own a six hundred acre tract of land and had it rented. The renter neglected to haul the manure out as it occupied a great deal of time in the old fashioned way of spreading with a fork. So in 1908 I decided to purchase the GALLOWAY SPREADER and put a man to work for one month. He hauled on an average of twenty loads per day. He hauled five hundred loads or more, about two-thirds more than the original way. I had even the old stack bottoms spread over the fields. We started on forty acres and manured twenty, that was in the fall of 1908. We put the forty in corn the next spring and **the twenty that got the manure yielded twenty bushels more per acre than the other twenty beside it on ground not manured.**

Both the renter and myself were well pleased with the results and the next spring, 1909, we decided to utilize all manure we could as it required so little time to use the GALLOWAY SPREADER as it takes about three minutes to distribute one load, and it takes thirty minutes or more the old fashioned way, then we get it more even and the manure went twice as far. I noticed in going over another farm, that I oversee where there is no spreader provided, the manure was in chunks, other places were barely getting little or no good of the fertilizing. **The hay on the meadow yielding one-third more where we used the spreader.**

And in the fall of 1909 we manured ten acres for corn and when gathering this fall **we gathered from one-third to one-half more corn to the acre than heretofore, enough or more than enough to pay for a GALLOWAY SPREADER.** The land beside the ten acres was just as good, but did not yield but one-third as much. We tried it again on meadow land with good results.

FRANCIS E. CROUCH, Blockton, Iowa

Are You A Land Owner? Are You A Renter?

Then read this remarkable letter from an up-to-date, progressive farmer. Yes, sir, read it over twice---three times---a dozen times. Read it over and then think it over—it's the most unusual—the most remarkable—testimony on manure spreaders ever written. Why? I'll tell you why! Because, here is the case of a large landowner furnishing his renter not only with a manure spreader but with a man to run it at his own expense in order to get the manure out on his land and keep it in good condition. Did you ever hear of a similar case? I never did. I've heard of landowners buying spreaders for their tenants, but never before hiring a man to do the work.

Did it pay? I should say it did! Ask Mr. Crouch or his tenant. Will it pay you? I can show you thousands of letters from my customers that prove a Galloway Manure Spreader to be the best machinery investment they ever made. Yes, sir, it will pay you and pay you big. You can't afford to be without one.

Let me tell you something. There are millions of acres of land in this country today starving for want of manure—land that would pay a profit with the aid of manure and a manure spreader. There are a million and more farms in this country today without a manure spreader running at a loss that would pay a profit if the owner or renter would invest in one. That's what it is—an investment—a big dividend producer for any farm.

Now, I am dead in earnest about the proposition I made you at the top of this page. I am dead in earnest on this manure spreader proposition. I believe the manure spreader is the most needed tool on the farm. **No farm can afford to be without one. Yes, sir, I'll trade you any style or make of Galloway Spreader you want any time for 400 Bushels of Corn.**

Will you do it? Never! Of course you won't because I'd be getting the long end of the deal. **I know it! But,** that's just what the Galloway Spreader did for Mr. Crouch; produced 20 bushels more corn to the acre on 20 acres on the same identical ground—than he raised on twenty acres where he didn't use the spreader. Paid for itself the first season. Didn't it? And then paid good big interest the next season on his hay land. It will pay you just as well. Mr. Crouch could better afforded to have traded me 400 bushels of corn for his spreader than to have done without it for, it made him that much and more the first year, — while he has the use of the machine for years to come. So can you or any other man afford to take me up on my one-sided offer, but I don't ask it. No, sir, I don't ask one-fourth that much. My prices are so low and my direct from factory terms so liberal that any man can afford a Galloway Spreader.

Now here's the point. It doesn't make any difference whether you are a landowner or renter, you can't afford to be without a manure spreader—not for another day. If you're a landowner it will pay you a bigger profit out of your land and raise its value. If you are a renter it will help you pay the rent and make a bigger profit besides. The manure spreader means the same thing to either landowner or renter. **Bigger profits at the end of the year.**

That's not only my word for it—but, the word of thousands of business men farmers. A lot of them at first didn't believe their Galloway Spreaders would make them the profit I said they would—that today wouldn't sell their spreaders for many times what they cost if they couldn't get another one.

Borrow the money at the bank if you have to and buy one—or better still write me for my liberal time payment terms and let the spreader pay for itself. It will do it. Now, just note my new low prices on Galloway spreaders. Get my new catalog giving all the facts. Just fill in coupon below. Do it now.

WRITE ME TODAY FOR MY NEW CATALOG DO IT NOW!

My Direct From Factory Prices Save You $25 to $45

$39.50 CASH WITH ORDER PRICE

Buys My No. 0 Wagon Box Spreader--- The Lowest Price Ever Made On An Attachment Spreader

My No. 0A Complete 50 Bus. Spreader Only .... The Lowest Price Ever Made On A Complete Manure Spreader **$64.75** CASH WITH ORDER PRICE

My spreader prices are slashed clear to the bone. You have never before in history had an opportunity to purchase a strictly standard, high quality spreader at such a never-before-heard-of price. Yes, sir, right at the start I will save you from $25 to $45 on the manure spreader you buy of me. Isn't this money worth saving? It certainly is and I know every business man farmer is going to take advantage of these new low prices. Investigate! That's what I want you to do. The more you investigate my prices, my spreaders and my direct from factory, one-profit-plan of selling the better I like it. It means in the end just one thing sure—a new customer and a new friend of the Galloway Way. Remember, my new low, unequalled prices are made possible by my dealing right direct with you—cutting out all middlemen's profits, all salesmen's expenses and dealers' bad debts. When you buy of me direct from the big Galloway Chain of Factories you have only one small manufacturer's profit to pay in addition to the actual cost of materials and labor that enter into the construction of my machines. Then back of every spreader I sell goes a strictly 5 year guarantee on materials backed by a $25,000 legal bond. With the most liberal free trial offer ever made. My spreaders must please you absolutely after a thorough test on your own farm or you can return them and I will refund your money and pay all the freight. Can you beat this offer? Never! Try the Galloway first, before you think of buying any other style or make of spreader.

Nine Different Styles and Sizes to Select From

You will find just the size and style spreader you want for your farm in the complete Galloway line at a price that will tickle your pocketbook. My attachment or wagon-box spreaders are the only successful wagon-box spreaders made, for their patented adjustable features are necessary. No other make or cheap imitations have these features. Remember the Galloway is the first and original wagon-box spreader. More of them in use today than all other makes combined. They will fit any style of farm wagon gear or truck. Four styles and sizes to select from.

My Complete Spreaders are unequalled—Trucks are detachable and can be used for other purposes. Three styles and sizes to select from. My big Jumbo, 80-bushel capacity spreader is a giant among spreaders and sells for only $93.50 f. o. b. Waterloo. My low-down, semi-underslung spreader is the last word in manure spreader construction. Light draft, two horses will handle it easily, large capacity, equipped with the proven Galloway features of mechanical construction—in a class by itself. Get my new catalog showing all my different styles and sizes. Do it now.

Trucks Detachable. Saves You $35 to $50

Don't forget this great fact. When you buy a Galloway Complete Spreader—My Famous No. 5, 60 and 70 bushel capacity machine for instance, you get a regular standard, wide track farm truck that you can use for other purposes. It is equipped with patented adjustable bolster stakes so it will take a regular wagon box, hay or hog rack or you can use it for hauling logs, etc. My spreader trucks are the best and strongest farm truck on the market. Made almost entirely of steel with flexible front trucks—cut under type. You can't buy their equal at a dealer's for less than $45 to $50. You save that much by buying your complete spreader of me, for I save you the price of an extra farm truck. These spreader-trucks are guaranteed to carry 6,000 pounds. Both my spreaders and trucks are sold under the strong Galloway Guarantee of your money back if not satisfied. Try them 30 days on your own farm, entirely at my risk with the money in your own pocket. Get my new special **30-day Free Trial Offer.** The most liberal offer ever made. Write me today for my catalog and full details of my offer.

Get My Special Offer

Then as a final clincher I have a new, special, cooperative, profit-sharing offer to make you that simply can't be beat. It will help you get your spreader partly or entirely without cost to you in the end. No canvassing or soliciting. Just the simplest business proposition you ever heard of. Write me today for my new spreader catalog and I will give you full particulars of my offer and send you also **Free** my valuable book of information "A Streak of Gold" which is worth the price of a manure spreader to you any time if you follow its common-sense suggestions on the proper use and care of manure. It's brim full of valuable information on this important subject. Send for my catalogs. Do it before you lay this paper down. **Just fill in, tear off, and mail free** catalog coupon or write me a postal. Address

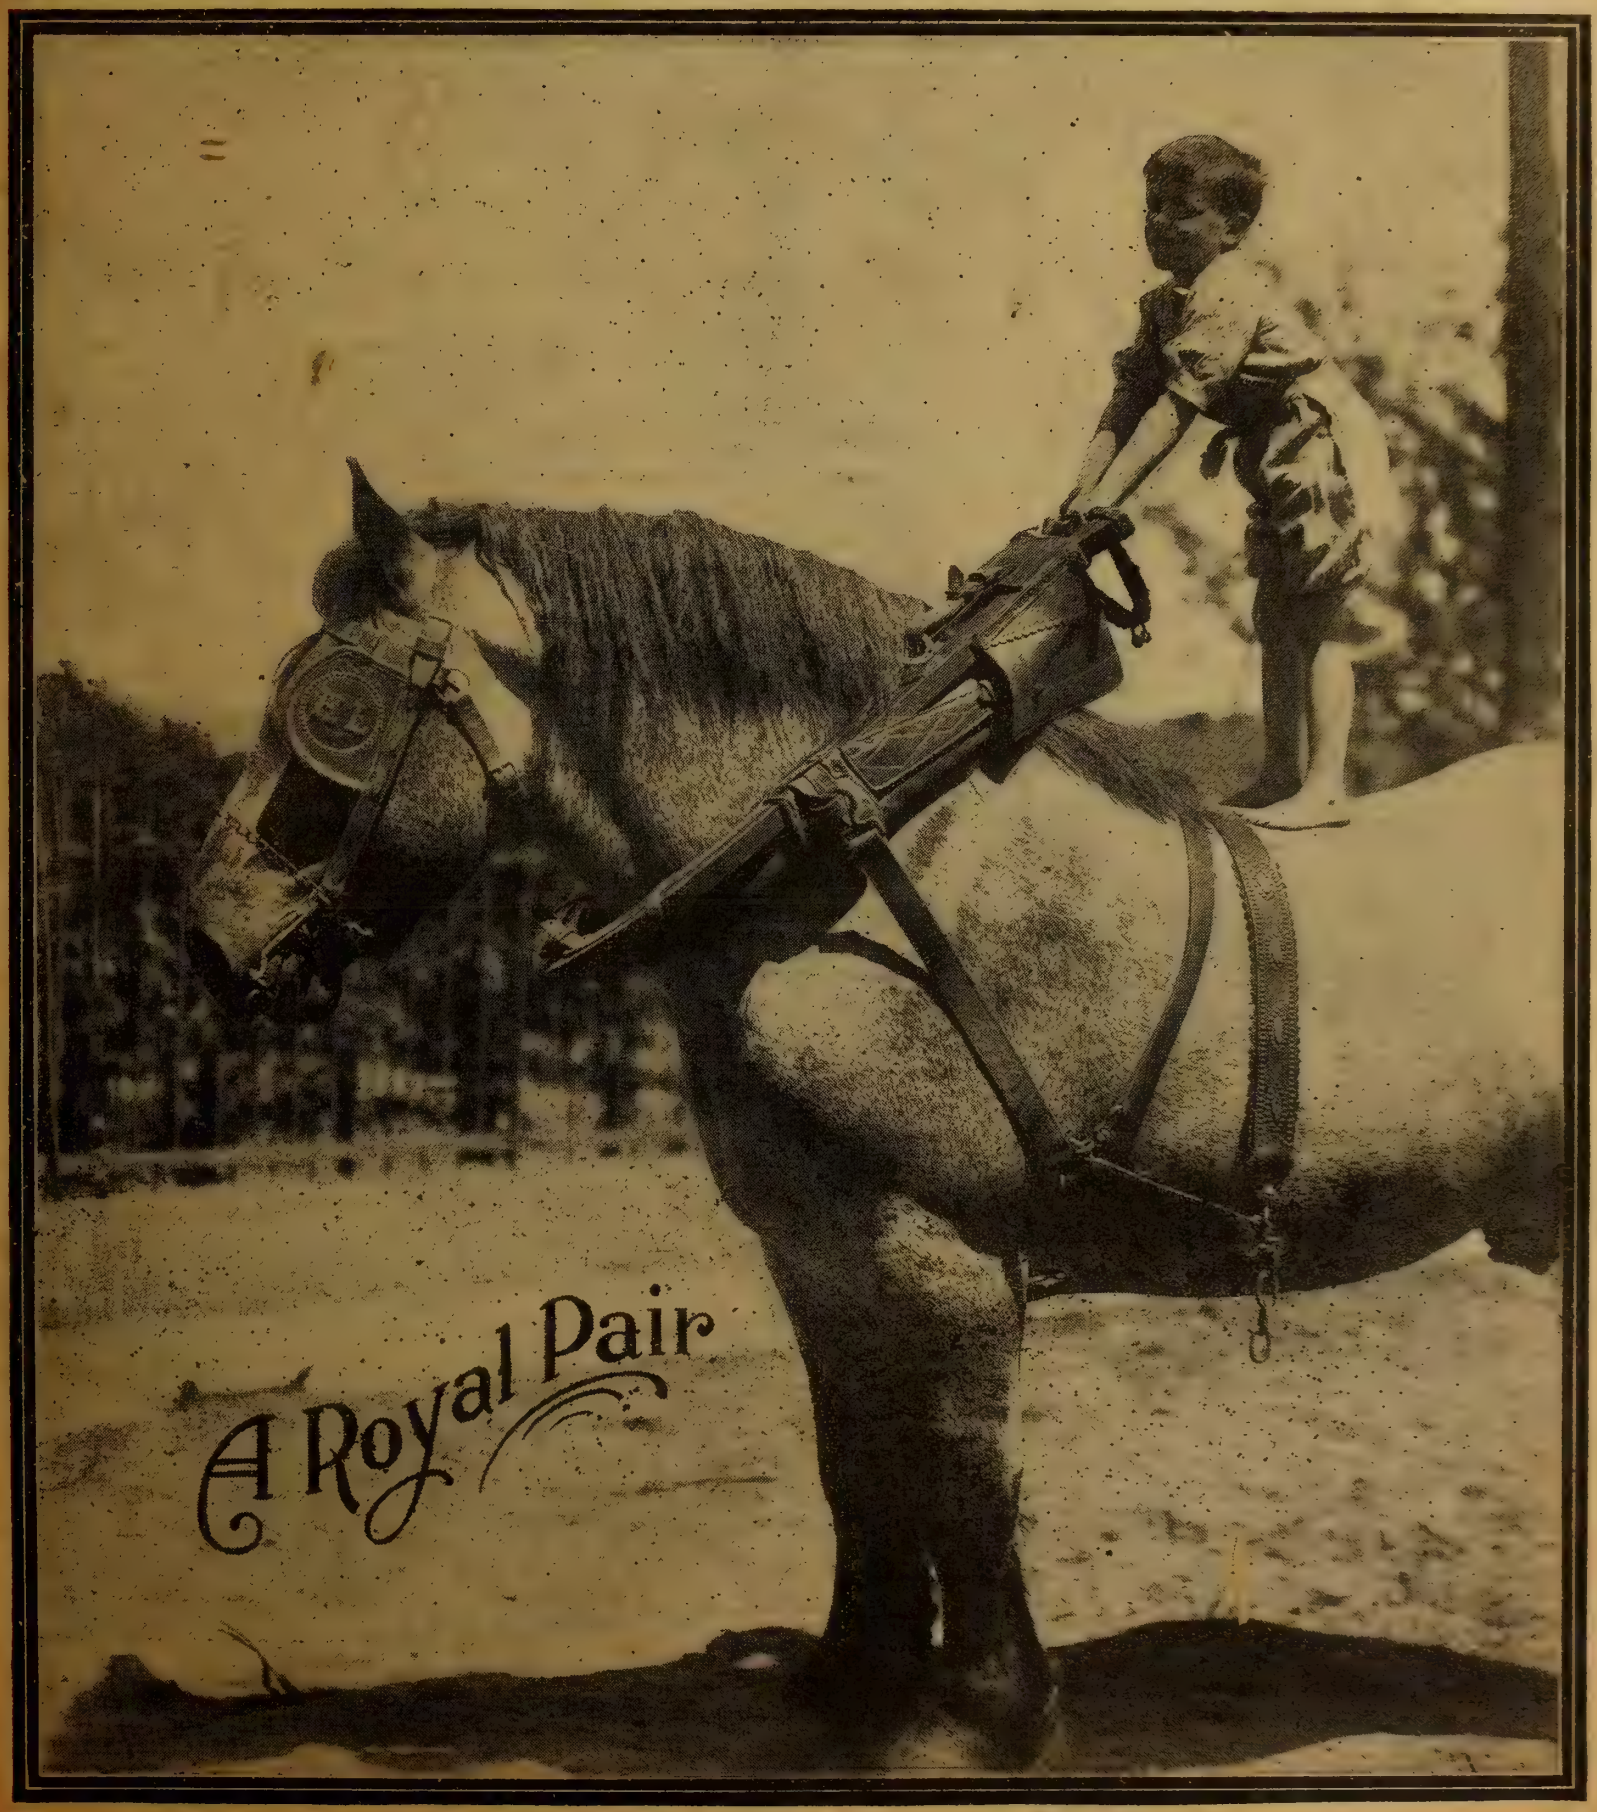
VOL. LVIII. NO. 51. DES MOINES, IOWA, DECEMBER 18, 1913. WHOLE NO. 2932



Here is the "Biggest" Automobile in the World

Maxwell 25/4 $750

Extravagant Assertion?---Let's Analyze It

Who Was the "biggest" general in the world? Napoleon, he conquered Europe—and he was five-feet-three!

Who Was the "biggest" statesman in the world? Bismarck, he built the German Empire—and he was six-feet-four!

So You See Mere Size Doesn't determine who nor what is biggest. It is achievement that confers that title "biggest."

We Maintain that the biggest automobile in the world is the one that does the biggest things—and does bigger things than a bigger car can do at the same cost.

And That Confers the Title on the Maxwell "25," which sells for $750, and which, though of ample capacity for carrying five full grown adults anywhere any car will go, yet weighs only 1,650 pounds.

This Car Cannot Be Called either small or large—in inches. It is neither a Napoleon nor a Bismarck in physical proportions—but is a combination of both in efficiency and—in competition.

It Is the Most Formidable rival other cars have ever encountered.

Its Conquests have embraced the territory formerly held by both the very cheap, and the overly-large, underly-efficient cars, selling for $1,000 and more.

It Conquers because it meets the needs and the ideas of the majority of informed buyers. It appeals at the same time to the logic of common sense and the sense of the beautiful.

Its Beauty is shown in looks and performance—handsome is as handsome does—and handsome as is.

The Buyer Who must take a peep into the purse before buying, here finds a car within his reach and made to his heart's desire.

Send for the Book—

Catalog of the "25"---Free for the Asking. Also (free) our booklet "How to Make Your Car Live Twice as Long." Read it---it's worth dollars to you. Address Department "A."

On the Other Hand, the buyer who is easily able to pay the first cost, but whose experience has taught him to look still more closely into maintenance cost afterward, finds in this 1,650-pound, five-passenger car the one he has been looking for—because it will do all any 2,600-pound car will do—and more—and at half the upkeep cost—or less.

Cost of Upkeep increases as the square of the weight, the tire makers tell us. And Standard Oil dividends confirm the statement.

Cut the Weight In Two and you divide the upkeep cost by four! Get that—it's the kernel.

But We're a Nation of aristocrats—no matter how we protest we're democratic, we are aristocrats. Every American deems himself of the Royal line. We have pride, plus—more per capita than any other people in the world.

And So It Happens that your American demands more than mere utility in the car he buys—he wants style as well as size.

A Few Years Ago a lot of misguided persons had a brilliant idea. They maintained that the "farmer's car" had not yet been built.

When Asked to Specify, they said the farmer's car should look like a farm wagon or a dump cart—or some other familiar vehicle.

So They Made a Few of those ridiculous, high-wheeled, air-cooled "putt-putters," and gleefully invited the farmer to come and see.

Farmers Didn't Come—they were too busy inspecting the latest improvements in real automobiles. So the high-wheeler soon went out of business.

That Prompted Us one day to make a little investigation and to compile a few statistics—and what do you think?—

We Found that, contrary to the prevalent supposition—the best markets for second-hand cars were not what the blase call the "backwoods and the prairies," but Broadway and 42d, New York; and Michigan Avenue, north of 30th and south of Congress, Chicago!

"All the Rubes Live on Manhattan," once said a famous showman. That was more than half true—the other 49 per cent are portioned out to Chicago and other large centers. There live the Fourflushers, the Johnny-speeders and the remittance boys.

To Get Rid of the Freaks—the experiments, the unfit—there is your market. But to the up-to-date farmers of the East, West and South you cannot sell any but the latest model, made by a responsible concern—nor to the business men living outside the cabaret zones of the big cities.

And So in designing this car we set as our standard a car not only of the highest utility, efficiency and economy, but of style and beauty as well. Because this car must appeal to those who know—business men and successful farmers—who have pride plus—and are entitled to it.

Seven Hundred and Fifty Dollars is a lot of money to a lot of people—and we designed this car to meet the needs and demands of a lot of people.

Have to Make a Lot of them, to make them at all, at the price.

Those People Have a Right to Expect, in the car they buy, something of which they may be proud, as well as one that will perform the service.

That Was No Easy Task. In fact, it was—it had proven to be—an impossible task to other makers, other designers.

Just Consider for a Moment. It's child's play to design and make a $5,000 car. Mechanically the latter presents no problems at all—for the engineer can use any material and as many pounds as he pleases to achieve his results—the buyer of such a car will not only pay the price but pay the "freight" also—the tire and other maintenance bills.

That's Child's Play as compared with the task set our engineers and metallurgists—to design a touring car of ample capacity to take five full grown adults anywhere, over any roads, in comfort;

So Strong it will withstand the usage and neglect such a car receives at the hands of the average owner who drives—but hasn't time or inclination to care for it—himself;

So Light that the tire bills and the maintenance cost will, like the purchase price, be within the reach of that "lot" of people who insist an automobile should be an economy, not an extravagance;

And Finally, of external design to conform to the current mode of "streamline body," and finished and upholstered so that the wife and daughters will be just as proud of the appearance as the owner is of its performance.

There Was a Task to test the skill and the experience and knowledge of the best corps of engineers, and the learning of the best metallurgists known to this industry.

And This $750 Maxwell Is the Result.

Has It Occurred to You that in the entire history of this industry this is the first time that feat has been accomplished? Well, it is.

And We Contend it is still impossible to any other concern—any other organization.

We Were Peculiarly Situated—ideally equipped to do it. Had no old models to get rid of—none with which this would compete. We had the plants, the capital, the talent and—the experience. You can't beat that combination.

Now, Read This—it's what you are most vitally interested in—deliveries.

We Are Making 50 Cars Per Day of this model. That isn't a circumstance, of course. Demand is for five times as many even at this season. Spring demand—we don't dare contemplate.

Our Plants Are Big Enough to make 300 per day—and that is what we are preparing for. But special machinery can't be made over night nor produced by necromancy. So we can't hope to reach a production of more than 200 per day before February at earliest.

So Your Move Is—to see the car at once—your nearest dealer. Have a thorough demonstration. Talk to acquaintance who has been fortunate enough to get one. He'll say more than our modesty permits—more than you'd credit from an over-enthusiastic maker.

Then Don't Delay—get your order in. Pay a deposit to guarantee delivery and to assure it at a time when others will be offering premiums. Then you'll be able to rest easy in the knowledge that you've secured the greatest automobile value ever known.

The "25-4" Roadster—

A natty, classy, speedy, two-passenger car that will go anywhere any car will go---and faster. Same chassis specifications as the touring car (send for the Book).
PRICE $725, FULLY EQUIPPED.

MAXWELL MOTOR COMPANY

(INCORPORATED) DETROIT, MICHIGAN

DEALERS Some makers demand exclusive representation. Still others insist on your taking on a full line in order to get one saleable model. We don't do either. Don't need to. We don't believe in "strong arm" methods, nor will we ask you to drop another make of car you have contracted for. We welcome competition. You can stand this car on the floor beside any other at any price—and the Maxwell will get the lion's share.

NOTE There's a good deal of territory still open. And other territory where we have closed but are not satisfied with the representation. So, in any event, write direct and tell us your qualifications, and why you think you are entitled to handle the greatest seller of them all, or write to General Offices, Detroit, Michigan.

Concrete Roads for the Farmer

Remarkable Popularity Attending the Use of Cement in Highways of the Grain Belt Added to by Favorable Report from Iowa State Highway Commission

CITY PAVEMENT ACROSS COUNTRY BETWEEN LA SALLE AND OGLESBY, ILL.

THE approval of cement-surfaced roads by Mr. H. C. Beard, a member of the Iowa State Highway Commission, and the plans of Shenandoah, a bustling town of 4,500 population in the southern part of the state, to complete a preliminary stretch of such road, a mile and three-quarters in length, early next spring, are quickening interest in this style of durable road which has gained such a remarkable hold upon the people in so short a time. The success of such roads at Red Oak, Ames, Perry, Washington and elsewhere in Iowa is resulting in giving an impetus to the movement for permanent highways in that state.

The cause of durable roads was advanced a long ways by the recent report filed with the Iowa State Highway Commission by Mr. Beard, one of the members. In the course of his report he said: "I wish to close this report with the statement that there is one of the most excellent places for the use of a cement surface highway on the newly made road southeast of Shenandoah, leading into the city. The county and some enterprising citizens have just completed one of the best jobs of improvement there I have ever observed. There is much traffic over the road and if there is a community in Iowa that can afford it, that community is Shenandoah. I believe they would be greatly pleased with the results obtained if they would make a cement road on the grade just finished the earliest possible date in 1914."

No sooner had the report been made than the public-spirited citizens of Shenandoah took the necessary steps to secure this cement roadway, the present plan being to have it completed by the first of next July. Mr. Beard predicts that if this is done 5,000 persons, from Iowa, Nebraska, Kansas and Missouri, will visit Shenandoah inside of a year to see the new road, so great and widespread is the interest in this kind of roadway.

During the season just past, this strip of road has been put to 1.25 per cent grade of the State Highway Commission standards. The county spent nearly $3,500 on the work, the city $500 and private citizens in the neighborhood $1,500. The cement bridges and culverts are all in with a twenty-two foot roadbed over them. The grade is twenty-six feet wide and properly tiled on the sides, in addition to surface drainage. About one mile is outside the city limits and the other part in the city. It is said to be one of the most beautiful highways in Iowa and the land along it is among the most valuable.

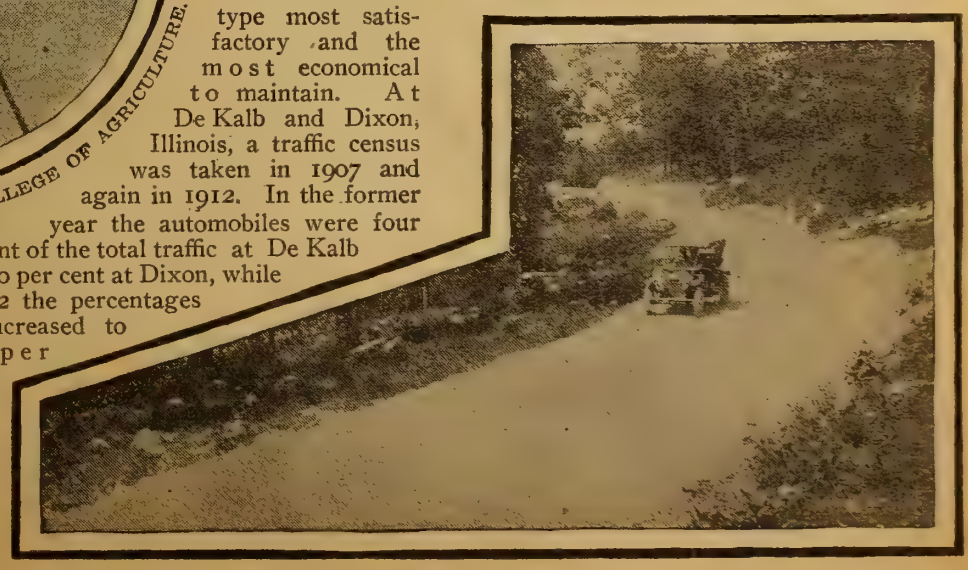
What Shenandoah is thus planning to accomplish, with such enthusiasm, numerous other towns and sections of the grain belt are likewise planning, the next five or ten years promising to see such a quickening of interest in cement-surfaced and concrete roads as has never before been witnessed in the grain belt. It is inevitable in the future that the character of traffic will determine the width of roads and the type most satisfactory and the most economical to maintain. At De Kalb and Dixon, Illinois, a traffic census was taken in 1907 and again in 1912. In the former year the automobiles were four per cent of the total traffic at De Kalb and two per cent at Dixon, while in 1912 the percentages had increased to fifty per cent and thirty three per cent respectively.

This is an indication of what is happening in all parts of the country, both on our city streets and rural highways. The only conclusion to be drawn is that the great preponderance of future traffic will be motor-drawn.

There is a vast field for the development of the motor truck, and provision should be made on most of our main roads for the eight and ten-ton truck. Already truck farmers in the vicinity of Chicago have clubbed together in the purchase of a truck by which a twenty-four-hour trip has been reduced to eight hours, while the delivery of milk from the farm to the city by motor truck is already an economic proposition. It is believed, therefore, that the construction to be undertaken on the main roads should be of a character to withstand heavy motor traffic and heavy horse-drawn traffic, as well as the lighter forms of traffic, and a serious mistake will be made in putting down any other than rigid and durable forms of pavement. This requirement confines paving materials to a very few, and of those few the material the most economical, according to official records, is concrete (crushed rock and cement). It is cheap in the first cost and maintenance is practically nothing.

The cost of the road will depend primarily upon its width, other factors, such as grading and drainage, being the same, whatever the type of road. It is evident that the main roads leading through a county and connecting with the main roads of adjoining counties, will have a variable amount of traffic on different sections. Therefore, near populous centers it will be necessary to increase their width. Furthermore, the fact that the future traffic is to be mostly motor driven, and consequently of a higher speed than that to which we have been accustomed, the main roads will need to be wide enough to insure safety at this higher speed.

While progress and development are so astounding as to frequently upset all calculations, it is reasonable to believe that a twenty-foot road would meet the requirements of the present generation. This width is sufficient to accommodate two lines of fast moving vehicles. While sixteen feet will provide for safe and comfortable passing of wagons, it—[Continued on page 24.]



MOTOR TRAFFIC, WITH ATTENDANT WEAR AND TEAR, IS THE CHIEF FACTOR TO BE CONSIDERED.

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

THE SILO FOR THE BEEF MAN.

That the silo is a necessity upon every stock farm where corn is produced has been settled beyond the question of a doubt by the experiment station workers throughout the country, and by progressive farmers both in and out of the corn belt. That a man cannot dairy most profitably without silage has long been an established fact. Still, there are many men in every community who are dairying, or think they are dairying, without a silo. The value of the silo and silage to producers of beef has long been known, but it has been only within recent years that the silo has been accepted as a necessity among beef men.

The recent advance in prices and the increased cost of feeding cattle has narrowed the margin to such an extent that those who wished to be on the safe side in feeding ventures have been forced to look about for some feeding material by means of which the cost of gains could be lowered. The old prejudices against the use of silage have been swept away. The fears that silage would hurt the digestive tracts of the animals or would cause their teeth to decay and fall out no longer prevail.

Some farmers still argue that they cannot afford the labor of ensilaging corn. If they are utilizing the land to the best advantage they will certainly wish to save the stalks which contain about half the total dry matter of the corn crop and about one-third of the digestible nutrients. No one can well afford to allow that material go to waste upon $100 land.

The work done by the Purdue Station at La Fayette, Ind., and at the Illinois, Iowa and Missouri Stations demonstrates the feeding value of silage for fattening steers. Not only are the gains increased by the addition of silage to the ration, but they are cheapened so much that in a feeding venture what might be a loss on the crop fed to the cattle would be turned into gain or profit.

Often the most skeptical become the greatest enthusiasts after they have used a silo for a season, and their example in a community works much good to the general farming attitude of the community. The silo on a livestock farm means that an ever-increasing amount of fertility is being returned to the land; and that the farmer who owns the farm is a soil builder and not a soil robber.

For a period of four years, tests have been carried on with steers at the Wisconsin College of Agriculture to determine the value of silage as a feed for the fattening steer when fed alone with a suitable grain ration or in connection with either good alfalfa or clover hay roughages fed with a grain ration. In every instance it was found that silage lowered the cost of gains when introduced into the ration, and when fed as the sole roughage (although gains were not so large as when clover or alfalfa hay was added to the ration) the gains were made the most cheaply. It is unwise for the farmer to feel that because silage is a good feed it can be made the sole feed for stock. By nature it is high in water content, low in protein, and high in carbohydrate materials. To be properly balanced the ration should contain some feeds that are low in water content and carbohydrate material and high in protein. For fattening purposes a good day's ration for a 1,000-pound steer would consist of from fifteen to twenty pounds of silage, five or six pounds of alfalfa or clover hay, fifteen to eighteen pounds of broken ear corn and two or three pounds of cotton-seed meal. These figures are subject to variation depending upon weather, individuality of the animal, season of the year, etc. When starting cattle on feed less corn should be offered and the cattle gradually worked up to the full ration.

Not only is silage useful to the beef man for fattening purposes, but it is useful for stocking cattle over the winter, and a farm test made upon a Wisconsin farm under the supervision of the college of agriculture showed an average daily gain of over a pound per day, and the steers came out in the spring in good condition to go on grass. These steers were fed about twenty pounds of silage daily together with what timothy they would consume. When stocking over young cattle on silage it would be preferred to have clover hay or alfalfa hay to feed in connection, as they are higher in protein than is timothy hay.

THE IDEAL PRESENT.

The Homestead wishes each and every member of its large subscription family a merry Christmas. The year has been one of prosperity in most sections of the country, while the prices which are being received for farm products have gone far to offset the yield shortage in many crops. The prospect for 1914 is alluring, so that there is no reason why this holiday season should not be one of unalloyed joy.

When the matter of Christmas presents for friends and relatives is being considered we sincerely hope that as practical and undoubtedly as desirable a present as a year's subscription to The Homestead will not be overlooked. Coming to the home week after week, throughout the entire year, with its message of good cheer and its burden of practical farm information and advice, The Homestead makes, we believe, an admirable present in any farm home.

We suggest the desirability not only of sending in your own annual renewal promptly, but of sending The Homestead to some friend, neighbor or relative as an all-the-year-around Christmas gift, the value and interest of which cannot be overemphasized. There is still time for these subscriptions to be received by us and entered upon our books so that the December 25th (Christmas) number may go out promptly to all new subscribers. We shall hope for a large number of replies to this suggestion.

MAKING CHARCOAL FOR HOGS.

A subscriber, Mr. C. W. Chandler, asks for information concerning the practicability of using charcoal for hogs and desires also some instruction on the process of making said charcoal from corn cobs.

We will say in reply to this that it is a good thing to get into the habit of converting corn cobs into charcoal because unquestionably this product is healthful when fed to hogs.

The process of making charcoal is, in the main, simple and yet we have made a failure of it more than once by allowing the fire to burn the cobs to an ash rather than stopping the burning process when the charcoal stage has been reached. Our pit was six feet long, four feet deep and three feet wide. Some form of kindling must be used to start the fire in the bottom of this pit after which the cobs should be gradually piled on, being careful not to smother the fire and at the same time making as much haste as possible in getting the pit well filled up with cobs. When the flames have worked well through the cobs and the pile is beginning to settle then place over the opening of the pit a close covering. Wood will not answer the purpose because it will burn out. We used a piece of an old smoke stack that was purchased at a nominal cost from a factory in town. Of course, it was flattened out before being put into use.

In addition to placing this cover over the cobs it is a good plan to throw soil around the edge in order to absolutely exclude the air because only in that way will the fire be checked. If there is any at all, no matter how small it may be, the fire will continue to burn and reduce the contents of the pit to an ash which is not what is required. If there seems to be danger of the fire going too far then simply dash on plenty of water and in that way a considerable percentage of the charcoal may be saved.

We have always liked the plan of dissolving a few gallons of salt in some water, after which the water is thrown over the cobs. This seems to add to its palatability and we believe that it is actually beneficial when fed.

IMPROVING PARCEL POST.

The first of the year certain changes will be put into effect in the parcel post law which should make the service of far more use and value to the farmer. The most important change is the increase in the maximum shipment allowed within the "home zones," the weight allowed being increased from twenty to fifty pounds. We summarize the changes herewith:

An increase in the weight limit to zones No. 1 and No. 2 from twenty pounds to fifty pounds.

An increase in the weight to all other zones from eleven pounds to twenty pounds.

A decrease in rates to the third, fourth, fifth and sixth zones.

Books weighing more than eight ounces to be carried by parcel post at regular zone rates, beginning March 16th. Books weighing less than eight ounces to continue in third class at 1 cent for each two ounces.

Provision for mailing gold, gold dust and gold bullion from Alaska, in packages weighing not more than eleven pounds, at a rate of 2 cents an ounce.

The proposed reductions in postage rates are:

Third zone rates, from 7 cents for the first pound and 5 cents for each additional pound, to 6 cents for the first pound and 2 cents for each additional pound.

Fourth zone rates, from 8 cents for the first pound and 6 cents for each additional pound, to 7 cents and 4 cents, respectively.

Fifth zone rates, from 9 cents for the first pound and 7 cents for each additional pound, to 8 cents and 6 cents, respectively.

Sixth zone rates, from 10 cents a pound and 9 cents for each additional pound, to 9 cents and 8 cents, respectively.

The fifty-pound limit is confined to zones No. 1 and No. 2 on the theory that it will enable farmers and merchants to make a much wider use of the parcel post. The increase will permit of farm produce being shipped to the near-by town or within a radius of fifty or 100 miles at a lower rate than heretofore and with a greater maximum of weight, which should add to the market the service has already given the farmer.

It is interesting to note to what extent the parcel post is being used by the farmer. While the Chicago postmaster is quoted as saying that the farmer is not taking advantage of the service, so far as his city shows, the postmaster of Kansas City (a more typical section, so far as feeling the agricultural pulse is concerned) states that fully 200 turkeys and about 500 chickens came to that city in the parcel post since the service was inaugurated early in the year. He adds this interesting fact: "An unusual amount of the skins of fur-bearing animals are being sent by parcel post to hide dealers in this city and the number of skins are increasing daily as the season progresses. Each day we receive from 300 to 500 skunk skins."

This would indicate that the farmers of the grain belt are finding the new service useful and to their advantage, a finding which, we believe, the facts will verify in practically all parts of the section.

HANDLING OF SERUM BY VETERINARIANS ONLY.

The Nebraska Veterinary Association has recently made an attempt to secure the favorable action of the state livestock sanitary board in the matter of placing all the responsibility of animal inspection and the administration of veterinary biological products in the hands of members of that association. The following bill has been drafted and submitted to the sanitary board for its approval:

After January 1, 1914, no person will be authorized or appointed to do inspecting or testing of livestock for interstate shipment, who is not a member—in good standing—of the Nebraska State Veterinary Medical Association. Everyone so commissioned will be required to take an oath of office.

Manufacturers and distributors of veterinary biological products that are administered, offered for sale, or exchange within the state of Nebraska must possess an uncanceled license issued by the U. S. Bureau of Animal Industry, in accordance with B. A. I. Order No. 196, and a permit from the livestock sanitary board of the state of Nebraska.

Every manufacturer or distributor of veterinary biological products, which are to be administered, offered for sale or exchange within the state of Nebraska, must be licensed by the B. A. O. of the U. S. Department of Agriculture as specified in the B. A. O. Order No. 196 and must have a veterinarian in charge that is a graduate of a recognized veterinary college, and if the manufacturer or distributor practices administration or demonstration of his biological products within the state, the veterinarian in charge must be registered with the state board of veterinary medicine.

No person, who is not a registered veterinarian in this state, shall be allowed to administer or demonstrate the use of such vaccines, viruses or any disease-producing biological products that may be dangerous in transmitting or spreading any infectious or contagious disease, without first obtaining special individual permits from the state livestock sanitary board.

Every sale of anthrax vaccine, mallein, hog cholera virus, veterinary tuberculin and anti-rabe serum, in the state of Nebraska, by any manufacturer, jobber, wholesale or retail druggist, or any other person shall be reported to the state veterinarian immediately, giving name and address of purchaser and date of sale.

By the term, veterinary biological products, herein used is meant: Vaccines, bacterins, serums, viruses, antitoxins, bacterial cultures, or any disease-producing micro-organism and its products used in veterinary medicine.

These are matters that interest every stockman in the corn belt because sooner or later we must have uniformity of action throughout all states on a matter so important as the stamping out of livestock diseases. While stockmen believe that a qualified veterinarian only should inspect stock for interstate shipment, yet when it comes to the matter of making it compulsory for an inspector to be of good standing in the Nebraska State Veterinary Medical Association stockmen can see only in this a tendency to create what has been termed a veterinary trust.

There is also opposition to the plan set forth in the fourth paragraph, which, in case this bill should become a law, would require each individual farmer who desired to treat his own hogs to secure a special permit from the state livestock sanitary board.

We are presenting this matter in order that ample opportunity may be given to stockmen to consider the terms of this bill. It must be remembered that in dealing with contagious diseases the individual stockman can accomplish but little single handed. There is no ground for the fear that a dangerous veterinary trust will be formed in any case, but there is a question as to the advisability of requiring the individual stockman to procure a permit before he can use certain biological products on his own herd.

We would like to have the matter discussed by those of our readers who have clearly defined views on the subject.

SIGN YOUR RIGHT NAME.

The Homestead is frequently in receipt of letters which, while worthy and altogether desirable, fail to bear the signatures of the writers. We take this opportunity to lay down the general rule that no such communication, no matter how interesting or valuable, can be printed. It is absolutely necessary that every letter intended for print or for answer in any manner shall bear the name and address of the writer, not necessarily for publication, but as evidence of good faith.

The Homestead is particularly glad at this season of the year to receive letters from its subscribers. In fact, we are desirous of securing such letters in large numbers inasmuch as they keep us in touch with our readers and at the same time furnish material for the interesting new department, found on another page, under the title "The Experience Meeting." When it is not desired that the correct name of the writer should be printed all that is necessary is to sign an assumed name with the correct name underneath, or to add a note asking that the correct name be withheld, and such will be done. It is imperative, however, that somewhere in the communication the name of the writer appear, otherwise the letter will neither be

published nor will any attention be paid to it. This is the rule in all legitimate newspaper plants and will be strictly adhered to in this office.

Send in your contributions and write us for any information desired, but do not fail to sign your name.

THE SCHOOL YARD THE MIRROR OF PUBLIC PRIDE.

In a recent bulletin prepared by the extension department of the Ohio State University, Prof. A. B. Graham points out that it is not uncommon to find in the dwelling house and the grounds surrounding it a manifestation of pride in private property. The house and barn, outbuildings and fences show an appreciation of the beautiful. From year to year more good taste is displayed in a greater number of ornamental plantings and in the keeping of the lawn. The pines and spruces, which in an earlier day were set so thickly that they practically hid the residence, have been cut from directly in front of the house so as to make it a central point of observation. Local pride also manifests itself in clean fence rows, graveled driveways, and mowed roadsides. No one will deny that it takes some time, pains and natural or acquired taste to make the homestead appear well to those who live in the community and to the occasional passerby. The farmer is judged more by the appearance of his farm and buildings than by anything else that may come to the stranger's attention. The well-kept home calls forth much favorable comment, but what is said when the front gate hangs by one hinge, the old walnut or apple tree is the roosting place for the turkeys and chickens, the cherry tree furnishes shelter the winter through for the old scythe and the field mower, the undergrowth of locust and rose bushes hides from view what may be a well-constructed residence?

What might be considered an average pride as to the private property finds itself reflected in the school grounds of that community. The pride of the community as a whole is very often far below that shown in its best private properties. The school grounds are but mirrors in which the communities can see their own pride reflected. An ash pile that has accumulated for years shows the greatest degree of indifference on the part of both teachers and patrons, for its removal from the front door is an improvement that may be easily made.

Perhaps the most demoralizing agency on rural school property is the improperly-cared-for outbuilding. Exposed outbuildings can be screened with a few plantings that in a short time will hide them. It will pay any community to direct its attention to the cleaning up and placing in proper condition of all of these buildings so that those from self-respecting families may not have their sense of common decency and propriety offended. The coal house or wood house, which furnishes a place for the bill poster to practice his art, should be so far back from the road that he cannot reach it without making an extra effort. Bill-posting of every kind on school property ought to be prohibited. This building is driven to only a few times a year by those who haul fuel and the so-called convenience that comes from its being near the road is more than offset by its detraction from the general appearance of the front of the house and yard. In this day the main paths from the road to the front entrance, to the well curb and perhaps the outbuilding should be made of such material that they will always be in proper condition to be used as walks.

In most places where trees have been planted, the entire front of the house is hidden. If the planting were well to the left and right of the building, making the house the central point, with a grass plot in front, the picture presented to the passerby would be much more pleasing. Low plantings, such as lilacs, snowballs, hardy hydrangeas, flowering quince, and syringas should be planted in masses around the borders and in the corners of the school lot. The lawn mower should be used upon the front of the school yard. Too often these yards are allowed to grow up to tall weeds which are cut down only a week or two before school begins.

Any reader of these lines will recall having limped about for a few days with snagged bare feet, which he would not have had if the school yard had been cared for with the same diligence that is displayed on most lawns around our residences. The school yard may be planted in such a way that there will be beautiful pieces of shrubbery in bloom before the school closes, bright colored foliage for the fall, and for winter arched and groined palaces formed by the snow-laden branches of the trees and bushes. Such school properties as command the admiration and respect of the occasional visitor of the school, as well as the patrons, children and teacher, make better citizens, happier children and more hopeful teachers.

ABUSING SIDEHILL FIELDS.

There is such a thing as abusing the farm. We can do it all too easily by robbing the soil and by letting weeds gain possession of the ground to such an extent that it is a fight from start to finish to raise crops. Perhaps however, the most permanent abuse of the farm is in letting ditches get started in sidehill fields. This is an abuse that is seldom corrected entirely, and in many instances a field is divided into two and three parts by ditches washing so deep that teams cannot cross.

A close study of sidehill fields that have been abused seldom fails to reveal the fact that the start of all trouble came about by plowing the field the wrong way of the slope at some time in the past. Instead of plowing in a direction to catch and hold the wash, the field has been plowed up and down the hill at some time, and every dead furrow has become a ditch, or at least has made a great start towards being such. Looking at some of the sidehill fields from a distance, it is still possible with many of them to distinguish the dead furrows that were made ten and fifteen years ago. Some are mere lines and some have developed into ditches too deep to be crossed by farm machinery. The lesson to be learned from these scarred fields is not to abuse them by plowing up and down the hill. One heavy rain following the plowing can do mischief that never can be effaced.

Ain't It Fine Today?

SURE, this world is full of trouble—
I ain't said it ain't.
Lord! I've had enough, an' double,
Reason for complaint.
Rain an' storm have come to fret me;
Skies were often gray:
Thorns an' brambles have beset me
On the road—but, say,
Ain't it fine today!

What's the use of always weepin'
Makin' trouble last?
What's the use of always keepin'
Thinkin' of the past?
Each must have his tribulation,
Water with his wine.
Life it ain't no celebration.
Trouble? I've had mine—
But today is fine.

It's today that I am livin',
Not a month ago,
Havin', losin', takin', givin',
As time wills it so.
Yesterday a cloud of sorrow
Fell across the way;
It may rain again tomorrow,
It may rain—but, say,
Ain't it fine today!

—*Douglas Malloch.*

GRAIN-BELT STATES ON THE BLACK LIST.

Illinois has put up the bars against dairy cattle from nineteen different states. In the form of a prohibitory proclamation Governor Dunne, on advice of the Illinois Livestock Board, has prevented the introduction of dairy cows into Illinois from any of the following states: New York, Pennsylvania, Virginia, West Virginia, Kentucky, Tennessee, Ohio, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Arkansas, Oklahoma, North Dakota, South Dakota, Montana, Texas.

It was pointed out by Governor Dunne that serious conditions now exist as the result of the importation of diseased cattle into Illinois making it necessary, in his opinion, to adopt extreme measures without further delay. The proclamation does not apply to cattle shipped into the state for immediate slaughter, but rules only against cattle imported for dairy purposes.

Investigation has shown that an unusual prevalence of bovine tuberculosis justifies the embargo which has been raised by Illinois against its sister states. It is not believed that this ruling will have any effect upon the milk supply. Of course cattle with a clean bill of health are not excluded. In this way it is expected that the practice of making Illinois the dumping ground for tubercular cows will be instantly checked.

WINTER TREATMENT OF ALFALFA FIELDS.

Mr. A. A. Burger, one of the most successful county advisers in the Hawkeye state, has already done much to popularize alfalfa growing. In the following communication, Mr. Burger discusses one phase of the alfalfa question, which we believe will interest our readers:

It is a notable fact that out of twenty-three men reporting their success with alfalfa, but one who used plenty of barnyard manure failed. From all of the experiments which have been carried on, it is evident that the application of manure to alfalfa fields is the greatest single factor in its successful culture. It is true that alfalfa grows on a variety of soils. It may be seen growing on clay loams, on sandy loams, and on heavy black soil rich in organic material. But on whatever type of soil alfalfa may be growing, the application of manure at the rate of eight or ten tons per acre at the time of seeding, in practically every case, gives beneficial results.

But at this time of the year, alfalfa fields are well started and the problem is how to care for them properly for the winter. Alfalfa which was sown at the proper time in the fall of the year and which secured the necessary rains should be six or eight inches high if it is to withstand the winter. Fall seeded alfalfa should not have been pastured, nor should it have been mowed down unless in either case the mowing or pasturing was done extremely early in the season and the plants have had sufficient time in which to reach a good growth before the freezing weather of winter. Close pasturing or the cutting back of alfalfa has been responsible for the loss of many a fine alfalfa field. This is as true of old fields as of the new seeding. All such alfalfa fields which have a sufficient growth for winter and upon which there is a stand sufficient to warrant a good crop another year should be lightly top-dressed with manure soon after the ground has frozen. The manure when applied in this case seems not only to furnish food for the young plants, but also serves as a protective covering. It is noticeable in all fields where manure has been applied in the fall of the year that the alfalfa better withstands the winter, or, what is more important still, the plants are not so likely to be uprooted by the upheaving action of the frosts of early spring. It must be remembered that the effect of cold weather in the northern part of the state is an important factor to be reckoned with in alfalfa growing. And if we can eliminate the danger of losing the alfalfa stand by properly treating it at this time of the year no time should be lost in doing so.

When manure has been properly applied in the fall of the year, the effects are always evident in the spring by a more vigorous, by a ranker, and by an earlier growth. The effect may be seen throughout the entire season and there is always a decided advantage in the amount of hay secured from such plots. In applying the manure in the fall of the year, care should be taken that it is not applied too heavily. A light top dressing evenly applied will answer the purpose, and there is no treatment which will be more beneficial and which will give more evident results the year following.

While it is possible that only a comparatively small percentage of farmers are able to carry out this suggestion because they are lacking a supply of manure, yet on the other hand, we are coming into the season when there is a rapid accumulation of manure in the yard. If this can be spread lightly over the alfalfa field, it will unquestionably bring better returns than if it were used on any other crop. Those who are trying out an acre or two of alfalfa for the first time should by no means fail to use a light coating of barnyard manure.

COMFORT FOR THE FATTENING HOG.

The life of the hog that makes money for his owner must be one continual round of pleasure. With him there should be but two issues, viz., eating and sleeping. It is all very well while a hog is growing to let him work for his own living, as it were, by rustling in the pasture, doing a certain amount of rooting for bait, but as the finishing season comes on everything possible should be done to contribute to laziness and inactivity.

The fattening hog always relishes a change of bedding. What man is there who has not felt more than repaid for the labor involved in cleaning out a hog pen, and bedding down the same simply by the smiling countenances of his hogs when they were admitted to the newly cleaned quarters. If animals under any circumstances can possibly experience a feeling of gratitude, and express it outwardly, we believe that it is done under these conditions. A bunch of well hogs can have an enormous lot of fun in working over a clean bed, and we believe that it contributes immensely to thrift and it aids much in fattening.

Their good time can be added to still more by introducing some variety into the ration. Straight corn will not make as cheap gains as corn supplemented with a little oil meal or tankage. These supplementary foods are exceedingly palatable, and they are very rich in flesh forming qualities. They will answer every purpose when fed dry and if shelled corn is used instead of ear corn, simply place the supplementary food on top of the shelled corn when it is put into the troughs. A feed of soaked oats or ground barley occasionally will be relished and it tends to whet the appetite and keep the hogs on full feed without running the risk of making them stale.

In matters of this kind one can be guided a little by his own appetite. None of us would care to be compelled to live on the same thing meal after meal; and we have noticed that successful swine men act as if the hog were built a little on the same plan. It is simply another way of giving the porker a good time. Variety in the ration means that little surprises will keep a bunch of hogs ever eager for the next meal, and while they are in this condition, it may be depended upon that they are making the best kind of use of their grain.

ALFALFA HAY FOR HORSES.

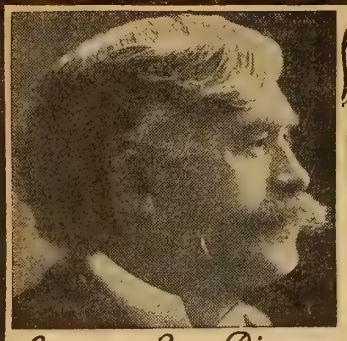
The 1913 drouth which covered a considerable area of the corn belt has accomplished something by way of popularizing an already popular legume, alfalfa. In this connection attention is called to an experiment that has been conducted at the Kansas station to determine the relative feeding value of alfalfa hay, timothy and prairie hay.

It was found as a result of feeding 900 horses for a considerable length of time, that corn and alfalfa make the cheapest ration that can be fed to a work horse. It is also claimed by Dr. C. W. McCampbell that alfalfa is one of the best forms of roughage for a horse when it is properly fed. Corn, when fed with alfalfa hay, gives as good results as a ration composed of oats and prairie hay, while in addition, the cost of the former ration was one-third less than the latter.

A horse weighing 1,150 pounds requires ten pounds of alfalfa hay, daily, eight pounds of corn and two pounds of oats. It was found that horses fed oats showed no more spirit than those that received corn. It seems as if spirit and endurance depend more on the amount and quality of the feed than on the particular kind of feed.

This experiment was carried on with artillery horses belonging to the United States government. It is our opinion that the quantity of feed found sufficient for these horses will not answer the purpose for the farm work horse of the same weight, viz., 1,150 pounds, while at hard labor. It is true, however, that the average man feeds too much hay, so that frequently the horse is burdened rather than benefited by the consumption of a large quantity of roughness. However, ten pounds of hay, eight pounds of corn and two pounds of oats seems to us to be insufficient for the farm horse when he is being put through his paces during the summer months.

Sidney I. Roy, of Hannibal, Mo., while a witness before the house committee on roads, advocated the construction of model roads by the federal government in every county of the country. He opposed the idea of the federal government spending money to construct main arteries across the continent.



James M. Pierce

THE PUBLISHER'S VIEWS —ON— TOPICS of THE TIME

MERRY CHRISTMAS.

CHRISTMAS on the farm! The very words have a rollicking, joyous sound. They ring with anthems of good tidings and good times. I pity the poor little boys and girls who have to get all their knowledge of jolly old Santa Claus second-hand in some city home, who lose nine-tenths of the zest and the jest of the occasion by not living in the country.

Those mysterious, secret conferences between father and mother over each one of the little brood, what to get that will please them all the most. Those wonderful trips to town, with heavy wrapping paper concealing bulging mysteries and an air of secretive conspiracy pervading the whole house, while every one, from young to old, tiptoes back and forth with packages more or less clumsily concealed behind them. Then the surprises at the last! And the tang in the air, whether it's a white Christmas or not, with even the dumb brutes seeming to realize that something great and wonderful and altogether out of the ordinary is happening! Isn't Christmas the most wonderful time in the whole year: that is, of course, if it is spent on the farm, where it ought to be?

If there is any season of the year that makes me downright glad and absolutely contented just to be alive it is the Christmas season. You can't beat it. The very atmosphere is tense with expectation, surcharged with emotion. Everybody has a different air about them; the grouches disappear as by magic. It is a time when everybody is worth knowing; when even the biggest bores of other occasions are welcomed as good fellows well met. Do you know why all this is so? It is because we all, regardless of age or station or crops or anything else, are renewing our youth again. We are once more children, care free, glad to be alive, contented with every moment as it passes. You remember the theme of that touching poem, "Rock Me to Sleep, Mother," how it runs with its haunting cry: "Make me a child again, just for tonight." We're growing old, the crow's feet are visible around our eyes, the wrinkles are getting deeper and more numerous. Then all of a sudden Christmas comes and some power makes us a child again. But, oh, the pity of it—"just for tonight."

That is the only drawback to Christmas; we forget we are children and renew our manhood, or womanhood, with their attendant work and worry, in just a day or so. The Christmas spirit falls off our back, like a pack off the back of a peddler, and we're just ordinary, hard-working grown-ups again. What I would like to see more than anything else would be a Christmas spirit that would last all the year around, not just one day, but 365 days—rainy, sunshiny, barren, golden, all kinds of days, the whole year around.

I wish I could come into every farm home in the entire grain belt with just this message: Good cheer and good fellowship not on Christmas alone, but on every one of the 365 days of the entire year. Let's give our presents on Christmas; a present to everyone we know and love (father, mother, George, Mary, the home folks, the hired man, the neighbors, the men we've had pleasant dealings with throughout the entire year) so far as lies within our means, no matter what the presents may be.

But let's not stop at that; let's band together to continue the giving throughout the entire year. Not costly things—as men measure gifts in the scale of dollars and cents, as so many bushels of corn for a new dress for mother, or so many bushels of wheat for a new gun for George or an organ for Mary—but smiles and pleasant thoughts and well wishes and all that sort of thing. It won't cost us a cent, it will do us a lot of good and it will make it such a good, worth-while world. Will you join me in the plan?

Here's our hands on it, all my farmer friends for whom I am hoping the past year has been one of unalloyed enjoyment and the coming year one of greater promise than any that has preceded it, and here's the start, for my part: As merry and happy and blessed a Christmas to you as any man, woman or child ever had in all the world. That is the gift and the wish which go out of my heart, full of thankfulness and contentment, to you all, every one of you, on every farm in the whole grain belt.

THE PRESIDENTIAL PRIMARY.

EVERY farmer in the country should rejoice that at last all three of the great political parties unite in a demand for presidential primaries. It means not only that every voter will have absolute freedom in selecting the nominees for the highest offices in the land, but that no longer will the grain-belt farmer be disfranchised in favor of the low-down, ignorant, black roustabout and cotton picker of the South.

President Wilson has made the motion for presidential primaries unanimous by the splendid suggestion in his recent message to congress. He has robbed the issue of all politics and partisanship and done a real, patriotic service to his fellow voters. The party score now stands three to nothing in favor of a direct vote.

Before I take up the president's suggestion in detail, let us stop a moment and consider how unanimous is the motion. There is not one of my readers, I am sure, but will recall the situation as it existed only eighteen months ago: both the old parties either openly opposing presidential primaries or ignoring them when the prospects or results did not suit the will of the political bosses in control. You remember what happened in the republican national convention at Chicago, don't you; delegations duly elected by the people unseated by the national committee and in their place delegates seated who were chosen at secret caucuses or rump conventions or by no formality at all, the sole qualification being that the delegates thus seated would vote for the candidate favored by a majority of the national committee. That was the beginning of the end. The handwriting on the wall began to be visible at that moment.

What is the situation today?

There are three great political parties: republican, progressive and democratic. What is the stand of each on this question of presidential primaries?

First, the republicans. Eighteen months ago the national committee refused to recognize delegates elected at a direct primary, giving as excuse that they had no authority to do so. Last week the legal sub-committee of the national committee, in an opinion handed down in Detroit, decided that the national committee has authority to change the manner and method of choosing delegates to future national conventions so as to provide that delegates be chosen in such manner as the laws of the several states from time to time may provide. In other words, delegates shall be chosen according to the laws of the state they represent, rather than according to the discretion of the committee itself. This decision is exactly opposite to the rulings of the national committee, in Chicago, in June, 1912. It legalizes and recognizes direct primary delegates who were refused admission to the convention only eighteen months ago.

Nor is this all. One of the leading republican party leaders, Senator Cummins, of Iowa, aided by such stalwart party men as Governor Hadley, of Missouri, and Senator Borah, of Idaho, proposes a special republican convention to change the manner of selecting delegates, so that they shall be chosen at primaries instead of by caucus and convention. A call for such a convention will undoubtedly be issued in the near future.

Nor is this all. The republicans of New York, the most corrupt political state in the Union, under the domination of political bosses more than any other commonwealth, have already held a meeting and decided in favor of direct nominations, the radicals being in complete control.

Second, the progressives. This party came into being as the result of a revolt against the party which refused to honor presidential primaries. One of its chief planks is a stirring declaration in favor of direct nominations for all offices. The progressive stand on this subject is so strong and so well known as to call for little discussion from me at this moment.

Third, the democrats. President Wilson, as the head and front of the party, in his message to congress last week, had this to say:

> I turn to a subject which I hope can be handled promptly and without serious controversy of any kind. I mean the method of selecting nominees for the presidency of the United States. I feel confident that I do not misinterpret the wishes or the expectations of the country when I urge the prompt enactment of legislation which will provide for primary election throughout the country at which the voters of the several parties may choose their nominees for the presidency without the intervention of nominating conventions.
>
> I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties; and I suggest that these conventions should consist not of delegates chosen for this single purpose, but of the nominees for congress, the nominees for vacant seats in the senate of the United States, the senators whose terms have not yet closed, the national committees, and the candidates for the presidency themselves, in order that platforms may be framed by those responsible to the people for carrying them into effect.

Here is the leader of the dominant party going further than either of the other two in urging this reform. With what result? Democratic senators and representatives, and party men of all station and standing, are literally falling over themselves in their eagerness to adopt the president's suggestion. Washington advices declare the president's suggestions will be crystallized into laws within a few weeks; bills embodying them have already been introduced. The new broom of democratic reform is sweeping clean. The first obstacle it swept away was the last remaining vestige of politics and partisanship in the matter of presidential primary reform.

Here is a situation in which every grain-belt farmer, without regard to or thought of politics or partisanship, may well rejoice. Last year the republican grain-belt farmer was disfranchised as completely as though he were refused permission to go to the polls. How? By giving to the carpet-bagging white and the ignorant black in the South a representation from six to thirty times as great as that of the grain-belt farmer. In the Chicago national convention last year as many republican delegates were seated from Alabama as from Minnesota, as many from Georgia as from Iowa, as many from Louisiana as from North Dakota and South Dakota combined. This, notwithstanding the fact that the Alabama delegates were selected by a mere handful of postmasters and professional jurors, while the delegates from Minnesota were elected by the votes of thousands of farmers. This, notwithstanding the further fact that at the preceding presidential election Alabama cast only 25,305 republican votes while Minnesota cast 195,843 republican votes. In other words, one ignorant black voter of Alabama was considered the equal of eight intelligent Minnesota farmers. And so with the other states, the ratio being one ignorant negro in Louisiana considered the equal of thirty progressive, prosperous farmers in North Dakota.

But now all three of the great parties agree that this should not be; that it is wrong, unfair and unjust. I do not know of any recent occurrence in which the farmers of all parties may so well rejoice. Their votes will be counted now. They have been enfranchised. Their voice will be heard in Washington, in the councils of all the parties, wherever these councils may be held. It is a great victory, long deferred but none the less gallantly won. It is the greatest political reform, I believe, of many years. It is so great and so far reaching I feel like declaring it marks the beginning of a new era, almost of the political millennium. I rejoice with my fellow farmers. The yoke has been lifted at last. After many weary years of waiting, at last we count for something, at last our voices will be heard, our votes counted; at last we can see the sun breaking over the next hilltop and approach the horizon in the knowledge that better things lie just beyond.

James M. Pierce

A LET-UP IN ROAD DRAGGING.

We have noticed with some degree of disappointment that roads that were diligently dragged up until corn-husking time have been left religiously alone since that date. Township trustees and county supervisors have acted, in most cases, as if the roads were not used during the late fall and winter. As a result of carrying out this policy the surface of many highways will become solidly frozen while in a rough condition. This means discomfort in travel and the shaking to pieces of vehicles during the rest of the winter.

We claim that there is no excuse for the practice of so abruptly stopping the drags. They are needed not only late in the fall, but they can be used to very great advantage during the winter while the ground is bare. Even after the ground freezes it seldom happens that we have periods of longer than two or three weeks when the surface does not become greasy and that is an ideal time to get busy with the drags. If the drag fund is exhausted before the approach of winter then that is the best evidence that one would desire to demonstrate bad business management on the part of the road overseers.

The winter months furnish the period for farmers' social enjoyment. The enlargement of one's circle of friends, if it is made at all, must be made when the work on the farm is slack and yet when our traveling must be done over rough roads there is no incentive to discharge the ordinary social obligations that should be discharged in the interest of a healthful community life.

We are well aware of the fact that the trustees and road overseers are not going to get busy as the result of any of our advice, but we are directing our remarks, in this case, to those who have the highest authority in having these matters attended to, namely, the folks of the farm. If the roads are not in condition to suit you simply go after those who are responsible for their condition. You can just about have your own way in these matters if good judgment is used in the presentation of your disgust over the condition of the highways.

So fundamental is the upbuilding of rural life, in the opinion of Dr. P. P. Claxton, United States commissioner of education, that the observance in the schools of one day each year as "Agricultural and Rural Life Day" should become a national custom.

THE EXPERIENCE MEETING

Facts Learned by Busy Homestead Workers Passed Along for the Profit and Pleasure of Others, to the End That Farming May Be Made Easier and More Productive.

BOOMING USELESS LAND.

To the Editor of The Homestead:

I notice in different northern papers advertisements of Florida land companies who are trying to get people to leave the "frozen north" and go to the land of sunshine to make homes where they can raise three crops a year on the same land, etc.

Will say that I did not find one word in ten true of the stuff sent me, so far as I could find, and I was in Palm Beach county all winter from December 26, 1912, to March 10, 1913. I never saw my five-acre tract, it is so swampy and sandy. The company's agents almost laughed in my face when I asked them to take me to see it. Money is all they are after. Lakeworth is the new town this company is booming. There are no song birds, no flowers, no grass, only that which has been planted and cultivated at a big expense. It is a good place for the rich to go to spend the winter and to plant fruit and truck as a pastime, but a poor man cannot make a decent living. Everywhere the soil is nothing but sand as white as snow, except in a few places and it takes a fat purse to buy these.

I am writing this in order that you may protect your readers against being defrauded out of their hard-earned savings. I have no ax to grind, but I want to say, stay where you can see a green field and hear the birds sing in the spring. H. D. Packard.

A RECORD-BREAKER CORN YIELD.

To the Editor of The Homestead:

We are sending you a brief account of the greatest acre of corn yield ever produced in the world from a northern variety of corn. We have undisputable evidence that W. M. Hutson, Bardwell, Ky., Carlisle county, grew 231 bushels and thirty-one pounds of shelled corn per acre upon a plat of ground 5x32 rods, this being the result of the acre contest of Graves and Marshall, Antwerp, Ohio. The husked corn from this plat weighed 14,904.58 pounds and as the result of shelling 100 pounds of ear corn eighty-seven pounds of shelled corn was produced, or 87 per cent. Upon a basis of 87 per cent of shelled corn, the 14,904.58 pounds would net 12,966.98 pounds of shelled corn or 231 bushels and thirty-one pounds.

Ohio. Graves and Marshall.

A CINDER FLOOR.

To the Editor of The Homestead:

The best stable floor we have we made nine years ago from cinders. We screened the cinders and used the coarse part below, about a foot thick, using one part of cement to ten parts of cinders, mixed dry, only using enough water to make it damp. This mixture was tamped well and on top we put four inches of the fine cinders, using four parts of cinders to one part of cement. This can be made stronger next to the manger by mixing sand and cement and pouring it over the cinders. The same team has been standing on it all these years and they do not show any bad effects. It has never been slippery and we have only repaired it a little once, cleaning out the low places and filling them up. It is very cheap. A Reader.

OBJECTS TO CERTAIN FORMS OF CRITICISM.

To the Editor of The Homestead:

It has indeed become a pastime to criticise farmers and their ways of managing things, but when it comes to exposing their home life and complaining how they treat their women it is time something was done.

The farm women do work hard. There are times of the year when work is forced upon them, when the men folks of the farm are also overburdened and can give little or no help, and household help in the country is almost impossible to get because employment in the city gives more leisure and higher wages. However, I did not start out to discuss the help question, but to show the farmer in a better light in his home relations.

The farmer is no less kind, neither has he less love or respect for his family than our city friends who will not dispute that our best and greatest men have been reared on the farm. The city folks have for ages looked down on the tiller of the soil, when everything they buy over the counter comes from the farm. They ought to think it a privilege to buy the things the farm produces, but in these advanced ages they have changed from making fun and turned to giving advice as to how to work and how to increase the crops, how to treat farm women and lighten their burdens. They have not told him how to increase his income except by harder and more careful work, and by spending more money for improvements and tools which means more profit for our city brothers. Everyone knows that it requires a considerable outlay of money for the farmer to give his wife an easier time.

I believe in scientific farming and in improvements of all kinds, but things will not be much better for us or our wives and there will still be no millionaire farmers until some good man comes forward and makes laws that will place us on an equal footing in business. I hope the day will soon dawn when we farmers can take a basket of produce to town, or whatever we have to offer for sale, and tell the merchant what we can afford to take for it. In this way our poor, overworked women will have some value placed on their labor and time for raising chickens, packing the eggs, milking the cows and churning the butter. What have our city brothers to contribute toward making our wives more independent that they may have some luxuries? As it is now we have to take whatever we have to sell to market and ask, "What will you give for this?" and we have to take their stated price regardless of the cost to produce it and the value of labor expended. If we need something we turn to the same man and ask what he will take for calico, lard, flour or whatever he has for sale. We take what he gives and give what he asks for it.

Let some whole-hearted man step forward and show us how we can have an equal share of the profit. We do not ask all, but allow the men and hard-working women that feed the nation a right to value their labor and it will not be asked why there are no millionaire farmers and why our women have such a hard time.

Highland Co., Ohio. Eli Wilson.

SIMPLE DOPE FOR HOGS.

To the Editor of The Homestead:

I have noticed considerable in your paper about the serum treatment for hog cholera and will say that I have had much experience with this disease. My experience has convinced me that bicarbonate of potash will cure cholera in hogs. My mode of treatment is to pen the sick hogs by themselves and for each sick hog give two heaping tablespoonfuls of the potash dissolved in boiling water each day. I usually give in this proportion in a little bran mash or in the drinking water. This should be continued for three days and then given for a day or two in much smaller doses. The non-sick hogs should be given, say, a heaping tablespoonful of the potash in slop for each hog once a day for a few days and the pens and lots and runways should be cleaned up. J. E. Sammon.

THREE KINDS OF STABLE FLOORS.

To the Editor of The Homestead:

The universal kinds of horse stable floors are made of clay, plank and cement. The clay floor is good for horses if it can be kept level. About one load of clay to the stall is enough.

A plank floor will be found drier than a clay or cement floor, as both draw dampness, but it will not last over about eight years.

A cement floor is cold and damp unless lots of bedding is used. Some put the plank on cement for the reason that the cement will keep the plank from rotting underneath and also when they are worn through the horse will not go through. Another plan is that of laying the plank crosswise the stall and bolting them ino the cement before it is hard, or better still, sinking the oak pieces into the cement before it is hard. The latter plan does away with anything on which the horses might get hurt.

Subscriber.

STRONGLY ENDORSES SWEET CLOVER.

To the Editor of The Homestead:

I want to set forth what I think will be a soil builder and put humus in the soil faster than any way I have seen proposed or think of myself. Sweet clover should be sown in the corn just as it is getting its last cultivation, in front of the cultivator. This can be done with hand seeder and it may be that the best and quickest way is to take a flat-bottomed sled that will pass between the rows nicely. Hitch a trusty horse to same or have a driver assist you. Ride on this sled facing back, for experience tells me that this is proper, for the blades of the corn catch and draw in the seeder and you have to stop and shut off business quite often if you attempt to walk or go with face forward. You will get to sow but a short distance on either side as the foliage will stop the seed in their flight. To sit on a low box so as to be down below as many blades as possible will be the best way. Riding a trusty horse and sowing over the tops of corn is another way, but there might be a partial skip where the horse is in the row; however, it might not amount to much, for part of the seed will go out in front of the horse's head and light at proper places. If the horse is ridden, it becomes necessary to cover its ears or seed will lodge in them and cause trouble.

My uncle used to sow rye in corn, broadcast, by riding a horse, and as we are all, to a certain extent, indebted to others for their successes or failures, and all may profit from same, it is with this spirit that I write some of my own ideas and some that come to me second handed. If they come third handed to any one and bring them value, I will be glad.

Now this newly-sown sweet clover, if good seed, will soon come up and make you proud of what you have done. Do your part to protect it until it is ready to turn under. I think the most suitable and sure way is to husk the corn row by row so that the wagon and team straddle every row, breaking down the stalks evenly all over the field. These stalks will keep the winter winds up over and not down in contact with this young growth, and it will also keep the snow more closely to where it hits the earth and not let it drift deep in places and leave the ground exposed in other places.

Do not pasture off the stalks, but leave them to be cut up either with a stalk cutter or a heavy-weighted disk harrow. I am not sure but that the harrow is best, as it can be made to do double work, viz., cut the stalks and cut up a few inches of earth which will fit in nicely with this mixture of young clover and dry stalks, causing the proper change to come to both stalks and clover.

I believe treating a field in this manner will make it capable of producing two crops of corn without much damage to the land, but to follow with some other crop would possibly suit some better, so I will say, think and plan and then tell others.

I sowed corn extra late last year as an experiment. I cut the corn and left the sweet clover to get along as best it could. We did all our oat sowing and then came to this patch to finish, as we planned to sow oats in it and cut it as a mixture of clover and oats, but, to our astonishment, it ended one sided, for the clover came on so lively that there was but one or two little places that the oats ever headed out or got up six inches high. I have more growing for next year and am planning to sow lots more. I have great confidence in sweet clover.

Delaware Co., Ohio. M. D. B.

"THE EXPERIENCE MEETING" has been made a regular department and the co-operation of every Homestead reader is requested. Already the letters from farmers are pouring in, but more are wanted. Write us your experiences in any line of farm work, how you increased your yield, how you lessened your labors, how you added to the family comforts or pleasures. Your name will not be printed, if your say so, but sign your right name and give your address. "The Experience Meeting" will be the forum of the farmers of the grain belt. Send us a letter today.

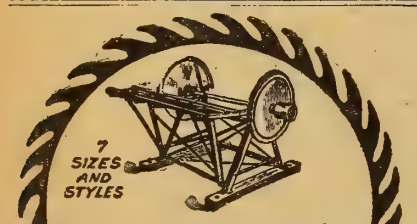
AND NOW WHAT ARE WE GOING TO DO?

To the Editor of The Homestead:

At this time of the year after everything has been checked from the fields we find we did not do as well as the previous year. We find on our lists a shortage of crops. We thought we had done everything to get good crops, but still we fell short at harvesting time. Some of the causes for poor crops are beyond our control, for instance, the elements of the weather. Other causes are under our control and we should determine at once what are the causes of our poor crops.

And now what are you going to do? Don't get discouraged if your crops have been poor. Success attends only on those who, after one setback, grit their teeth and start over again. Your failure in crops this year will be your success in crops next year providing you take your lesson to heart. The lesson failure teaches us is the best one we can get providing we make use of that failure. After we find out our mistake we must not make the same one again. You know that fire is hot, you perhaps found that out while still a child, and knowing it now you would not think of placing your hand on a red hot stove. Try to learn the lesson your failure in crops has in store for you the same as the one you learned when you burned yourself the first time.

We all know all we can do to get good crops are good soil with plenty of the right kind of plant food and good care. Your trouble might have been that you were trying to see how much land you could work. Do not try to work too much. Fewer acres well cared for will give better results than many acres only half cared for. I believe this to be one of the main reasons most of the old farmers will have, for they want to do too much and the result is nothing well done at all. Do a little at a time and do that well. Success comes through doing things right. The weather will be a drawback some years, but it is the man behind the cultivator and the conditions of the soil that play the most important part. Tone up your land, plant no more than you can do justice to with your cultivator and then see how your crops check in at the next harvest. F. A. Kuhn.



Shall we send you free book about
APPLETON WOOD SAWS
It shows pictures of all our buzz, drag, circular log saws and portable wood sawing rigs, with or without Appleton Gasoline Engines. Tells you straight facts which we guarantee our saws to back up. Opens a way for you to make money this Winter sawing your own and your neighbors' wood. You want a saw to last—made strong—boxes that never heat—don't experiment with cheap saws then, buy an Appleton, 40 years the standard. Send for booklet to-day.

FARM FURROWS
TURNED BY A PRACTICAL FARMER

One of the most inconsistent men I ever knew was a loud talking skeptic of the Bible and of religion who was an earnest believer in every word of a certain almanac, and who drank gallons of patent medicine with the implicit faith of a little child.

Plowing and breaking in December is rather unusual with us, but this open style of winter made it possible this year and a great many took advantage of it.

The Scriptures say, "Whatsoever thy hand findeth to do, do it with thy might; not "Whomsoever."

Truth usually wears such plain clothes that a whole lot of people refuse to receive it when it knocks at the doors of their minds.

Some of the "old timers" tell us that plowing stalk fields late in the fall will result in a weedy field the next season. This may or it may not be true, but they will have their "I told you so" in working order next year whether the fields are very weedy or not.

Some folks can't bear the smallest sort of a cross without acting as cross as a sore-headed bear.

It would be too bad to end the journey at the poor farm after traveling a good part of the way in a touring car bought with a mortgage on a nice little farm.

It is a pretty good thing to remember that no boy ever thought more highly of his father for having heard him use profane language.

A great many of our wants are only hankers.

The man who keeps improving his farm as the years go by is always one whose mind keeps growing, and that is about the richest harvest to be gathered in this life.

Many a farmer who is careful never to overwork a horse fails to take proper care that the load upon the shoulders of the mother of his children is not greater than she ought to bear.

The right time to start the tank heater is before the tank is full of ice. It takes a little extra work and some fuel, but the satisfaction of seeing the horse and cattle drink their fill will pay for both. The increase in butter and beef is extra.

The boomer's prospectus of a distant country never paints the drawbacks.

The man should keep his troubles, like his pigs, in his own pen, and not allow them to bother anybody else; but his pleasures, like the flowers in his garden, should yield their fragrance for every one who passes by.

Now is a good time to observe whether the clover hay was cut at the right time or not. If the stalks are bare of leaves the hay was cut too late and is very little better than corn stalks.

Earth floors are the best for all kinds of stock if they can be kept clean. Cement floors are easy to keep clean and are all right if plenty of bedding is used. It seems that everything lacks an "if" of being a perfect barn floor.

The man who is the least worthy to be heard is the one who usually pitches his voice the highest, his wisdom running to sound rather than to sense.

When some farmers hire a hand they seem to think that it is a part of his business to be filled up with an account of all the faults of every other hired man they ever had on the place.

There are fewer corn shocks standing in the fields this fall than in former years. The silo and the shredder are the cause of part of this, and more farmers are stacking their corn. This is the kind of farming that makes high-priced land.

The fellow who loves to give advice generally wants to be just a signboard to stand still and let others do the going.

Our roads were quite smooth when the ground froze this year, but would have been still smoother if they had been dragged once or twice. Less tall and more dragging will make better earth roads. Almost any good thing can be talked to death.

When the landlord shows no interest in his renter farther than to receive the rent when it falls due he may as well expect the renter to skin every cent out of the farm he possibly can. The landlord and the renter should be good friends to each other. It is to their mutual interests financially, and it makes for a longer tenancy, which is best for them socially, and for all the interests of the entire neighborhood. One can hardly imagine anything more disturbing and detrimental to the rural community than a constantly-shifting tenantry.

Before snow comes is the right time to see if the small bridges and culverts along the farm have become clogged with earth or rubbish. They may need to be in working order early next spring.

Honesty always pays. Some folks seem to be mighty slow in finding it out. Last year I bought several barrels of New York apples. In every barrel the biggest and best were packed on top; in the bottom were a lot of inferior ones. This year I will buy no New York apples, but will purchase western fruit picked in boxes according to standard and with the grower's name stamped on the box. Those eastern folks will have still more abandoned farms to complain of if they don't do better.

The crow has a price of 10 cents on his head in our county at the present time. Is it possible that the crow is as black as he is painted?

I think farm folks do not do as much mean gossiping as they used to. They are getting bigger and broader all the time. There is more intelligence among them, their interests are wider, there is less of jealousy and spite, and the feeling between neighbors is more generous and friendly. This is a splendid sign of progress. The world is too big and good to be spoiled by littleness.

It is now claimed that the packers have a corner on the egg market, hence the high price of eggs. Perhaps they have, but I do know that few hens are laying now, and it is likely this has something to do with the egg shortage.

Mrs. Furrows likes fall plowing for the early garden but spring plowing for the late, main garden. She says spring plowing stands dry weather better and early stuff starts off better on fall plowing.

Walking has become almost a lost art. The pony, bicycle or motorcycle furnishes the youth a means of saving his legs, even if he is to go but a few rods. When I was a boy all youngsters had to run errands afoot.

Farming may have been unprofitable the past year, but I have it in my head that the city man is not going to be as prosperous during the next twenty-four months as he might be. The effect of our short crops is going to reach him during this time.

The Experience column is very interesting and should and could be made permanent if more "ordinary farmers" would tell of their success and failures. Just at present it would be interesting to hear from those who have tried cutting up sweet corn or fodder corn for winter feed. Was it better or not as good as field corn?

You wanted a really high-grade, economical car with lots of power and comfort, at a moderate price. Jeffery has built it.

NOW you can have an automobile combining comfort, quality, beauty and economy at your price, $1550. This extraordinary achievement of the Jeffery Company is this year's sensation.

You have always wanted a comfortable car of some beauty but five or six hundred dollars bought only the car — not the comfort or beauty. A thousand dollars would buy a car that looked pretty good and rode well on ordinary roads but you knew it couldn't have the quality, power and stability.

Your level-headed demand for economy of operation, gasoline, oil and tires kept you from paying a fortune for one of those big heavy cars that cost another fortune to maintain.

That's why we put into the Jeffery Four and Six the results of the study, experiment and accepted practice of the best motor car designers of America and Europe and produced America's first high grade, economical car of power, stability, beauty and comfort at a moderate price.

We have accomplished what all other motor car manufacturers have either overlooked or striven for in vain.

How have we done it? By focussing upon the production of this car the resources, brains, buying power, financial strength, manufacturing experience and equipment of the mammoth Jeffery organization. Forty years of experience—five and a half millions in assets—three millions in the latest and best machinery and the highest credit in the industry.

Who Else Could Do It?—Who Else Dare Try?

Space does not permit us to give you the details of the final triumph here. Write for a Jeffery Circle. It tells about the light monobloc motor that drives this car. Twenty miles an hour in 7 seconds—40 miles an hour on second speed in 20 seconds and in fifty-five seconds 50 miles.

This motor is larger than that used in 52 out of 86 cars exhibited at the Paris Show this year. You will learn that vanadium steel and materials used heretofore only in very expensive cars are used in The Jeffery and that the U. S. L. electric starter used in this car costs more than any other starter.

Not a single car in America selling under $2000 except the Jeffery is equipped with the U. S. L. Imported annular ball bearings are used instead of any domestic bearing and Rothschild designed the body.

When you consider the bare facts — when you question your nearest garage man or mechanic you will agree that The Jeffery is the car you have waited for because it is all that any motor car should be at a price that the best motor car should cost.

U. S. L. starting and lighting, without chains, gears or belts. Imported annular ball bearings. Speed it up to forty miles an hour, shut off your engine and coast half a mile.

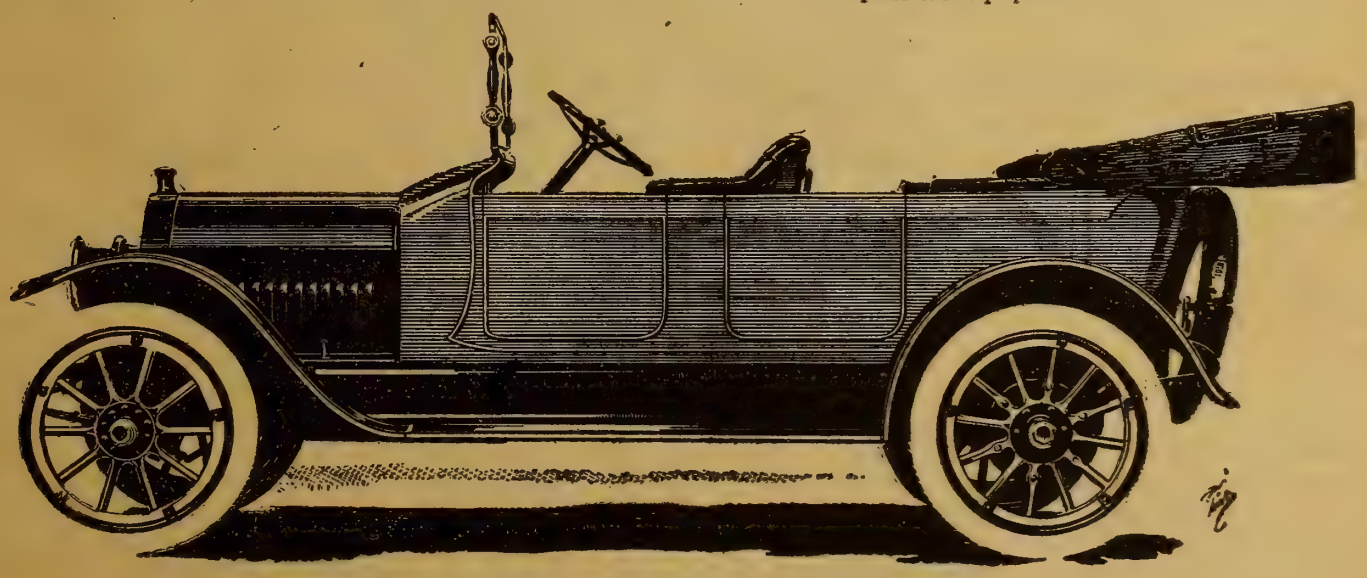
Spicer universal joints, combination force feed and splash oiling system; four forward speed transmission—the lightest and easiest to operate.

High grade full floating type rear axle on imported annular ball bearings—a delight to the mechanic. Flexible leather coupling between clutch and transmission.

Vanadium steel in springs, rear axle drive shafts and front axle.

Rayfield carburetor; left drive and center control. Pressure feed gasoline tank; pump operated through cam shaft. Bosch Duplex ignition. Solar lamps with dimmer, operated by four position switch.

The Jeffery Four equipment includes Neverleek top, rain-vision windshield, Stewart Warner speedometer, ammeter, extra demountable rim, with carrier, electrically lighted dash replete with latest attachments. Klaxet horn and complete tool equipment.



Jeffery Four $1550

The Jeffery Six is a duplicate of the wonderful Jeffery Four, except for size. The cylinders are cast in pairs. This car, which sells at $2250, is in a great many ways as remarkable among Sixes as its smaller brother is among the Fours. We built it for those who will drive nothing but a Jeffery car, but who prefer a Six. It is light—actual scale weight, 3700 pounds, with full equipment. We make it luxurious and beautiful without making it extravagant. We know that a better Six cannot be built.

The motor—3⅜ x 5½—develops 48 horse power. The bearings are imported annular ball throughout. The ignition is Bosch Duplex and the starting and lighing system is the U. S. L., of course. Wheel base, 128 inches, and wheels 36 x 4½—on enclosed cars 37 x 5—Rayfield carburetor, Warner autometer, ammeter, engine driven power tire pump, Rothschild body with extra wide doors and low, deep seats, full floating rear axle. This car is made, five passenger touring or two passenger roadster at $2250; six passenger at $2300; Sedan five passenger, $3250 and limousine, at $3700.

The best known dealers in the country are wiring for territory on these cars. Most of the big output has already been contracted for. We are anxious not alone to dispose of the output, but to see that every man in every county in the country who appreciates the new standard of high grade value we offer, gets his Jeffery car. Therefore, we will gladly co-operate with you if you will wire right now.

The Thomas B. Jeffery Company

Main Office and Works, Kenosha, Wisconsin

We Buy It By The Box

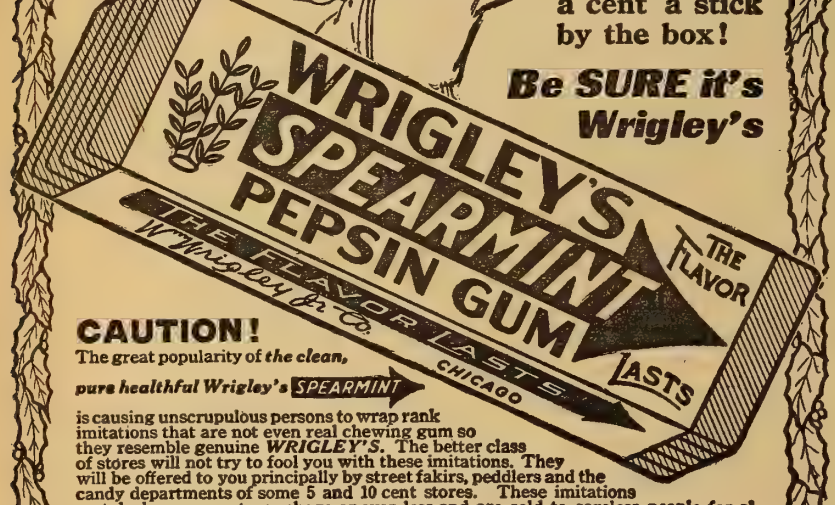
—for Christmas!
—for 85 cents!

The clean, pure, healthful

WRIGLEY'S SPEARMINT

can now be had of most any dealer for *85* cents a box of twenty packages. Get this long-lasting goody that helps digest other goodies. It costs less than a cent a stick by the box!

Be SURE it's Wrigley's



CAUTION!
The great popularity of *the clean, pure healthful Wrigley's* SPEARMINT is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine *WRIGLEY'S.* The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These imitations cost dealers one cent a package or even less and are sold to careless people for almost any price. If you want *Wrigley's* look before you buy. ***Get what you pay for.***

We are inserting the above caution solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were Wrigley's

CURRENT EVENTS

PRESIDENT WILSON'S plan for presidential primaries and a ratifying convention is meeting with the hearty approval not only of the rank and file of the members of his party, but of the leaders as well. Washington dispatches state that members of both houses of congress are enthusiastic over the proposition, while the anticipated opposition from southern democrats (because of the practical enfranchisement of the negro by such procedure) has failed to materialize. One of the strongest endorsements came from Senator Vardaman, of Mississippi, who glories in the reputation of being the most rabid anti-negro member of either house of congress. It is confidently expected that the president's plan will be made a party measure and that little time will be lost in passing the necessary laws. The promulgation of the plan came as a surprise, inasmuch as the president had never openly expressed his views in such a determined manner. The plan provides for direct nomination for president and vice-president and a ratifying convention consisting not of delegates elected for this purpose, but of party candidates, hold-over members of the senate and the presidential nominees, who shall agree upon the platform upon which the campaign is to be fought out. The passage of a primary law by congress is all that is necessary to abolish the old convention system, which has been in existence since the early days of the republic.

THE Mexican congress has nullified the recent farcical presidential election and ordered another one held next July. In the meantime, however, General Huerta is continued in office as provisional president, unless the force of foreign influence becomes too strong or the financial needs too great, when he will step down and out. It will be recalled that the Mexican voters stayed away from the polls at the recent election, inasmuch as Huerta dominated all the precincts and his opponents were afraid to vote. The result was a fiasco. Out of 14,225 voting precincts returns were recei ed from only 407, while the total number of votes cast fell far below the number required by the Mexican constitution to make an election legal. General Huerta declared himself elected, however, and would not have allowed the returns to have been questioned had it not been for the firm stand of President Wilson, who declared to the world that the election was a farce and who promised trouble to Mexico if such a fiasco were given legal credence. With rebel successes in the north of Mexico, the federal army practically bankrupt and the federal troops deserting by the thousands because of no pay for months, the Huerta cause in Mexico is becoming lower every day.

POSSIBLY as a direct result of the Mexican situation, the lower house of congress has passed what is known as the Hay army bill, which puts volunteer forces on an equal footing with the regular army. The bill provides that whenever in the president's judgment war is imminent or actually exists, he may organize volunteer regiments for war purposes. The men instead of enlisting for a short period, as in the past, would enlist for the war. The president would appoint all the officers, not more than four regular officers to be appointed to any one volunteer regiment. The volunteer forces thus named would supplement the existing national guard or militia, with which the bill would not in any manner interfere. In discussing the bill before it was passed Congressman Mann, republican floor leader, declared that it had been made necessary by reason of the Mexican situation and that conditions were analogous with those which existed when congress unanimously put $50,000,000 in President McKinley's hands when the Spanish situation was most critical. Washington dispatches declare that never before have the army and navy been in such good condition or so ready for action on a short notice. The Mexican situation is not as critical as it was a few weeks ago. This government is evidently prepared for any emergency that may arise, however.

SECRETARY HOUSTON, of the department of agriculture, is not convinced that a system of farm-loan banks similar to those in existence in Europe is necessary or even desired in this country. In his annual message, recently submitted to congress, the secretary states that he does not believe that there is need for unique or special legislation, or for legislation which shall aim to give the farmer credit on easier terms than other members of society. What is needed, in his opinion, is the creation of conditions and machinery which shall enable him, on similar credit foundations, to secure money at the same rates as those that prevail for other classes and for other sections. "Even though the problem of how the farmer can best sell his produce and can improve the conditions under which he can secure the necessary capital were solved, there would still remain vital things to be accomplished before rural life can be made fully efficient, profitable, healthful, pleasurable and attractive, and before a larger disposition to remain on the farm develops. Good roads are prerequisite for better marketing, for better schools, and for more comfortable rural living. Better sanitation and hygiene in the home, in the school, and in the community are just as vital for the rural community as for the urban," says the report.

A DELEGATION of woman suffragists, headed by Dr. Anna Howard Shaw, president of the national association, was received by President Wilson, in his private office, during the past week. The suffragists desired one of three things: a special message urging congress to adopt an amendment to the federal constitution, to be submitted to the states, that would give women the right to vote throughout the country; a reference to such a procedure in any special message the president might send; or the use of his influence to obtain the appointment of a standing committee in the lower house to consider the subject as the senate has done. The president heard the suffragists carefully and at the conclusion of the meeting announced that he was favorable to the appointment of the desired committee in the lower house, but that he would neither send the special message desired nor make any reference to the subject in any message, inasmuch as it was his rule not to urge upon congress anything which had not been the subject of "organic consideration" by the democratic party, of which he considered himself the spokesman. In other words, the president will not foist suffrage upon the party, but when it comes to be a party issue he will give his personal views and discuss it as the leader of the party. The suffragist visitors were divided in opinion as to whether the visit was a success or a failure, although if the desired committee is secured in the lower house a step in advance will have been taken. President Wilson was not asked for his personal views on suffrage and did not give them. He is not an ardent enthusiast on the subject, however.

ELIHU ROOT, former secretary of state and now United States senator from New York, has been awarded the annual Nobel peace prize of the value of about $40,000. The award is made because of Senator Root's efforts in the pacification of Cuba and the Philippines and the settlement of the difficulties between the United States and Japan in regard to the public school matter in California. Senator Root is the second American to be thus highly honored, a previous Nobel prize having been awarded Theodore Roosevelt for his efforts in bringing about peace between Russia and Japan.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

HIRED MAN LAW.

Controversies about wages frequently arise between farmers and their hired men when the latter are discharged or quit work before the expiration of the time for which they were employed. Sometimes a man who is hired to do certain specified work, or work for a certain period of time for fixed wages, quits his job without good and sufficient reasons and the question then arises, what compensation, if any, can he recover by law from his employer, for the work he has actually done? There is some conflict of authority in the decisions of the courts upon this subject, but the weight of authority is to the effect that in such case the hired man can recover the value of the services which he actually rendered, deducting from this amount any damages which his employer has sustained by reason of his failure to complete the services which he was hired to perform. Sickness or death of an employe is considered by the law to be the act of God and constitutes good excuse for delay, or even for non-performance of a contract for personal services. An employe who is prevented by sickness from completing services according to his contract can recover the actual value of the services which he has performed under the contract and if the completion of his work is prevented by his death his executor or administrator can recover the value of the services actually performed by him.

Where a minor is employed to work and quits his job before his contract of employment expires he can, nevertheless, recover full wages for the time he actually worked, without any deductions, although his failure to fully perform his contract is without sufficient excuse. This doctrine is based upon the ground that a minor is legally incapable of making a binding contract, and may repudiate the same at any time.

Where a hired man is discharged for good reasons before the expiration of the time for which he was employed, there is also conflict of authority as to his right to recover wages. Some courts hold that he cannot recover unpaid wages up to the time of his discharge. The general rule, however, seems to be that he can recover the value of the services he has actually performed, deducting therefrom the damages caused by the conduct which was the cause of his discharge. This doctrine places the employer on the same level with the hired man who quits his job without cause. Where a hired man is discharged before the expiration of the time agreed upon, without good and sufficient reasons, his employer is liable to him for breach of contract and the hired man can recover his wages for the entire time by the contract, subject, however, to this qualification, viz:—if the employer can show that the hired man, after he was discharged and during the time covered by the contract, actually earned or received money from others for his services, or that during said time, he might have earned money from others for his services, or that during said time, he might have earned money in a business or vocation of similar character, then the amount of such actual or possible earnings would be deducted from his claim against his employer.

Where a hired man refuses to continue work according to his contract, a court will not specifically enforce such contract on behalf of the employer. The reason of this rule is based upon the physical impossibility of enforcing such an order or decree.

LAW QUESTIONS CONSIDERED.

CANCELING OIL AND GAS LEASE.

Mr. H. J. G., Newkirk, Okla.—A leased a certain tract of land to B, for the purpose of boring for oil and gas. The lease is dated June 15, 1913, and to remain in force for two years, or so long as oil or gas is produced in paying quantities. The lease provides that B must begin operations within sixty days, and complete a well in six months, and at the expiration of the six months, shall pay A one dollar per acre, per year. B did not begin operations within sixty days, and did not complete a well within six months, and has paid A no money, and has made no move whatever to comply with the lease, which has been recorded. B refuses to cancel the lease or release it. (1) Can A lease the land to C, without obtaining release of B's lease? (2) What steps should A take to get B's lease taken from the record?

Answer.—(1) He cannot. (2) A should bring an action in court to have the lease canceled and set aside on the ground that B has failed to comply with its terms and conditions. After obtaining a decree canceling the lease, A may lease the land to any one.

HOMESTEAD AND DOWER.

A Subscriber, Keithsburg, Ill.—Under the laws of Illinois can a husband be deprived of his homestead and dower rights, by the will or deed of his wife?

Answer.—He cannot. Where either husband or wife wills all his or her property away, leaving none to the other, such other may renounce the provisions of the will and claim what the law of the state provides in such case. The law of Illinois allows a husband or wife the homestead so long as he or she shall occupy the same, and dower in the real estate of the deceased.

HORSE DEAL DAMAGES.

A Subscriber, South English, Iowa.—A traded a mare and $25 in cash to B, for two horses, B did not misrepresent his horses, but A guaranteed his mare to be sound, and she was unsound, by reason of which B was damaged to the extent of seventy-five or one hundred dollars. There was no witness to the trade. Can B recover damages from A and if so how shall he proceed to do so?

Answer.—B can sue A for damages for the misrepresentation of the condition of the mare, and recover judgment for whatever amount he can prove—the difference between what the mare is actually worth and what she would have been worth had she been as represented. B's difficulty will be in making the proof in court, there being no witnesses except the two parties to the deal—one man's word against the other.

HOG TIGHT FENCE IN KANSAS.

A Subscriber, Erie, Kansas.—A and B own adjoining farms in Kansas, A has made his part of the partition fence hog tight, by twenty-six-inch hog wire, and three barbed wires on top, can he compel B to make his part hog tight and if so how will he proceed?

Answer.—He cannot do so. The law of Kansas prescribes seven or eight kinds of partition fences, each one of which is declared to be a lawful fence and probably not any of them will turn hogs. See Chapter 41, General Statutes of Kansas, 1909, page 842. But, general section, 3756, same chapter, page 847 provides that when an owner of land desires to have any part of a partition fence constructed or maintained by an adjoining owner made hog tight, he may attach to the same in a secure and workmanlike manner woven wire at least two feet high, so as to prevent hogs from getting through.

WATERWORKS—PETITION—VOTE.

A Taxpayer, Carson, Iowa.—(1) In getting up a petition to vote for waterworks, what per cent of the voters at the previous municipal election is required to sign the petition? (2) In order to establish waterworks, the law requires a majority of legal electors voting thereon, to vote in favor of the same, at a general or city election, or at one specially called for that purpose.—or the mayor shall submit such question to such vote upon the petition of twenty-five property owners of each ward in the city, or fifty property owners of any incorporated town. Women are allowed to vote at election for waterworks, but not at a general election. In counting a majority on waterworks question, are women votes included?

Answer.—(1) No per cent at all; but twenty-five property owners in each ward of a city or fifty property owners in an incorporated town, as stated in second question above. (2) Whether the question of waterworks be submitted at a general or city election, or a special election, women can vote on such question, and their votes must be counted in determining a majority for waterworks.

FORECLOSURE OF MORTGAGE—DEFICIENCY.

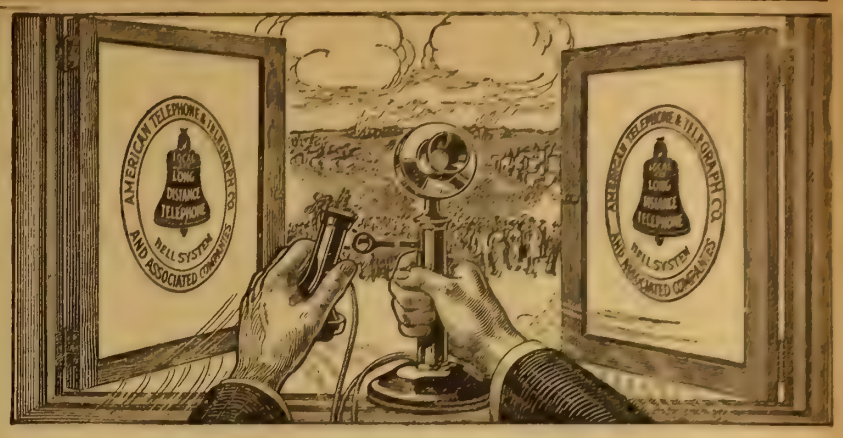
A Subscriber, Friend, Neb.—A mortgaged his farm in South Dakota to B, for five years. A has failed to pay interest and taxes. (1) Can B foreclose the mortgage before the expiration of the five years,, (2) In case the mortgage should be foreclosed and the land sold, and not being enough to pay off the mortgage debt, could B get judgment for the deficiency? (3) Could A avoid the liability by moving across the line to another state?

Answer.—(1) It depends entirely upon the terms of the mortgage. If the mortgage provides that foreclosure can be made upon failure to pay taxes or interest, then it can be done. (2) If the land is sold on foreclosure, of the mortgage and the proceeds are not sufficient to pay the debt, B can obtain judgment for such deficiency. (3) A cannot avoid legal liability by moving to another state.

TIGHT PARTITION FENCE.

Mr. A. C. Woodard, Decatur City, Iowa.—I never use my land for hogs or sheep, but my neighbor who owns adjoining land says that the law requires me to make my part of the partition fence hog tight. What is the law of Iowa on the subject?

Answer.—The law provides that all partition fences may be made tight by the party desiring it and when his portion is so completed and securely fastened to good substantial posts, set firmly in the ground not more than twenty feet apart, the adjoining property owner shall construct his portion in a like manner. Therefore, if your neighbor has made his part of the partition fence hog tight, he can compel you to do likewise, even though you do not use your land for hogs or sheep.



The Telephone Doors of the Nation

WHEN you lift the Bell Telephone receiver from the hook, the doors of the nation open for you.

Wherever you may be, a multitude is within reach of your voice. As easily as you talk across the room, you can send your thoughts and words, through the open doors of Bell Service, into near-by and far-off states and communities.

At any hour of the day or night, you can talk instantly, directly with whom you choose, one mile, or a hundred, or two thousand miles away.

This is possible because 7,500,000 telephones, in every part of our country, are connected and work together in the Bell System to promote the interests of the people within the community and beyond its limits.

It is the duty of the Bell System to make its service universal, giving to everyone the same privilege of talking anywhere at any time.

Because as the facilities for direct communication are extended, the people of our country are drawn closer together, and national welfare and contentment are promoted.

CORN-BELT BEEF PRODUCERS

A Meeting of Great Interest—Vital Subjects Discussed by Representative Farmers and Beef Producers—The Future of the Cattle Business

AN EXCELLENT program was carried out last week by the Corn-Belt Meat Producers' Association in its annual meeting held in Des Moines. Although the gathering was not so large as has been the case in former years, yet much enthusiasm was shown over the future usefulness of the organization.

President Sykes' Annual Address.

In his annual address President A. Sykes called attention to the fact that the association has had a quiet year. At the beginning of the year considerable time was spent by the executive committee before the Iowa house and senate and something was accomplished in the way of safeguarding the interests of Iowa stockmen. President Sykes called attention to the representation of the association before the finance committee of the United States senate when that committee was considering the Underwood bill. This bill was deemed unfair to the farmer and stockman, hence the advisability of making some effort to defeat that part of it which was of special interest to stockmen. While for a time it seemed as if this committee had accomplished something in the way of bringing about only a reduction of the present tariff on livestock, dressed meats and agricultural products, yet the sentiment in the East became so strong in favor of placing these commodities on the free list that the president finally yielded to this demand. The Corn-Belt Meat Producers' Association, however, through this committee has placed itself on record as opposing the placing of these commodities on the free list. As it now stands President Sykes considers the bill illogical, as it discriminates against the agricultural and livestock interests.

During the year an effort was made by the officers of the association to improve shipping facilities for sheep. It was found that the Iowa commission and likewise that the interstate commerce commission lacked power to require railroads to install such facilities. The matter was then taken up with the superintendents of the different lines and some of the roads as the result of this agitation have installed double-deck chutes. President Sykes called attention to the fact that a 75-per-cent rate on stocker and feeder cattle and on sheep is now in force, although many stockmen are paying full rates on account of not being familiar with this ruling. The owner, if he obtains the benefit of this cut in freight, may be required to sign a statement to the effect that none of the shipment is intended for immediate slaughter. Efforts to improve caboose accommodations for stockmen has met with some degree of success, although it has been worked out entirely through superintendents of transportation, as nothing could be accomplished either by the state railroad commission or interstate commerce commission. An effort has been made by the association to bring about the enactment of a federal statute compelling railroads to pay for the actual value of all animals killed in transit instead of the amount specified in the contract, namely, for horses and mules, $100; steers, $50; cows, $30; swine, $10, and sheep, $3. The bill is in the hands of Senator Cummins and is intended to prevent common carriers from limiting their liability by contract.

Feeding Texas Calves.

Mr. James Brockway, of Letts, Iowa, presented some interesting data on the above subject. He first called attention to the fact that in recent years cattle feeding has become more and more a matter of speculation, the feeder not being able to determine in advance whether he will make a profit or suffer a loss. Of late years the price of feeders and especially of heavy feeders has been so near the price of the finished animal as to make the profit very small or to wipe it out altogether. "This element of speculation must be eliminated in the future. There are certain factors in the meat-making business that are almost fixed, namely, high-priced labor and high-priced feed. In every manufacturing business there comes a time when the margin of profits grows narrower and the waste products must be utilized. There was a time when every cotton gin had its pile of decomposing cotton seed, and the linseed oil manufacturer did not know what to do with the oil cake. In an early day the backbones and ribs of hogs slaughtered at an eastern Iowa packing plant were hauled out and dumped on the ice of the Mississippi river. As a small boy I can remember how the fishing in the Iowa river was for a time spoiled because a glucose factory 140 miles up stream had dumped its waste products in the river. These same by-products are now a substantial source of the revenues of these industries. There are today just as great wastes going on upon the corn-belt farm as any of those just mentioned. For years we farmers have been wasting 40 per cent of the corn crop. Not many manufacturing concerns could stand that per cent of loss. The problem before the corn-belt feeder today is to use this by-product.

"Beefmaking will become more and more a matter of production. We must learn to feed more roughness and less corn; a well-balanced ration, but not a ration wastefully rich in grain. We are now and we will be forced to make beef on a narrower margin of profit and it is up to us to utilize our by-products. I believe that they can best be used by developing a calf into a first-class baby beef.

"But where is the raw material to come from? Probably the way would be to raise the calves that you expect to feed. But the average farmer can not well do this. If one tries to pick them up at home or if one goes to the market for them they will nearly always be found to be a very miscellaneous lot and with no similarity of breeding. Many times a calf will look well enough and yet that same calf will be from a cold-blooded old skate of a cow, and it's a sure thing that the longer you keep that calf the more he will come to look like the cow. For that reason it is very important that the feeder know what kind of breeding is back of his calves.

"For a number of years we have been going to the great ranges of Texas to buy our feeding calves. Nearly all the Texas herds are well bred now. Most of them are Herefords. It is not at all difficult to buy calves that show the very best of breeding. Today the ranchman shows a willingness to sell his calves at weaning time. But by the first of September he is making up his mind as to what he will do with his calf crop. If he is to carry them over he must be making the necessary arrangements for feed and grass. If he decides to sell them that is the time he is looking for a buyer's name on a contract. The feeder who goes to the range should be there by September at the latest. Contracts are usually made for October or November deliveries. About November first is the usual time. Of course, calves can be bought at this time, but the price is invariably higher and the price of those offered for sale is not so good. Calves bought on the range when landed in the feed lots will usually cost just about the same or a little more than calves bought at the Missouri river markets. But the quality and the breeding are much better. In most of the Texas herds a certain line breeding exists. The calf's mother, grandmother and great-grandmother probably all wore the same brand, and when the calves are fed out they will develop and will look alike. Buy as big a calf as you can, the bigger and stronger the calf the better he will winter, and, of course, get the best quality that you can. A dollar or two on the calf may mean ten when he goes to market. If you can, go to the range for the calves yourself; if you can't do this, give an order to some responsible party who does go. There are plenty of reliable feeders who buy calves on the range every year. If there is no other way give an order to your commission firm and have him watch for a bunch of calves all from the same herd. In this case you have the disadvantage of knowing nothing about the cows and bulls that the calves are from. If I could be assured that the condition and size of the calves are right I would give more to see the cows and the bulls than to see the calves themselves.

"From Texas to Iowa is a long trip on a stock train. It will usually require about five days, and the calves taken from their mothers will neither eat nor drink much at the feeding stations and will reach home mighty tired and hungry. A good pasture with plenty of water is a fine place for them to rest up, but they will need a stronger feed than this, and if left on the grass will begin to shrink at once. We have also had good success putting them directly into the feed lots.

"Corn silage is the basis of our ration and this is the feed that makes cheap gains possible. As long as they are in the feed lots they are given all of this that they will eat. They will relish some dry feed with the silage and we usually feed some corn fodder or straw. For the first month or so we feed only corn fodder, silage and cotton-seed meal—about a pound or a pound and a quarter per head a day of the meal. Don't fail to provide this or some other high protein feed to balance this excessive corn ration. Clover or alfalfa hay would give a better variety, but I doubt if they could make any cheaper gains.

"About the first of the year we begin feeding five or six pounds of crushed corn per day. Be sure that they are eating all the silage that they will clean up, for remember it is the surplus food that the animal eats that makes the gains. It is the assimilated food that is not needed by our calf to keep up animal heat and growth that is laid away in the fat that makes the finish. As our ration is not a rich ration it is highly important that the calf gets all that he can use of it.

"The above ration is continued on the heifers, which are fed in separate yards until they go to market, which is any time from May until July. We prefer not to put the heifers on grass at all. The steers will do more growing than the heifers. The amount of gain will be practically the same, but the heifers will obtain that finish or fat covering wanted by the butcher at an earlier age than the steer will. The steers are put on grass as soon as the ground in the pastures has settled in the spring, and the same silage and grain ration is continued. As the grass improves, the silage may be decreased until by the time grass is good the silage is discontinued. At the same time that the silage ration is decreased the grain ration is raised, so that by the time the silage is discontinued the grain is practically doubled. About ten or twelve pounds of corn on good pasture is all we feed until five or six weeks before marketing. Then we give them all the corn they will eat. Cotton-seed meal may be gradually decreased and finally discontinued after going on grass.

"The most critical period of feeding is this time of going from silage to grass. Professor Curtiss has often told us that any changing period is a losing period. Therefore it is essential that we make as radical a change as this very slowly, and without sudden changing of the ration. Remember that silage is ever so much better and stronger feed than the soft new grass. One has all the sunshine of a long summer stored up in it and the other has only that of a few soft, warm days. Be sure to let the silage lap well over a period of feeding on the grass.

"Our feeding equipment and methods are very simple. We have only sheds with dirt floors for shelter. About one-third of the south side is open for doors. All shock corn and straw are fed in racks inside the sheds and the waste stalks will keep the shed bedded. Plenty of clean water protected from heavy freezing is also inside the sheds. For fifty feet in front of the sheds and running their entire length is a concrete feeding floor and a concrete driveway extends to the silos that stand at the end of each shed. The silage, corn and cotton-seed meal are fed in bunks twelve inches deep that set on the feeding floor. The lots and sheds are subdivided so as not to allow too many calves together and make it possible to divide them according to size so that the stronger calves will not rob the smaller ones. We feed silage, corn fodder and cotton-seed meal in the morning, another feed of silage after dinner and the small feed of corn just before night. Much better results are had by making the feed of grain at night both on grass and with silage. If fed at this time it is retained longer by the animal and I believe that it is digested better. If the grain is fed in the morning and the coarse feed fed later there is a tendency for the corn to be crowded through the animal and not thoroughly digested. Feeding the corn at this time of the day is to our calf like bringing on the plum pudding after a turkey dinner; it is really not needed so far as the appetite is concerned, but nevertheless it is highly appreciated. Feeding corn at this time of the day insures that the animal is eating the surplus feed that will produce the quick gains and finish.

"I do not advocate the feeding of Texas calves as a get-rich-quick scheme. I do recommend it as a means of marketing the produce of an Iowa farm. When big cattle are making money, as they do sometimes, they may do better than the calves, but one year with another, I believe that baby

(Continued on page 14.)

New JAMES 2-in-1 Carrier
For both Rigid and Rod Track

You stand at the barn door and give the carrier a shove. It runs out, dumps automatically at the point desired and returns automatically to the barn. Dumps every time—never fails to trip—saves walking through the wet yard—saves digging paths through snow.

JAMES CARRIERS
Mean Clean Barns—Less Work—More Profits

James "Mascot" and "Big Boy" run on Celebrated James I-beam track—the *rigid*, long wearing, trouble-proof track, easily curved without heating, quickly erected with "button-on" hangers.

James "Chore Boy" runs only on rod track—easily put up, strong, simple.

James "2-in-1" now combines the good features of the rigid and the rod track. Carrier runs smoothly from one track to the other at the barn door.

Write us today for full particulars about this new carrier and other James Carriers, Feed Trucks, Feed Carriers, also James Stalls, Stanchions, Pens and Ventilators.

JAMES MANUFACTURING CO.

Let a Galloway Engine Help Solve the Labor Problem on Your Farm

Try One on Your Farm 30 Days at My Risk

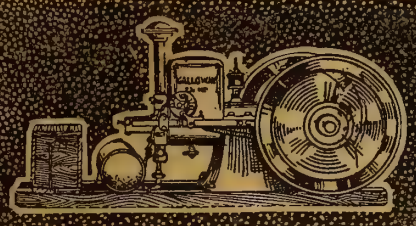
Fill in Coupon Below and Mail for My New Catalog Now

That's the best way to prove the merit of any machine. A test under actual working conditions on your own farm. That's the offer I make you on any of my engines. It's a test they have stood for years and over 30,000 Galloway customers will tell you they've made good. Listen. You and I know that the great problem on the farm today is the labor problem. It's the manufacturer's problem, too. Now, the way a manufacturer solves it is by installing up-to-date, modern machinery that will do the work of several men and in that way it's easier to get good labor. That's the only way you can solve it on the farm, by installing machines that will save a lot of time, labor and hard work, which you now do by hand or have to hire done. Isn't that a fact? All right, then you want a gasoline engine now.

It will come the nearest to solving the labor problem for you of any machine you can buy. It will pump water, grind feed, saw wood, run the shredder, silo filler, sheller, washing machine, churn, and nearly every machine you have on the farm. It saves you time for other work. You simply can't afford to be without one. They are the cheapest help you can buy. And you want to buy the best engine that you can find on the market selling at the lowest price. That means the Galloway. No one can compete with me in price and quality, the great combination that has made my business the big success it is today. Just notice my different styles and sizes of engines shown on this page with my new, low, direct-from-factory prices. Select the engine that fits your requirements best and send for one on trial. You take no risk whatever. My engines are sold backed by a $25,000 bond. They must give you satisfaction or you can return them and I will refund your money and pay all the freight.

But I know they will please you as they are high quality engines, backed by a five year written guarantee in "black and white" on materials. Give the Galloway a thirty days' trial on your farm at my risk. Send for my catalog giving all the facts. Don't buy an engine of any style or make until you have first tried the Galloway.

Here! Select the Engine You Want for Your Work--Buy It at My New Low Direct-From-Factory Price.



Light Duty and Pumping Engines

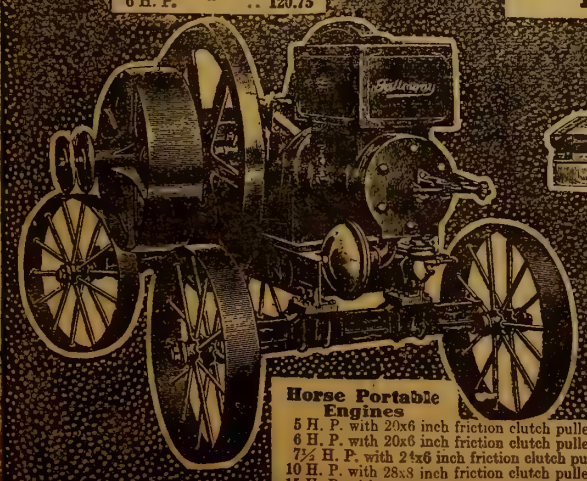
1¼ H. P. air cooled	$26.75
1¾ H. P. water cooled	34.75
2¼ H. P. water cooled	39.50
Small Portables $31.75, $39.75, $45.50, respectively	
Complete 2¼ H. P. Pumping outfit	44.95

Stationary Engines

3 H. P. 8x4 inch pulley	$ 74.50
5 H. P. 16x6 inch pulley	99.50
6 H. P. 16x6 inch pulley	109.75
7½ H. P. 20x6 inch pulley	179.50
10 H. P. 24x8 inch pulley	247.50
15 H. P. 28x8 inch pulley	342.50

Hand Portable Engines

3 H. P. Complete	$ 84.50
5 H. P. "	110.50
6 H. P. "	120.75



Horse Portable Engines

5 H. P. with 20x6 inch friction clutch pulley	$142.50
6 H. P. with 20x6 inch friction clutch pulley	152.75
7½ H. P. with 24x6 inch friction clutch pulley	244.50
10 H. P. with 28x8 inch friction clutch pulley	329.50
15 H. P. with 32x8 inch friction clutch pulley	432.50

Buy a Galloway on My Direct-From-Factory-to-Farm Plan and Save $50 to $300

Keep your money at home by buying your machines at my direct-from-factory, money-saving prices. I am saving you and the other business farmers of America over a million dollars a year. My large volume and direct-from-factory, one-profit plan of selling make my low prices possible. You have no middlemen's profits to pay; no salesmen's expenses or dealers' bad debts are tacked onto the prices of my machines. When you buy on my plan you pay only one small manufacturer's profit in addition to the actual cost of materials and labor that enter into the construction of my machines. Try my plan. Save $50 to $300 right at the start on the best gasoline engine made for your work. Galloway engines are designed especially for farm work. They are easy to start, easy to operate and the most economical engines made. They are built of the very best materials in our own modern factory by skilled mechanics. They will make good for you every time.

Complete Line of Farm Engines

Our line is complete with just the style and size engine you want for your power requirements. Light Duty and Pumping Engines for running the washing machine, churn, cream separator, pump or any other small machine on the farm. Stationary Engines 3 to 15 H. P. for equipping a power plant. Hand Portable Engines 3, 5, and 6 H. P. for running any of the medium size machines no matter where located. Horse Portable Engines 5, 6, 7½, 10 and 15 H. P. for running the heavier machines and the best equipment you can buy for doing "job work." Saw rigs, 5, 6, 7½ and 10 H. P. You can't find a more complete line of engines on the market for doing farm work. And don't forget that I can supply you at money-saving prices with a complete line of machinery such as shellers, grinders, shredders, pumps, washing machines, cream separators to be run by power. Select the engine you want and send me your trial order.

FREE Service Department

My big corps of experienced engine experts are at your service. They will help you choose the best size and style engines for your work. They will help you in equipping your power plant. They will tell you the size pulleys to use—line shafting, hangers, belting, etc., and we can supply you with this equipment at very low prices. My service department, in other words, will help you to get the most and best possible service out of the engines you buy of us. This service does not cost you one cent. It's absolutely free. It will save you a good many dollars in time and money. No other concern makes you this unequaled offer. It's only another good reason for your buying your engine of Galloway. Get my catalog today. Write my Service Department and give them your plans, and sizes and style of machines you want to run by power—they will do the rest.

Write Today for My Engine Catalog and Special Offer

Remember, my catalogs are my **Only Salesmen.** They are the cheapest and the best salesmen on earth, for it costs less than one-third the price of a salesman's ten cent cigar to put one right in your mail box. Get my catalogs, that's the first step. They will show you my complete line of engines and explain my simple, direct-from-factory, money-saving plan of selling. My Big Engine Book shows my complete line. My New Pumping Engine Book shows my Light Duty and Pumping Engines 1¾ and 2¼ H. P. with a lot of Combination Outfits selling at special combination prices. Get the catalog you want. I will send it free postage prepaid. You are under no obligation to buy. Then as a clincher I am going to make you the most liberal co-operative, profit-sharing offer you ever heard of. My offer, if you accept it, will help you get your engine partly or entirely without cost to you in the end. No canvassing, no soliciting, just a straight business proposition. Write me for my catalog and special offer today. Do it before you lay this paper down Address

"Look Beyond the End of Your Nose"

grandfather used to say. A big Florida fruit grower remarked that he had to go to California to learn that he had been wrong for twenty years. The potato growers of Maine get hints from Colorado; the apple men learn from the orange growers how to coöperate. Here's where the national-farm-weekly idea comes in. If you want to travel north, east, south, west and get your long-distance lessons in money-making methods without spending carfare, look beyond the end of your nose and get the national-farm-weekly habit. The big National Farm Paper is *The Country Gentleman.*

WE BRING THE BEST FARMS TO YOU. If you had the money and time wouldn't it help your farm if you traveled about the country, looking at the best farms of their kind in the United States? We propose not only to bring the best farms to you, but to bring to you the MEN behind the best farms; let them tell you the secret of their success, which is more worth while than merely looking at the farms. The Best Farms I Know is a series of articles written by men who do know. This one series alone is worth more than the $1.50 (less than three cents a week) you pay for *The Country Gentleman.*

TEN DOLLARS MINUS ONE DOLLAR FIFTY EQUALS WHAT? Service. One of our editors said the other day, "Here's a check for $1.50 for a year's subscription accompanied by a technical question that will cost us ten dollars for an expert to answer. Where do we get off?" The answer was easy: We don't get off; *we get on.* And that's why we're getting on. Service. Our three hundred thousand weekly circulation from a little more than nothing two and a half years ago shows that we are getting on. It's service. Nearly three-score experts are at our call to answer any question you may ask us about your business of farming. It's free, in *The Country Gentleman.*

NOTHING SUCCEEDS LIKE FAILURE if you have wit enough to escape the other fellow's pitfalls. We're one of the few farm papers that publish failures—in livestock, poultry, fruits, field crops, farm finance—or lack of finance. We don't publish hard-luck stories; just failures, with reasons why. Failures show you the road to success. They're in *The Country Gentleman.*

THE FARMER'S WIFE IS THE MAINSPRING OF THE FARM. And we'll never let that mainspring run down for want of new ideas. Clothes, cooking, crocheting, clubs—they're all wound right up to the minute. And the pin-money suggestions—chickens, eggs, bees, flowers—are timed to the season of every woman's needs. You'll lighten your labors if you read the woman's department in *The Country Gentleman.*

Everything about the BUSINESS of farming you will find in THE COUNTRY GENTLEMAN, the national farm weekly. Five cents the copy, of all newsdealers; $1.50 the year, by mail.

Independence Square Philadelphia, Penna.

CORN-BELT BEEF PRODUCERS.

(Continued from page 12.)

beef is a surer proposition. One is not so likely to find the lean years that come so often to the feeders of heavy cattle. With this manner of feeding we have not found it difficult to make 350 to 400-pound calves 700 to 800 by July and by September the steers go better than 900. In six or seven months we make them double their weight and make as much gain per head as some feeders get on heavy cattle in that time.

"As long as the Texas calf can be bought at a price that is less than it would cost to produce that same calf on our good Iowa land I believe that it will pay to go to Texas after him. If he costs much above that price we have the same element of speculation that we have now in feeding the big cattle, and in this case each man must use his own judgment. I believe that the time is rapidly approaching when we will raise more good beef calves in the corn belt. I realize that every one cannot feed calves, nor should they, and I may well add nor will they. I do not know of any country where a calf can be produced cheaper than in Texas and I do not know of any country where that calf can be developed better than in the corn belt."

Cattle Feeding for Profit.

Capt. W. H. A. Smith, of Sioux City, one of the most successful feeders in the corn belt, discussed the above subject in a most interesting way. According to Captain Smith in cattle feeding and cattle production we have first "the man who feeds for glory, second, the man who feeds for money, and third, the man who feeds for neither glory nor money. I am interested only in the second man. No man can make a success of any business unless he has a certain goal he is working for, and farming does not differ from any other business in this respect. My one idea all the time is to build up the farm and in feeding cattle I do not figure on the $2.00 advance I hope to get, but on the four tons extra silage and the one ton extra of alfalfa I am sure to get, for the larger the crops are, the smaller the margin necessary to enable me to market my crops at a profit and this is my goal, economy of production. I learned long ago that the sure profit from a farm was in utilizing the waste and that cattle feeding was one way of doing this. We have, in my part of the country, dozens of men, smart commission and cattle dealers, who have tried to feed cattle, arguing that they were better judges than the average farmer, that they could buy and sell their cattle cheaper and yet they all, without exception, eventually peter out. Why? Because they figure on making a profit above the market price of grain, feed and labor, whereas, I figure on selling at the market price and my extra profit comes in producing larger crops from the manure. If, therefore, you start out with this idea firmly worked out in your mind, the idea that you feed cattle, not to make big gains, but to utilize the waste, a success is bound to follow if you go at things in a businesslike manner. But to utilize this waste you must have an outfit or tools to work with.

"There are some things any farmer is justified in going in debt for and I put first, make the farm, hog and sheep tight, then get a silo and grow alfalfa or clover. These three things are absolutely essential in the economical production of beef, pork or mutton. Take first the fence; I had been for years very much dissatisfied with the dreadful waste of liquid manure through the rains and the dreadful state of my feed yards in spring. Last spring we had lots of rain and my cattle for weeks did not have a dry spot to lie down on and made a miserable gain. I made up my mind then that a change was due. Why should cattle be confined in a small feed yard for six to eight months and I have to haul out all the manure with 50 per cent wasted through rain? How does it figure out on an interest basis? It takes a round $250 to make a quarter section hog tight, even allowing 12 per cent interest on the fence; this means $30 a year. Could I make that fence pay good interest? During the month of November, I had 250 head of two-year-old steers and 240 hogs fed fodder on 15 acres; on December 15th I will move the cattle on another fifteen acres. These cattle are on feed and are fed their grain and oil meal in the feed yard in the morning then turned out on the fifteen acres with fodder until four p. m., at which time they drift back to the feed yard and find sheaf oats waiting them in the racks. Sixty-seven lambs left $110 for the waste they picked up. Twenty old brood sows have been living on the alfalfa and around the alfalfa stacks. Since September, 220 hogs cleaned up ten acres of corn and cleaned up all the ground from which the silo had been filled. Did the fence around that quarter pay interest this year? Why, it will pay cost twice over. This is what the fence is doing in the fall and winter. What do you suppose it paid this summer when the hogs ran on the alfalfa?

"I spent twenty years of my life at sea and had command of a ship twelve years and many a man asks me how on earth a man brought up at sea can take to farming and yet, when you think of it, how much of my sea life is useful or the farm. In the days of sailing ships we were out of sight of land four months and we had a certain allowance of provisions to last us the trip. No running around to the corner grocery if we ran short; we had to make ends meet and so there was no guesswork. It taught us to use the scales. For weeks before we arrived off port, I would figure for every possible emergency that might arise, for, although a large sailing ship is all right in the open sea, she is a ticklish proposition in narrow waters. I would figure on being caught on a lee shore with a gale of wind, being becalmed by head winds and dirty weather. I learned to figure before a thing happened and not after. We learned at sea how to handle men. We figure a man hired for labor furnishes labor, but not brains, so we do not make the mistake so many Iowa farmers make in thinking they can hire labor and brains for $30 a month. The boss must furnish the brains. We learned that it took 400 tons of coal to make a steamship go twenty miles an hour, but it took 600 tons to make her go twenty-one. In other words whenever you work under forced draft it costs too much money. The same will apply to cattle feeding, for whenever a man attempts to put two and one-half to three pounds per day on a steer, he is working the steer under forced draft and the last one-half pound gain eats up all the profit. We have to get just as far away as we can from feeding for speculation and big gains. The one idea should be in feeding cattle to utilize what is now practically waste to make beef from fodder, straw, silage, common stacks and simply add to these enough corn, clover, alfalfa or oil meal to make a balanced ration. This does not mean a big daily gain on cattle but an economical gain. Many of our agricultural papers are lamentably weak on the advice they give correspondents who write them on how to feed 1,000-pound steers. They invariably talk about feeding eighteen to twenty pounds of corn per day and about two and one-half to three pounds gain per day on a steer, entirely overlooking the fact that a class of men who write them for advice are mostly men who have never fed before and that this class of men should not be advised to make beef from corn with a little hay or roughness, but from roughness with a little corn or oil meal added, simply selling his crops and reducing his speculation, and, above all things, the cattle should be sold every time there is a profit, irrespective of whether they are fat or not.

"Keep in front of you all the time the idea that you do not want to speculate, you want to sell your crop at market price or better and from the manure raise a little larger crop next year. Play the game as a business and if you decide to do so, put a little study into it. This is an age of specialists and although there is just as much money made in feeding common cattle, provided they are bought as common cattle as there is in good cattle, you cannot do both. Take up one or the other and stay by it; every year will add to your knowledge. Notice I am talking about feeding common cattle, not raising them.

"There is a great deal of discussion at present as to whether it will pay to keep cows to raise calves on high-

priced land and I am not yet quite satisfied that it will pay to do so in quantities, but I know that there are thousands of farms in Iowa today where two or three cows on each farm could be kept from what is now absolute waste and that with a good community bull calves would, at fifteen months of age, leave a handsome profit. All our good breeds of cattle today come from certain communities staying by certain cattle. This is the history of Angus, Hereford, Jersey, etc. Here in Iowa at present, the types, breed and quality of cattle are, to say the least, mixed and it stands to reason that if a certain type of cattle were raised in a certain locality, farmers would never lack for buyers."

Modern Methods of Beef Production.

Prof. W. H. Pew, of the animal husbandry department of the Iowa Agricultural College, gave some facts and figures to show a shortage of beef, not only in the United States, but throughout the beef-producing countries of the world. There has been, for example, a decrease of nearly 60 per cent in the number of breeding beef cattle in the cattle-producing states west of the Mississippi river during the last twelve years. The population of the United States between two census dates increased 25 per cent, while the number of beef cattle decreased 30 per cent. In Iowa alone the decrease of population was 1 per cent, while the decrease in the number of beef cattle was 30 per cent. Professor Pew called special attention to the demonstration at the recent International which showed clearly the supremacy of baby beeves. Not only was the grand champion premium won by a yearling, but this supremacy was duplicated by every load of yearlings that had been well cared for. In this connection it should be remembered that younger cattle make more economic gains than the older cattle. This has been demonstrated over and over again in various feeding tests.

"The International Livestock Exposition has always stood as an educator for the beef cattleman," said Professor Pew. "Some of the lessons they should have learned from the performance of the 'baby beeves' might be summed up as follows: The finished yearling steer is, as mentioned above, the most profitable for the grower and feeder; second, that good blood is necessary for the greatest profit. A good steer can seldom be grown out of a poor calf; third, in order to be profitable a calf must be properly handled from birth; fourth, early-maturing qualities are absolutely necessary for the best results.

"For one to stand on the block and watch the yearling cattle sell, either prize winners or not, for prices from 2 cents to 3 cents per pound in advance of those brought by the heavier two and three-year-old cattle was sufficient proof that some of the older cattle might be well left out of the exposition premium list. I believe it has been proposed that the class for three-year-old cattle be dropped. There seems to be a very good reason for this. I dare say that every pound of gain put on these heavier cattle was done at considerable loss, while, on the other hand, the gains made by the younger cattle were no doubt profitable. I know of some loads of yearling cattle that did not pass the inspection of the 'sifting committee' which made gains for a period of nearly one year at a cost of 7½ cents to 8 cents per pound. Fairly accurate figures have been kept on their cost of gains.

"If our expositions are to remain as educational as they have in the past, I am convinced of the fact that two-year-old cattle might well be left from the single-steer prize list. No doubt some may argue that the steer herd would not look just right without the two year old, but I am looking at it strictly from the standpoint of an educational feature to the farmer and the breeder from the standpoint of profit. As perhaps most of you know, a two-year-old steer may be at least thirty-five months of age at the time of the International and at no time during the state fair season could he be more than four months younger. This means then that the two-year-old steer has been carried from the age of a junior yearling to a junior two year old. His most economical period of growth and gain was made up to the time he was a junior yearling. During the growth and gain of his two-year-old form, he, in most cases, made his gains at a loss."

The Care of the Breeding Herd.

"If 'baby beeves' are to be put onto the market at the earliest possible date they must have had their mother's milk up to weaning time. In order that this may be properly accomplished the mothers must have been properly fed and cared for. This is a big item in actual cost of production of the calf up to market time. Some men have figured that the cow can be maintained for the year on something like $20.00. If she has been maintained for this amount we will all agree that she has been very economically kept. I would rather place the cost of keep at $30.00 per year, or slightly above, this to include all items in connection with the cost of her keep. By the use of corn silage and some roughage throughout the winter season the cost of maintenance of the cow may be considerably reduced below the cost of keeping her under ordinary conditions. By this I mean her maintenance on high-priced hay and other feeds. At the college farm last year the cows were maintained throughout the winter time without grain on corn silage with a very small amount of other roughage. Some of these cows were suckling their own calves and some of them were dry. However, the cows that brought calves in the spring had strong ones, as the crop of last spring shows. As a matter of fact all of the cows went through the winter in very good condition at a cost very much less than had silage not been available. The same is being done again this winter. No producer of baby beef can do it entirely successful without the use of a silo or two."

Conditions as Seen in the Market.

Mr. C. O. Robinson, of Chicago, in discussing market conditions, called attention to the change that has taken place in the public taste during recent years as indicated by the kind of meat in demand. The big steer has actually gone begging during the last few weeks, a good illustration of this being found during the week of the International when well-finished, 1,900-pound steers sold for $8.40, whereas prime yearlings passed under the auctioneer's hammer at prices ranging from $10 to $13 per hundred pounds. In this connection, Mr. Robinson pointed out that not only are values lower on the big steer, but that it costs tremendously to make a pound of meat on the heavy animal and it is, therefore, a losing proposition under practically all circumstances. Mr. Robinson pointed out that in the very necessity of the case values go up when a particular kind of produce is scarce and this explains in part why certain types of cattle are high in price when they are scarce and relatively low when they are plentiful. The great majority of feeders are doing the same thing at the same time and it is the exceptional man who goes against the wishes of the crowd who actually gets the highest value for his produce.

The Hog-Cholera Situation.

Dr. W. B. Niles, who for many years has been carrying on hog-cholera investigation work, presented the status of the hog-cholera situation to the convention. He called attention to the fact that it is impossible to start the disease by any system of feeding whatever, as it can only come from the introduction of hog-cholera virus. This is introduced in various ways, it being spread most commonly by men going from farm to farm in their transactions with one another. Dr. Niles called special attention to the importance of refraining from the driving of vehicles onto any premises where there is hog cholera, and in turn, bringing this vehicle onto an uncontaminated farm. The spreading of the disease after it once enters a community can be, in most cases, traced to an incident where the infection was carried in just such a manner as this. Dr. Niles expressed great faith in the efficacy of the serum treatment and called special attention to the fact that where good serum is rightly used on well hogs or hogs that have a slight temperature, but yet show no signs of being sick, there will be a loss, not to exceed one-half of 1 per cent. The simultaneous method was recommended as being much more effective than the use of serum alone because the former brings about a permanent immunity, while the latter is of but a few weeks' duration. This scientist expressed himself as believing that cholera would eventually be stamped out, but this must be accomplished, not by the treating of all hogs, but by using serum in conjunction with the enforcement of proper quarantine regulations.

The Agricultural College.

Pres. A. R. Pearson, of the Iowa Agricultural College, addressed the convention, taking up more specifically the lines of investigational work that are being carried on by the agricultural college to the end that farmers are directly benefited in the production and the marketing of their products. A great many scientists are engaged at the college working out specific problems along the lines of plant diseases, the breeding of livestock and the finishing of the same for market, the formulating of ways and means for preventing livestock diseases of all kinds, while, in addition, the institution is training 2,500 young men and women annually for useful industries. There are, at present time, 1,000 students studying agriculture. A census taken among these students indicates that they are practically all intending to return to the farm. President Pearson, after pointing out the various steps that have been taken in the agricultural development of the country, called attention to the fact that we have at last come to what might be called the organization age. Farmers and stockmen must not only organize to advance their own cause, but they must keep their organization up to the highest point of efficiency. Every other industry is organized and the farmer has lagged behind until his failure to protect his own interests is militating in some cases against his welfare.

Resolutions.

Chief among the resolutions unanimously adopted by the association was one which declared the livestock contracts which shippers were obliged to sign were iniquitous and deprived, in every instance, the shipper of relief from the negligent acts of the carrier. Under the law, now interpreted and construed, the carrier is only compelled to pay $50 per head on cattle that are killed, though, in many instances, fat steers are sent to market worth from $125 to $150 per head. This condition of affairs is intolerable and should be remedied at once, according to the views expressed in this resolution. Among the other resolutions adopted were the following:

That there should be strict federal inspection of all meats and meat products imported into this country.

That the state of Illinois be urged speeedily to adopt effective regulation to restrict undue burden placed on shippers and consumers because, as the association believes, the charges exacted by the stock yards exchange and the Union Stock Yards and Transit Company, of Chicago, are exorbitant and unreasonable.

That the association deplores unfair conditions which surround production of meat, which ought to be both a legitimate and fairly remunerative industry, but which now is most perilous. The consumer is charged and pays for his meat a priee which is well nigh prohibitive.

That the association proclaim that high prices of beef are due to the fact that beef packers practically fix the prices the producers shall receive and consumers shall pay.

There should be a strict federal inspection of all hog cholera serum.

That the legal departments of railroads and other transportation companies should not be permitted to transfer certain and numerous claims from the state courts to federal courts merely to harass owners or defeat claims. That congress be urged to enact such legislation as will restrict this practice.

Officers Elected.

The following officers were elected for the ensuing year:

President, A. Sykes, of Des Moines; vice-president, J. A. Gunn, of Buckingham; treasurer, Charles Goodenow, of Wall Lake; secretary, H. C. Wallace, of Des Moines, chosen by the board of directors.

THIS LONG RANGE
TELESCOPE
FREE

This telescope when closed, as shown in the picture, is 12 inches long and has a circumference of more than 5 inches. When all five sections are pulled out it is 42 inches long. The lenses are carefully ground and adjusted by an expert at one of the largest factories in Europe. It is built of good materials and is brass bound throughout. A solar eye piece is sent with each telescope to be used in studying the sun and moon and other solar bodies. It is useful also as a magnifying glass.

See Objects Miles Away

With this telescope you can see distant objects which were invisible to the naked eye. Farmer's wife said she could see her husband plowing in a field six miles away. Dairyman found it a great help in watching windmill and cattle in distant pasture during hot weather. It saves long trips and useless worry by enabling you to see distant objects plainly.

Free Offer

We will send one of these 42-inch telescopes, free and postpaid, to all who send $1.50 to pay for a three year, new or renewal, subscription to THE IOWA HOMESTEAD; 156 big, helpful issues for $1.50—less than 1 cent a copy—and this big telescope as a premium.

We guarantee this telescope to please you in every way. We will refund your money at any time if it is not perfectly satisfactory. Address all letters to

THE IOWA HOMESTEAD,
DES MOINES, IOWA.

Solar Eye Piece Sent With Each Telescope. Can be Used in Studying the Sun and Moon.

Ask your neighbor to subscribe for The Homestead.

Clean Water at Right Temperature
In Cold Weather Means Healthy Hogs

Hogs won't drink as much as they should if given cold water. When they are forced to drink it they shiver away the fat you have built with costly feed. Their whole system is chilled. They will be healthier and put on more weight with less feed if given water with the chill off. Give them a constant supply of good water.

Ideal Hog Waterer *Will Not Freeze in Coldest Weather*

Keeps water at just right temperature even on below-zero days. Water ready night and day. Heavy galvanized steel tank. Protected trough—clean and sanitary. Simple. Practical. Inexpensive to operate. Automatic feed. Write for free literature.

National Manufacturing Co., 1723 Locust St., Des Moines, Iowa

MAKE BIG MONEY PULLING STUMPS

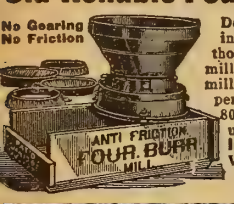
Pull the stumps from your fields and replace them with big crops. Don't pay taxes on idle land.

The Hercules All Steel Triple Power Stump Puller

pulls an acre of stumps a day. Pulls biggest stump in 5 minutes. Guaranteed against breakage for 3 years. 30 days free trial. Send name for book, free—and special low-price offer. Address

Hercules Mfg. Company, 941 22d St. Centerville, Iowa, U. S. A.

Old Reliable Four-Burr Mills



Double Set of Burrs grinding at same time. Many thousands in use—ground millions of bushels. 2-horse mill grinds 20 to 50 bushels per hour; 4-horse mill 40 to 80 bushels. We also manufacture the **Famous Iowa No. 2** mill for $12.50 Write for free illustrated catalog of Feed Mills and Hot Air Furnaces.

BOVEE GRINDER AND FURNACE WORKS
100 Eighth St. Waterloo, Iowa

NELSON SUBMERGED TANK HEATER

Note Construction: No heat going to waste, all passing under the water. Indispensable to all farmers. Pays for itself in two months with two cows. Burns straw, corn cobs, all rubbish, coal and wood. Ashes removed in a few seconds without disturbing the Heater. Heats water with one-half less fuel than any other Heater. Let us send you a Heater on two weeks' free trial, just as we have to thousands of others. This heater is now in use in thirty states, and Canada. If not sold by your dealer, do not neglect sending for catalog and price, now while it is fresh in your mind. A postal will bring our catalog and testimonials free of charge.

Nelson Mfg. Co., 19 Wall Street, Deerfield, Wis.

COOK YOUR FEED and SAVE Half the Cost—with the **PROFIT FARM BOILER**

With Dumping Caldron. Empties its kettle in one minute. The simplest and best arrangement for cooking food for stock. Also make Dairy and Laundry Stoves, Water and Steam Jacket Kettles, Hog Scalders, Caldrons, etc. Send for particulars and ask for circular P.

D. R. Sperry & Co., Batavia, Ill.

CLEAR $20 A DAY

Have Your Own Business — Be Your Own Master

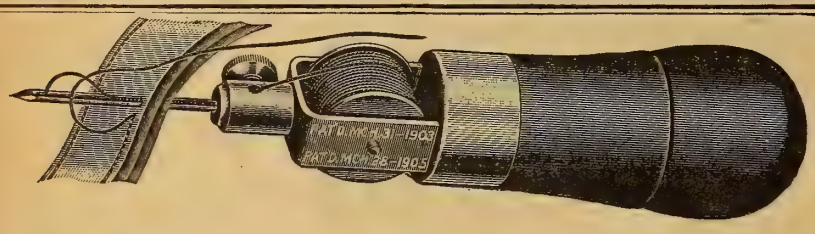
You will find a steady, profitable business with **POWERS COMBINED WELL-BORING AND DRILLING MACHINE**

You alone, with one team, can transport and operate it anywhere. Bores through any kind of soil and drills through rock. Bores 100 foot well in 10 hours. Sold on easy payments. Demand for wells is steadily increasing. Write for catalog and our Liberal Terms. Address

LISLE MFG. CO., Box 645, Clarinda, Ia.

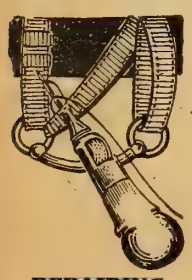
KENDALL'S SPAVIN CURE

The old reliable remedy you can depend on for Spavin, Curb, Splint, Ringbone or lameness. Thousands have proved it invaluable. Get a bottle from your druggist. Price per bottle $1. 6 for $5. "Treatise on the Horse" Free at druggist or from Dr. B. J. KENDALL CO., Enosburg Falls, Vt., U. S. A.

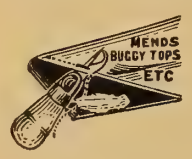


Get This Sewing Awl Free

This famous Myers Lockstitch Sewing Awl is 6¾ inches long; metal parts are nickel plated, has two diamond pointed grooved needles, tool case in handle, large reel of waxed thread and is strong and durable. With this sewing awl you can mend old or new harness, saddles, gun cases, suit cases, shoes, carpets, grain bags, awnings, pulley belts, buggy or automobile tops, and all kinds of leather goods. Farmers and stockmen use it to sew up wire cuts in live stock. Nothing to get out of order. It makes a lock stitch same as a sewing machine and is very simple. A woman can operate it as well as a man. Printed directions sent with each awl.



REPAIRING HARNESS



REPAIRING BUGGY TOP

REPAIRING SHOES

It Saves You Money Every Day

We will send one of these lock stitch sewing awls free and postpaid to all who send $1 to pay for a one year new or renewal subscription to The Iowa Homestead; 52 big, helpful issues—less than two cents a copy—and this lock stitch sewing awl as a premium.

We guarantee this awl to please you in every way. We will refund your money at any time if it is not perfectly satisfactory.

IOWA BEE KEEPERS MEET.

"The livest agricultural society in the state" was the manner in which Prof. W. J. Kennedy, of Ames, characterized the Iowa Bee Keepers' Association, which held its second annual convention in Des Moines last week. With the number of bee keepers in Iowa increasing at the rate of 10 or 15 per cent per annum there is greater interest in the subject today than ever before, with the result that fully 200 enthusiasts attended and participated in an unusually strong and interesting program. Ames was selected for the third annual convention and the following officers elected for the ensuing year: President, Frank C. Pellet, of Atlantic; vice-president, J. W. Stine, of Salem; secretary, S. W. Snyder, of Center Point; treasurer, C. H. True of Engelwood; directors, A. F. Bonney, of Buck Grove, E. C. Wheeler and H. B. Miller, of Marshalltown. The association, through the generosity of prominent bee keepers decided to donate 500 pounds of honey to the poor people of Des Moines to be distributed so that their tables may be provided with this toothsome delicacy on Christmas day. A campaign to make honey as conspicuous and as unfailing on Christmas tables as the cranberry has long been was inaugurated with much enthusiasm and there is every indication that bee keeping will be more popular and more profitable in Iowa in the next year than ever before. A live organization is back of the campaign and there is every indication of success.

Frank C. Pellett, president of the organization, went on to say that "only one state of equal area outranks Iowa in the value of her bees. Iowa far outranks Colorado, Idaho and other estern states of greater area whose honey production is so widely advertised. With proper encouragement Iowa can soon rank first, area considered. Only California and Texas with their great areas are now far ahead.

"This association has secured the passage of foul-brood quarantine law and better support of the bee inspectors office during the past year. Greatly increased facilities for exhibiting hive products at state and county fairs and much better premiums have also been secured. This interest on the part of the fairs will help to stimulate interest in the industry.

"The greatest need of the bee-keeping industry in Iowa now is better understanding on the part of the public of its importance to the state, and better methods of production and marketing on the part of the bee keeper. The use of second-hand containers and other equipment should be discouraged unless they be thoroughly disinfected, as this has been the source of much of the spread of foul brood.

"The society should endeavor to work out some system of crop distribution that would net the producer better prices without injury to the consumer. Too much honey is shipped to commission merchants in Chicago to be sold by them to jobbers who in turn sell it back to grocers near at hand. The securing of a list of persons who are in the market for honey, by the secretary of this association, who will place the list at the disposal of every member will be a step in this direction. If grocers wishing to buy honey knew that by writing to the secretary their wants would be placed before all the leading honey producers of Iowa, they would readily take advantage of the opportunity."

CATTLE IN BRAZIL.

The cattle-producing possibilities of Brazil have been overlooked because of the superiority of the Argentine as a stock-fattening country. The most suitable land in Brazil now being utilized for grazing cattle is in the states of Rio Grande do Sul, Parana, Santa Catharina, Sao Paulo, Minas Geraes, Goyaz, Matto Grosso, Baha, Ceara and Plauhy. All the territory in the southernmost state of Brazil, Rio Grande do Sul, in which are already located numerous ranches, has railways carrying its products to the ports on the Atlantic. The absence of reasonable railway transportation rates has prevented the cattle business from becoming profitable in most districts of Brazil. Shipment has been conducted, therefore, on a limited scale. Driving from one point to another must at present be resorted to, but it is only a question of a few years until this method of bringing the product to the markets will be superseded by modern transportation facilities. Refrigerator freight cars are now being provided.

While there are no reliable statistics of the pastoral industry in Brazil, it is estimated that there are 30,000,000 cattle in the country, of which Rio Grande do Sul is credited with 8,000,000 and Minas Geraes with 5,000,000. In 1908 the salted beef establishments of Rio Grande do Sul killed 598,000 cattle. In 1911 the state of Minas Geraes sent 349,653 cattle to the slaughter houses of Rio de Janeiro and Sao Paulo. Cattle for consumption in the large centers of population are sold at different markets situated at railway centers in the interior of the ranching states and are handled as follows: The herdsman acquires the cattle from the rancher and drives them to a central point, where they are purchased by the retail meat merchant.

For the last two years cattle in Brazil, as elsewhere, have risen in value, and since the number in Brazil does not supply the local demand, the tendency will be toward a further rise in price. Some six months ago fat steers, weighing 1,000 to 1,100 pounds, delivered at the point of slaughter, sold at $40 to $45, according to quality and condition. This year cattle have advanced in value at least $3 a head, but an expert here estimates that a ranch could be stocked with cows in Matto Grosso, Goyaz, or Minas Geraes at not exceeding $23 a head. In the cities of Rio de Janeiro, Bahia, Pernambuco and Sao Paulo the average price of beef is 11 to 16 cents a pound. On the Amazon the price is much higher. —[Indianapolis News.

Eight two-year-old Percheron stallions imported and for sale by S. Metz & Sons, Homewood, Ill. See advertisement on page 34.

Arthur M. Evans in his daily letter in the Chicago Record-Herald is authority for the statement that a saving of $25,000,000 a year has been effected by grain growers in the middle West through the development within the last decade of farmers' elevator companies, an illustration of what can be accomplished through co-operation and organization. In ten years, according to Mr. Evans, this co-operative movement has grown until it now embraces about 2,400 farmers' grain companies, with at least 275,000 stockholders. In the middle West states there are about 1,000 of the companies, wtih about 200,000 farmers as members.

FEED MILLS
ALL STEEL

Uncle Sam advises farmers to grind the feed for their cattle. Why? Because it takes less ground feed than whole feed to satisfy them. Also the cattle thrive much better on ground feed. The Fuller & Johnson Special All-Steel Feed Mills crush and grind feed to complete satisfaction. Write for full description.

KEROSENE ENGINES
2½ to 20 H.P., Stationary and Portable

Fuller & Johnson Kerosene Engines cut fuel bills in two. Think of it!—power at half of former cost. Will also run on gasoline, distillate, motor spirits, etc. A 6-H. P. Fuller & Johnson Kerosene Engine with our unequaled cob crusher and grinder makes a most economical, serviceable, satisfactory outfit. Write for catalog.

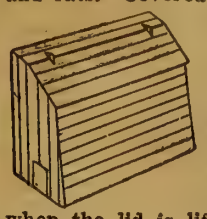
WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm or something that is connected with the home.

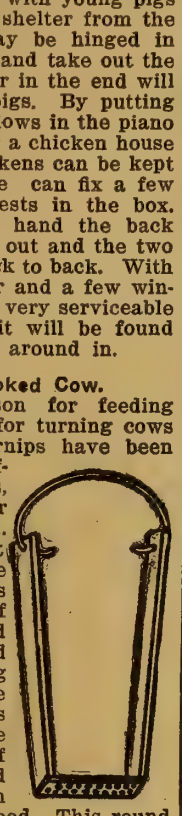
USES FOR PIANO BOX.

A piano box may be profitably used for several purposes. By putting the slanting portion of the top on hinges so that it can be lifted, it may be used for a corn or oat bin. This is placed in the hallway of the barn on blocks so that it will not rest on the floor and become a harbor for mice and rats. Covered with good roofing paper that will turn water the piano box may be used for a coal bin. If it is set with the opening toward the south, the snow or rain from the north or east will not beat into the box when the lid is lifted. The box has also been found useful as a hog house when covered to keep out wind and rain. The small sow with young pigs can find here a good shelter from the storms. The top may be hinged in order to put in straw and take out the old bed. A small door in the end will admit the sow and pigs. By putting one or two small windows in the piano box it can be used for a chicken house in which a dozen chickens can be kept very comfortably. One can fix a few roosts and several nests in the box. If two boxes are on hand the back ends may be knocked out and the two boxes set together back to back. With the addition of a door and a few windows this will make a very serviceable house for hens and it will be found light and easy to get around in.



To Cure a Choked Cow.

Now that the season for feeding roots in the yard or for turning cows into fields where turnips have been grown or feeding refuse apples is with us, we occasionally hear of cows being choked. A contrivance that will be found effective to use in a case of this kind may be made of a round piece of wood two inches thick and seven inches long fastened to two side pieces eighteen inches long, with a hole bored at each end of the side pieces and also several holes in the round pieces of wood. This round piece is put into the mouth of the choking cow and a rope passed through the holes in the side pieces, which is fastened over her head in the manner of a bridle. The animal breathes through the holes in the bit and in her effort to rid her mouth of this a great flow of saliva takes place which runs down her throat when she holds her head up and assists in causing the obstruction to pass down or be ejected. Besides it entirely prevents the animals from becoming hoven and thus dying from suffocation. There are many methods in use to assist animals that are choked, but many of them are dangerous on account of injuring the gullet.



Milk Cupboard.

In many farm houses the kitchen is obliged to serve many purposes, especially in winter. The milk and cream is often kept in this room, as it is the warmest spot in the house. There is nothing objectionable in this if the kitchen is kept clean and well ventilated. A well-contrived cupboard kept specially for the milk and cream where they will be safe from dust and drafts, and still have proper ventilation, is a great advantage. The cupboard shown herewith is made to fit into a corner, being six sided, where it will occupy the least room. It should be wide enough to hold two quart pans, or four upon each shelf. This will be three feet outside measurement. Figure 1 shows the cupboard closed and finished except the netting while figure 2 shows a cross section. A post is placed in the center which holds the shelves; this is square. The shelves and cross-pieces are let into the post and are firmly fastened, as shown. Each shelf holds four pans. The post is made to turn around so that as one pan is put on the shelf it is pushed on one side and room appears for another. The lowest shelf is kept far enough from the bottom to give space for two or three cream jars. The whole is covered with mosquito netting doubled twice. A door is made of one outside section hung with two small hinges.

Fig. 1.

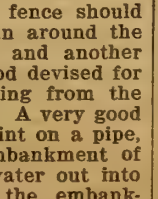


Fig 2.

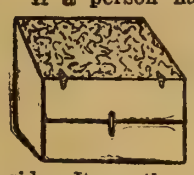
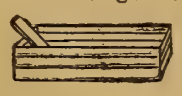
A Box For Kindling.

If a person has no place to keep chips and kindling indoors, a large dry goods box may be utilized for that purpose. It may be covered with a cheap rubber roofing and a door hung to one side. It can then be piled full of kindling which will keep dry when it rains or snows.



A Scoop Board.

Secure a board one foot wide and four feet long. Let one end rest on bottom of wagon bed a couple of feet from the back end, and lean it against the back board of bed. Then when bed is filled with husked corn it will be no trouble to scoop it out by running the scoop down the board. This will save any necessity of throwing out the corn with the hand until there is room to use the scoop.



Stock Water From the Pond.

The man who has nothing better than a pond from which he must secure water for his stock should not allow them to run to the pond and tramp in the dirt and otherwise befoul the water. A good fence should be run around the pond, and another method devised for watering from the pond. A very good plan is to put a sand point on a pipe, drive it through the embankment of the pond and run the water out into a trough located near the embankment. By putting a spigot on the end of the pipe the water can be turned into a trough and shut off when trough is filled. In winter time it may be necessary to pack manure about the pipe to keep from freezing.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

CONGESTED LIVERS IN FOWLS.

At the rate Mrs. Noel's chickens are dying, her flock will soon be a thing of the past, unless prompt measures are taken. In a recent letter she says:

I am having all kinds of grief with my chickens this fall. Have done everything I know, but the trouble continues. A neighbor advised that I write to this paper for help. The first noticeable trouble is a lameness in one leg and foot. Later they quit eating, sit around for two or three days when the comb turns dark, and they die. In some cases there will be a little bowel trouble, while others will have none at all. I dissected a pullet yesterday, and all of the organs were bright, excepting the liver which was very dark. Fully 150 have died in this manner; most of them are fat and heavy. Can you tell me the trouble and a remedy?

It is "dead easy" to tell what is the trouble, but the remedy is another affair. In this case it would seem that the direct cause of the trouble is from poor circulation. This may be brought about from various causes, the most common, perhaps, being from a diseased condition of the crop or intestines that causes an obstruction of the circulation of the blood. The basis of poor circulation can frequently be traced to the diet; usually from feeding an excess of highly stimulating foods. The trouble may have been brewing since last winter, so long does it sometimes take for the trouble to show up. It would be more nearly possible to say more definitely, if the feed and housing conditions were known. Overcrowding, causing the fowls to become too warm, lack of exercise combined with stuffing the hens with "egg foods," would cause even a hustling hen to get lazy. If any of these conditions occur, they should be counteracted. Feed very sparingly of grain, cut out the corn, give liberally of succulent food, even if it must be purchased. Go to your druggist, and get calomel in 1-grain doses. Administer one to each hen, and follow with 20 grains epsom salts, after twelve hours. If it has not passed on to a more advanced stage, the greater part of the flock should be saved. It is to be feared that "everything I know" in the way of treatment has kept the trouble aggravated. Better far to seek advice at the earliest symptom, than to, figuratively speaking, "work in the dark."

feed, the use of stimulants, and not infrequently from worms. There are many things that will cause a slow irritation and it would be impossible to say which it is.

All fowls do not show the same symptoms. One valuable cock first showed his indisposition by becoming constipated. When straining he would evacuate a white slime and give a peculiar cry, indicating great pain. In this case a dose of salts, about as much as would be required for a two-year-old child, was given to him in water together with five drops of turpentine. The dose was repeated in a couple of hours, and before night the obstruction had passed and he was crowing the next morning.

If this bird had not been so valuable he would not have been treated and would have died the same as Mrs. A.'s fowls did. The diarrhea indicates that liver trouble has developed which makes a complication very hard to combat. If the cause can be located it will help matters. Examine the corn your fowls are eating. There is much mold this season, and that would of itself cause the trouble. Look for decaying meat and unslaked lime, poison of any kind, and watch the droppings for worms.

The treatment given the cock mentioned is as good as any, and the turpentine will get rid of any possible worms. Any kind of liver medicine is to be recommended, whether expressly for chickens or not. After the crop is empty, feed very lightly of soft food. One teaspoonful of salts in a mash, for every five hens, fed twice a week will be a good treatment for the flock as a whole.

John W. Houselog
White Plymouth Rocks
& Mammoth Pekin Ducks
Eggs and Stock For Sale
Quality first last and always

Bellevue, Iowa, July 9, 1913.

Homestead Company,
Des Moines, Iowa.
GENTLEMEN:---I must say that an advertisement in the Homestead is a puller. I sold all my surplus stock last spring and all the eggs I had to spare. You may depend upon my being with you again when the season arrives for advertising my stock.
Yours truly,
John W. Houselog.

CATARRH OF THE CROP IN FOWLS.

Trouble of a far different nature has invaded the farm flock of a reader of this paper. Mrs. Nellie A. writes:

Many of my chickens have died. They have a slime in the throat and diarrhea, similar to cholera. Some of them live a week, and some longer. If there is anything I can do for them, please let me know. If not, I will sell the well ones, and kill the sick.

It is orthodox to call everything which relates to the head, roup. Even chicken pox is "roup" with many people.

If this poultry raiser will examine her fowls carefully she will probably find the crop distended, though not hard. The contents are largely liquid and gas. It may be caused from feed containing too much fiber, from moldy

SYMPTOMS OF TUBERCULOSIS.

While dressing chickens for the table, one enterprising woman discovered that her fowls were not exactly healthy. In her communication she says:

I would like to ask the editor of the poultry department, if yellow spots inside of a chicken indicate tuberculosis. I have noticed spots located near the lungs of the last six chickens I have dressed. The first of the trouble was noticed three weeks ago. They are fat and seem in good health, but the lungs do not look right. These spots resemble the cooked yolk of an egg, and vary in size. I would like to know if this is tuberculosis, if there is any cure, and if those affected can be told from the well ones. I would like to sell any that are all right. Is there danger of other farm animals becoming affected, or people? What would you advise one to do with them?

Only that this woman was quick to note the diseased condition of the chickens while dressing them, the trouble would probably have made sad ravages before any outward symptom was in evidence. After the trouble reaches the more advanced stages, the victims lose flesh, become weak and act very much as human beings would. It is a germ disease, caused by a bacillus, and must be communicated by contagion. The germ, of its self, can not move, and is carried in divers ways, usually by a person who has visited infected yards, or by crows and sparrows. The latter are

S. C. BLACK MINORCA cockerels, high-scoring birds. $1.50 each if taken at once. Address Neils Larson — Route 4 — Alden, Iowa.

directly responsible for more infected fowls than many people realize, as well as infesting poultry with mites. All fowls are not susceptible to tuberculosis; rather the weak or indisposed, whether constitutionally so, or brought about by wrong conditions. Plenty of sunlight and fresh air is the only sure destroyer of germs. Spraying with a good insecticide is to be recommended, but germs, like other noxious objects, cannot live in the open sunlight. Every poultry building should be so arranged that the sun's rays can penetrate every nook and corner. After burning all litter and being reasonably sure that there is no danger from outside infection, put enough permanganate of potash in the drinking water to color it a bright red. This is a good disinfectant and precludes contagion through a common drinking vessel. If that were our flock, we would not dispose of them just yet, but watch developments, being sure to keep them in the open as much as possible. If one shows up anemic, kill and examine. Put a piece of a lung in water; if it floats, it is healthy; if diseased, it will sink. Burn, or bury deeply, all diseased birds. If the trouble does not abate, and the flock must be disposed of, the only safe way, would be to dress them before selling. It is impossible, otherwise, to know which are fit for food. There is little danger of other animals, and people, becoming infected, though not at all impossible. The germ is probably the same in all things, but has become so differentiated as to reduce the danger to a miuimum.

This is what one woman did with a flock of forty-five hens of an American breed: The hens began to lay in November, before the weather was very cold. It seems to be difficult to coax them to begin to lay after winter sets in in earnest. All through the coldest winter months when eggs were 40 cents a dozen, she gathered 50 per cent egg yield. The hens did not molt early so she began to feed for eggs before the molt. Beginning the first of September the fowls were fed a mash composed of bran, with about 5 per cent of beef added, the whole mixed to a crumbly consistency with milk—either sweet or sour. This was the morning meal, and not enough given to satisfy their appetites. At noon they were given wheat or oats, scattered in litter. At night they were given a full feed of corn. Turnip tops were given for green feed, while grit and crushed shells were always accessible. The poultry building is not at all modern; in fact, would hardly be considered an average house. All windows were kept open, only on bitterly cold days. The building were kept scrupulously clean, by the use of petroleum and whitewash.

Not long since, this paper published an article about fowls being stuffed before killing. Uncovering this trick of unprincipled dealers, the department of agriculture issued a warning to housewives to be on their guard against sand-stuffed fowls. The government experts announce the practice of stuffing chickens with sand as one that is assuming considerable proportions. The legitimate fattening of fowls is to be encouraged, but the department frowns on weighing fowls from the sand pits. One teacher of domestic science related how she had found a half pound of corn in the crop of a fowl that had been purchased to demonstrate to her class.

If one has poultry to sell, it is well to keep posted on prices and not be at the mercy of the huckster, who travels over the country to procure poultry, at any price he can get the poultry raiser to take. Many of us there are, who can remember when the farmer was at the mercy of the stock buyer, who made the rounds of the country and set the "market price" to suit himself. Poultry is worthy of just as much consideration and improved methods as any other branch of farming.

POINTERS.

—In his separate advertisements in the Poultry Department of this paper, Earl Bloom, Bridgewater, Iowa, calls the attention of our readers to the fact that he has for sale Single Comb Brown Leghorn and Barred Plymouth Rock cockerels. He has 50 birds to select from. His Plymouth Rocks are large, well marked, with deep narrow barring, and will be sold at from $1.50 to $2.50 each, with a few extraordinary ones a little higher. He says his Leghorns are as good as the best and will be sold at $1 and up.

—Single Comb White Leghorn cockerels from prize-winning stock will be sold cheap by Mrs. C. J. Way, Bussey, Iowa, as per advertisement on page 19. She also has for sale some Single Comb Brown Leghorn pullets.

—In an announcement on page 18 F. M. Lane, Prescott, Iowa, announces that he has for sale Rose Comb Rhode Island Red cockerels, the big-boned sort that are vigorous, of good color and excellent lines of breeding. He quotes some very low prices in his advertisement.

—Eddith Andrews, Atlantic, Iowa, advertises range bred, large boned, Single Comb Rhode Island Red cockerels at $2 and up, and high-class, scored birds at $4 to $6. She states that these are bright, lively, healthy birds and bred from the best Tennessee and Georgia stock. See advertisement on page 18.

—Mrs. C. A. Robinson, R. 6, Griswold, Iowa, whose advertisement of Indian Runner ducks may be found on page 19, advises us that she has an extra flock of true fawn and white ducks of the Reinhard strain. Her winnings at the Villisca show indicate the character of the birds.

—Mrs. Frank Hoffman, Birmingham, Iowa, has for sale fine Rose Comb Silver Laced Wyandottes, and advertises them on this page. The quality of these birds is indicated by the fact that through previous advertisements in this paper her surplus stock has been quickly disposed of.

—O. H. Stilson, Corwith, Iowa, who has been breeding Langshan chickens for twenty years, and advertising them in The Homestead each year, makes a new announcement on page 18. He breeds Langshans exclusively and is prepared to furnish high-class cockerels and pullets at reasonable prices.

—Mrs. Wm. H. Nolin, Monroe, Iowa, announces in an advertisement on page 19 that her exhibit of Mammoth Bronze turkeys at the Iowa State Poultry and Pet Stock Show succeeded in winning first on young tom, second on old tom, second on hen and third on pullet. She still has stock for sale.

—A closing-out sale of White Wyandottes is advertised on this page by the Gregory farm. These birds are of the highest order of excellence and at the special prices quoted in the advertisement are bargains which cannot be obtained elsewhere. Send orders or inquiries to W. S. Gregory & Son, R. 2, Keota, Iowa.

—Choice Pekin ducks and White Wyandotte chickens, which are advertised on page 19 by E. S. Dyas are the owner says, the finest birds he ever raised. These pens have never been able to produce enough to supply the demand. Size and quality are responsible for it. For prices write to E. S. Dyas, Bellevue, Iowa.

—More than fifteen years, M. E. Kraft, Brooklyn, Iowa, has been engaged in raising pure-bred Buff Plymouth Rock Chickens. At the present time he has hens and cockerels good enough for breeding pens for exhibition, and will quote prices according to quality. Write for particulars. See advertisement on this page.

—S. B. Moyle, Hillsboro, Iowa, advertises Bourbon Red Turkeys, Single Comb Rhode Island Red cockerels on this page. The advertiser states that these birds are the best raised in five years. The prices are reasonable and the quality such as would justify the trade which last year disposed of all surplus stock with only two insertions of an advertisement on page 19.

—In three different advertisements in this paper, Mrs. Jennie Efnor advises our readers that she has for sale Single Comb Rhode Island Red cockerels, Mammoth Bronze turkeys and Indian Runner ducks. The birds of each of these breeds are described as unusually good and the prices quoted in the advertisement are very low. Address orders to Mrs. Jenny Efnor, R. 1, Monroe, Iowa.

—S. M. Compton, Newton, Iowa, whose advertisement appears on this page, writes: "I have been breeding White poultry for fifteen years and have been using the advertising columns of The Homestead for twelve years with good results. I have as fine a lot of White Rock cockerels and pullets this year as I ever raised, but only have a few White Holland turkeys and Embden geese. Write me your wants and I will try to please you."

—Some nice, heavy-boned, strong cockerels are being offered by W. B. Cooper, Milford, Neb. They are R. C. Rhode Island Reds and come from a strain that has taken a long time to perfect. They are priced so that farmers can buy and this is the class of trade that is appreciated. These birds are good enough to head good pens, but they are being priced at from $1 to $1.50 and should find immediate sale at those prices. Address W. B. Cooper, Milford, Neb. See advertisement on page 18.

—Fifty choice Barred Plymouth Rock cockerels and a few Golden Wyandottes are offered for sale by Judge J. L. Todd. These are from prize winners. These cockerels have been brought in from the farm where they had free range. The Plymouth Rocks are from the Royal Blue and Ideal strains. They are closely barred and good, lusty, healthy birds. Those who want to obtain birds with the best blood lines back of them can make no mistake in making their selections from the Todd flocks. At present he is crowded for room and for the next three weeks will make low prices in order to reduce numbers. Address inquiries to J. L. Todd, R. 3, Des Moines, Iowa. See advertisement on this page.

WYANDOTTES.

WITH THE EDITOR.

"Oh, he is a good fellow and everybody likes him, but he has never done any good." This by a good friend and neighbor of the man in question, whose remark carried nothing of censure. But—he had never "done any good."

When we hear of a failure in the world, a mental picture is involuntarily drawn of a harmless, ambling, good-natured sort of fellow, who kindly permits his family to do the hustling while he does the moralizing and, incidentally, the whittling.

As a boy this supposed failure cared for his aged parents, whose only legacy they bequeathed was that of honor and integrity. As a young husband and father he was ideal. His crops were never any better than his neighbors, the country was new and raw, no one had a good house to live in, but somehow he and his wife always managed to live a little better than anyone else under similar circumstances. Everyone had enough to eat, but the deft hand of the wife and mother evolved dishes that were both dainty and palatable, from exactly the same food that all too often was cooked, and, figuratively speaking, thrown on the table.

Everyone practically wore the same kind of clothes; the children of this family, although no more money was spent, presented a far different appearance. Little individual touches were added to the clothing which transformed the cheapest cloth to a thing of beauty. Rugs were crocheted to lay on the ugly, uneven floors; tablecloths made from the cheapest of unbleached muslin were caused to speak for themselves by some little touch of handiwork. It was in this atmosphere that the children received their first impressions. A home where love, peace, hospitality, and, despite the unlovely surroundings, beauty reigned.

When the eldest child was only ten the mother was suddenly taken ill and died, thus severing a companionship that was as nearly perfect as the world ever knows. The family had moved to town, where the father was a salaried employe. Far better that they did. Not all men are meant to be farmers, and this fact applies to this one in particular.

Arrangements were made whereby the rent, that was being paid each month, was used as payment on a cottage of their own. Almost all of the work of building was done by the father with the aid of a very moderate-priced helper. The tiny home contained only three rooms, but never did that much space count for more. The living room faced the south, and the only extravagance was the bay window, which, in reality, consisted of the whole side of the house. With the expenditure of $1 for plants to start a window flower garden this room in a short time became a perfect bower of beauty.

Then came the trying part—that of keeping the children together. The work at the store was very exacting, requiring long hours; the duties at the house were manifold. Anyone acquainted with children can understand about how much four children, from a wee tot to ten years old, can do in the business of keeping house. Not only that: Problems appeared on the scene that had no reference whatever to the actual work. The older the kiddies grew the more serious and complicated did these questions become. These were solved, not by moral lectures, neither by harshness, but by becoming one of the youngsters, and thus "beating the time" of every other kid in town.

Each and every one of these young people had the opportunity for a high-school education. For the most part they finished school, and all made good. Today they are settled near the home, where one daughter yet stays. The grandchildren vie with each other as to who can do the most for him. If the lion's share of something good for dinner is missing, no questions are asked; the mother well knows it has been "swiped for grandpa." This man, who filled the place of both father and mother to his own children, is today a brother and chum to two generations. He simply refuses to grow old, and well do the many members of the family know that "We'll never get anything on dad."

He does not own an automobile; the price of a good touring car went to keep a brother, suffering from an incurable disease, as comfortable as possible, through the terrible years of pain. No penniless boy, when a show struck town, ever got left out. From somewhere there came the "price." The deserving and the undeserving, share and share alike, they are all here and they want to see the show. As of old, the home is hospitably open; and as then everyone, the rich and the poor, the high and the low, is eager to take advantage of this fact. "Y-e-s, that's all so—even more—b-u-t—well, you see he had the same opportunity to own a quarter section of this $250-an-acre land as the rest of us!"

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Fight when you are down; die hard—determine at least to do—and you won't die at all.—James H. West.

It's the song ye sing, and the smiles ye wear,
That's makin' the sun shine everywhere.
—James Whitcomb Riley.

HOMESPUN WRINKLES.

Anyone who has tried to get the juice from a lemon not wholly ripe can understand what it means. If this kind of fruit is placed in the oven a short time the juice is more easily procured, and much more of it.

Nail two spools to the wall, about two inches apart; hang the broom upside down between them. This makes a better broom holder than any agent can offer you for a hard-earned quarter.

This is how one cook makes the most of a boiled ham: Before the ham is cold she removes the bone and fills the hollow with the small pieces left from the cutting. The whole is then tied up tight; when cool the whole can be sliced without a particle of waste.

When the weather is cold, the washings big, and the cold gets into your bones, try soaking the clothes in naphtha soap or powder. The dirt will fairly drop out, and the steam incident to the washing machine and its bushels of water will be eliminated. Not the orthodox way, perhaps, but a saver of womankind.

It is a beautiful thing to live. Life is a fine art. It is the supreme consummation of all the arts, the final finish and flower.—Lillian Whiting.

These are the things I prize
And hold of deepest worth:
Light of the sapphire skies,
Shelter of the forest, comfort of the grass,
Shadow of clouds that swiftly pass,
And after showers,
The smell of flowers,
And of the good brown earth,
And best of all along the way,
Friendship and mirth.

THINGS GOOD TO EAT.

Hashed Brown Potatoes.—Peel and dice some raw potatoes. Boil until tender, and drain off the water. Pour into a baking dish, and nearly cover with a rich cream sauce. Cover and bake in a rather hot oven. Uncover and brown the last ten minutes. Good to serve with cold meats. This together with graham gems and fruit, make a wholesome, satisfying meal.

Left-Over Chicken.—If some of the sauce and chicken should be left over, try scalloping them with a can of tomatoes. Place a layer of the tomatoes in the bottom of a pudding dish, cover with a layer of rolled crackers and bits of butter. Mix the chicken and sauce, and spread over the tomatoes. Alternate with the tomatoes and chicken until all are used. Place a layer of crackers last, crushed and dotted with butter. Bake in a moderate oven, being careful to brown top.

Quick Graham Bread.—Two cups graham flour, one cup white flour, one-half teaspoonful salt. Sift all together. Add two large tablespoonfuls molasses, and two cups sour milk, in which one teaspoonful soda has been dissolved. Mix to rather stiff batter, turn into greased pan and bake. It may not require all of the milk. Should be baked in a slow oven.

Lemon Apple Pie.—This pie is good to help splice out a rapidly diminishing supply of fruit. Grate the rind, and strain the juice of two lemons; pare

Costs a little more than others—worth it

Rayo Lamps in 3,000,000 Homes

Our eyes are certainly entitled to the best attention and treatment. They are one's most faithful servants.

Kerosene lamps give the best light for reading and studying. All authorities agree on this. But not *any* kind of kerosene lamp will do.

A Rayo Lamp will cost you very little—if any more—than an ordinary lamp. But it is the most satisfactory that money affords. This is proved by its great universal use. Three million families—over ten million men, women and children—live and work and read and study by its clear, mellow glow. A host like this can't be mistaken in their judgment.

No glare or flicker to contend with, when you get the genuine Rayo. Just good, reliable, eye-restful light—and plenty of it. Ask your dealer for demonstration. Illustrated booklet on request.

core and chop one large tart apple. Pound two crackers very fine, and mix with two teaspoonfuls melted butter. Beat the yolks of four eggs to a thick froth, and mix all ingredients together. Beat thoroughly, and bake with one crust. When done, beat the whites of the eggs to a stiff froth, add four tablespoonfuls powdered sugar. Spread lightly over the pies, set in oven until a light brown.

AMONG OURSELVES.

This letter is given first place because it needs immediate attention. Dear members, do not pass it by with a glance. The writer signs herself "Lonesome Girl."

I need advice and come to Among Ourselves, hoping to hear from several members soon. I am a well-to-do farmer's daughter, twenty-five years of age. My life has been spent at home, helping mother with the work that falls to the lot of any farm woman. I attended the rural school until I was fourteen, and had completed the seventh grade. That is the extent of my schooling, and I have always craved an education. I can do almost any kind of sewing, though I was not taught by mother or anyone else. Just "picked it up." We have lived in this state since last spring. The other years were spent in an adjoining state, and it is there that all of my friends live. This is a very lonesome country, with nothing but foreigners for neighbors. These people will associate with no one but their own kind. We, so far, have had no visitors, and I have not been introduced to a single person since we came here. There is no church at all like our own denomination to attend, and I feel shut out of the world. We live on our own farm, and I have a nice home. The advice I want is this: Should I leave home, or should I not? I am the only daughter, there are seven boys, all older than I. All are married excepting the youngest, and he will be married in two years, and will get the home place. They make fun of me because I am not married, and call me "an old maid." This kind of treatment often brings bitter tears, because I have turned away good, as well as wealthy young men, so as not to leave mother. I realize my mistake now; no one seems to understand the sacrifice. Recently I was offered an honor scholarship to the Normal school of our state—shall I accept it, or should I go back to our old home town and get a position to work? Do you think it would look right for me to do this? My parents would like to see me married, but there are no congenial young men here. I am going to leave here the latter part of January for a visit to the old home. Now, dear readers, shall I stay there, or come back here?

It is with much gratification that an answer has been received to the call not long since, asking for plans to save the time and strength of farm women. Mrs. Crouse is a farm woman who is right in the busy time of corn husking. This letter is very practical, and says:

Having had twenty-three years' experience in corn husking, I will add my mite. My family is nearly grown, I have good health and get much happiness from their company. For the first three years I had few labor-saving devices. They seemed to be out of the question in those days. But while my children were small, I kept a girl to help through the busy season, knowing this was better than to overdo and neglect the children. Girls were easier to get then, and the wages much cheaper—so was corn. We did not have school during corn picking. As soon as the three older children, a boy and two girls, were strong enough they helped pick, as it was very hard to get men. With the help of a girl, the two younger children and a gasoline engine to wash, I got along very well. There are so many things the tots can do if we but put them at it. In these days of good crops and prices I do not see why the farm woman should overdo. She should have every labor-saving device available. I find the use of linoleum and rugs to be expensive, but they are great labor savers, also the vacuum cleaner. The dish washer is liked by a great many, although I do not use it. The water should be in the house. The cost is small. A wash house is fine; it need not be very large, but should be well equipped. Mine has a fifteen-gallon heater, a good washer, wringer and a gasoline engine. This saves the tidy kitchen, as well as the trouble and strength to carry things in and out again. We can't all afford modern homes, but the farmers can surely afford the modern labor-saving devices for the homes they have. My advice to the women of the corn belt is to demand these things; then by good management you can get through the busy season none the worse for the wear.

Until we impress the fact, our men folks will never realize the actual need of help for the wife and mother. They have troubles of their own, and cannot possibly understand what it means to keep the house work up. When everything is done it just looks as if it had always been done. Of all deceiving things house work is the limit. This thing of a woman doing without the actual necessaries that are required to do her work is more the result of tradition than anyone's fault. Time was when times were so hard that little could be purchased, and what little money was available would be used for necessary tools to plant the crop, not from a sense of unfairness, but because no crop, no anything—not even enough to eat. People get so accustomed to this order of things, that it is hard to break over the old custom. Men, even the most thoughtful, cannot wholly understand, and so it is "up to us women."

Suppose We Give You $25 —That's practically what we do. $5 or $25 or $30 or $40—different sums depending on which Kalamazoo Stove you buy. You keep the dealer's profit. You get your stove direct from the Kalamazoo factory. It's shipped the day your order comes. You try it for 30 days *free*—and if you keep it you can still send it back any time within a year if you're dissatisfied with its work. We pay freight charges.

SINCERITY.

To be sincere. To look life in the eyes
With calm, undrooping gaze, Always to mean
The high and truthful thing. Never to screen
Behind the unmeant word, the sharp surprise
Of cunning, never tell the little lies
Of look or thought. Always to choose between
The true and small, the true and large, serene
And high above life's cheap dishonesties.

The soul that steers by this unfading star,
Needs never other compass. All the far
Wide waste shall blaze with guiding light, though rocks
And sirens meet and mock its straining gaze.
Secure from storms and all life's battle shocks,
It shall not turn from any righteous ways.

It is too bad, but no doubt our boys and girls have heard expressions like this: "No business can be carried on successfully if one is wholly truthful. You are bound, more or less, to tell falsehoods." Now, boys, to use your own expression, "There's nothing to it."

Falsehood and pretense may gain one point, with the result that it will be used against you ever after. If a man cheats, or is in any way dishonorable, even though he stays within the limit of the law, he is just as much a thief as if he had been sent to prison. Compare the man who is tricky and deceitful with one who believes in being "straight" whether it brings him any money or not. Look carefully at their faces. On the one you will see lines of cunning and greed. In the other there is a sincerity that cannot be mistaken. It is difficult to distinguish by the lines on a young face; it is after it grows older that the lines tell the story. And the worst of it is, that once formed they can never be removed.

These lines begin to form early in life; a boy, little more than a baby, thought it lots of fun to throw coal at a kitten. So interested did he become that he placed a pan of milk near, and hid, so that when the little creature came to drink he could "get him." Right there that youngster began to cause lines of cruelty to form. Luckily his mother appeared on the scene; what happened would be as well left untold. Later the lad was heard to soliloquize: "Mamma never scolded one word when I broke her bestest china pitcher, and it was better than that measly little cat—it'll get big and catch chickens; wonder if my mother is getting fussy? She said I was a sneak—Oh! that's what a cat is that pretends to like to play with chickens, and then kills 'em. Say! no more 'sneak' for me!"

Dearborn St., CHICAGO.

HOW TO BE KIND.

(First Prize.)

By treating old people as kindly as we do the young. Be cheerful, be honest, and you will be happy. Never speak disrespectfully to, or of, anyone.

There are boys who think it smart to throw stones at a dog, or tie tin cans to their tails. These are the very first ones to howl when anyone touches them. There will be a time when they will have to suffer for what they have passed on to others.

A boy or girl should not wish to be paid for doing a favor; there is a time coming when we will be old, and time goes so fast that I am thinking it won't be very long coming.

This story is short, and kind of rough, but it is the plain truth. While I am not as good as I should be, I am not guilty of any of the things I have mentioned. —William Dunn.

[None of us are as good as we should be, my boy, but your letter is splendid. It is easily known what kind of man this boy of ours will make. Your letter is not rough, either, it is only boyish; if all boys were girls, why, there wouldn't be any boys! The editor is glad to find the boys' letters among the others. Do try to remember, boys, that this department is for both boys and girls.]

A Christmas Story.

(Second Prize.)

It was just the day before Christmas, and all of the little men in Santa Claus' castle were busy tying up toys. One was tying a large box which held a beautiful doll, whose hair was a mass of golden curls; she had blue eyes and a rosebud mouth. There were many beautiful dresses for her, too.

Another was tying a drum, and another a pair of skates. All of them were busy. Old Santa himself was putting the finishing touches to a doll house.

They had worked all year on the toys, and so were getting tired. Mrs. Santa Claus yet had a doll's hood to make, when all would be in readiness.

Four of the little men were hitching the reindeer to the sleigh. They drove to Santa's castle, and began to pile on the Christmas gifts, until the sleigh was supposed to be full. But it seemed that there was always room for more. To and fro ran the little men until the last package was stowed away.

With a merry laugh Old Santa climbed into the seat, tucked the thick robes around him, cracked his whip and started on his journey around the world, to fill the waiting stockings.

—Grace Hand, age 14 years.

The Orphans' Thanksgiving Barrel.

(Third Prize.)

Well, Thanksgiving day for 1913 has passed, but Christmas is yet to come. I was much interested in the first prize story last week and the editor's remarks as well.

About two weeks ago the ladies of our church decided to send a Thanksgiving barrel to an orphan's home of a near-by city. The ladies' aid pieced two comforts and one quilt, and two teachers sent two dozen handkerchiefs. Two other girls donated a dozen stockings, and the men of the church put all the pennies their stores happened to have into the different stockings.

Besides this there were nine stocking caps, a nice pair of blankets, some pumpkins, a gallon of jelly, apples and other fruit. Then there were dresses, and other clothing. I gave a nice dress that I had outgrown. Many other things were sent, all of which were nice and in good repair.

They were all packed tightly in a barrel, and sent in the name of the Sabbath school. We have not yet heard from them, but we sincerely hope it was all right.

—Doris Tipler.

[Of course it was all right, Doris, and we thank you for so kindly telling us about it. It may help some one else to do something of this kind.]

Write for "Betty"

That's the name of the beautiful girl on the Coca-Cola 1914 Calendar

(Size, 13 X 32 inches)

Send your name and address and a 2c stamp (it pays part of the postage) and we'll send you Free and postpaid this beautifully lithographed and perfect reproduction of the oil painting "Betty," painted especially for us. 1914 calendar is attached.

PRIZES IN A PREVIOUS CONTEST.

To Tantalize.

(First Prize.)

You have often heard the expression, "You tantalize me." We often hear the word used. This is its origin: In olden times, when men believed in myths, this story was prominent among others. There once lived a cruel king, who ill treated his subjects, and insulted the gods, by cooking and trying to serve up to them his son. All of the gods were undeceived, excepting one, who ate a part of the boy's shoulder. The gods restored the child to life, and when Tantalus died he was sent to Tartarus, the abode of the wicked dead. He was placed in a stream of pure, cold water, up to his neck. Over his head hung all manner of delicious fruit. When he tried to drink, the water vanished. When he tried to reach the fruit, it eluded his grasp. In this position he was compelled to stay, unable to quench his thirst, or satisfy his ravenous appetite. From this story you may see that "tantalize" means to place in a trying position of worry and torment.

[Every one who imposes on others, sooner or later will suffer for it; it is only the weak and cowardly who take advantage of a fellow creature or a dumb animal.]

A True Story of a Wildcat.

(Second Prize.)

It was a warm day in November, and I was standing in the door, looking into the field, when I saw what seemed to be a very large cat. I

called my mother, and we started out here, but when it saw us coming it went into some tall brush.

We thought it had gone, but about two hours later, when the sun was shining brightly, it came out again, and began to play just like a kitten. We began to think it was a wildcat. Neither my father nor brother was at home, and so we got a neighbor boy to bring his gun. By that time the cat had started through the field, and it was easy to know that it was a wildcat.

The boy got quite close to it, and the cat faced him, creeping closer and closer, getting ready to spring. The boy tried to get behind him, but he ran to the woods, and some hunters tried to get him, but they could not find him. —Butterfly, Wis.

Friendship.

(Third Prize.)

Ada and Helen were very good friends. One day Helen said that she was "mad" at Ada. She showed it, too, and called her playmate hard names. This caused Ada to be very unhappy, because she did not know why Helen acted so.

The next week Helen was to give a party, and Ada knew that she would not be invited; she was not angry at her friend, though, and purchased a book, entitled, "Love and Friendship," and sent it so it would reach Helen the day of the party. Helen and her friends were having a good time when she saw the postman coming. He handed her a package and she hastened to open it. When she saw the book she was glad, but when she saw who it was from, she was sad. She wrote a note and sent it to Ada, asking her to please forgive her and come to her birthday. Ada was above petty spite, and came. Helen says that was the happiest birthday she ever had. —Effie Ottens.

More and more, our young folks, bless their hearts, are thinking of ways and means to help those who would otherwise not have much Christmas. The holidays have been described as a spirit instead of a season, and our girls and boys surely have caught the "spirit." There is some little time yet to help someone know the meaning of the day.

If each one of our millions of young people would bring a little good cheer into the life of just one unfortunate what a world of good would be done! Do something, children, if nothing more than to run in and shout "merry Christmas!" to some one who is old, whose family and friends have all passed over, and whom the present generation has forgotten. There are many such. Some of them have splendid houses to live in, and for this very reason they are overlooked.

People, for the most part, think that if one has every practical need fulfilled they wish for nothing else. Of all hunger, heart hunger is the worst; it may be because we so often find it among the aged, who can no longer take an active part in the world. It's coming to us—you and everyone else. Just as we sow, just so shall we reap. So let us sow seeds of love and kindness while we may.

Expert automobile mechanics get $100 to $150 a month, demonstrators and salesmen more. Good jobs are going begging—there are not enough experienced men to fill them—because the automobile industry is growing faster than men can be trained. Equip yourself for a good salary as expert mechanic or for entering the automobile business for yourself. Ours is the largest and best equipped auto school in the west, the only school in Nebraska with its large building devoted entirely to automobile training. Complete machine shops, all accessories, many makes of autos. Individual experience in large touring cars. Write for booklet.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 12. John 1: 1-18, Dec. 21, 1913

CHRISTMAS LESSON.

There is not in literature a finer example of adaptation of style to subject. The noblest and profoundest thought is here clothed in language ample and royal. What the Sistine frescoes are in art, this paragraph is in written speech. Yet with all this stateliness there is an inherent simplicity. The similarity between the opening of the book of Genesis and the opening of John's Gospel will be readily recognized. The prologue is in the form of Hebrew poetry, which consists largely of the recurrence to previously expressed thoughts, with altered phrase and added meaning. It may be paraphrased as follows: As the articulate word drops from the lip of speaker on ear of hearer, so the Messiah comes from God to man. He is the vehicle of a meaning. Not, however, an unconscious and voluntary vehicle. For the Word had an eternal existence with God. He was God from the beginning. So, far from being a mere wave of air, as an articulated word is, he is a Person; one possessing, too, infinite power and intelligence; for all things were made by I im, and apart from Him not even one thing came into being. This Logos is source of life and light for men. He kept shining by various means into the moral darkness of humanity, but it could not apprehend him. It was like a lamp trying to penetrate a fog. In the fullness of time, however, there came a herald—John Baptist—in all respects worthy of his transcendent office. His mission was to announce the coming of the Light who had already imparted something of himself to men, one by one, as they had come into the world. For he was all the while imminent in the world which he had made, although unrecognized. Now, at length, in the incarnation, he came visibly in a form most easily recognizable to a people prepared to apprehend him by long-continued and gracious dispensations. As far as the mass was concerned, however, it was a failure. In their obduracy of heart they received him not. But to such as did "take of him," appropriating him by faith as a Savior, he gave the right to become inheritors of the divine nature. Such as are begotten of God, not merely of a race (literally bloods) supposed to be privileged above others, or human nature in general (flesh), or of some particular father (man). Now comes the climax. It is a logical conclusion, transfused, with a doxology. The glorious Person whom the evangelist had described in metaphor as a word spoken by God to man, condescends to a human birth, in order that he may thus utter his Father's message. He sojourns, he tents awhile (thirty-three years) with humanity. We are eye-witnesses of this manifestation of the divine glory, a glory, a fullness of grace and truth becoming in all respects to God's only Son.

Several congressmen, notably among them being McKellar, are active in trying to get the government to regulate the cold storage combine. The remedy would be bills, which would prohibit the holding of foods in cold storage a longer period than ninety days, regulate the interstate shipment of cold-storage products and require conspicuous labeling to show the time of storing.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6466 Ladies' Night Gown.—This dainty gown is made with two small tucks at each shoulder in front and with a shallow, pointed yoke in the back. The neck is a little open above the front closing. The bishop sleeves are a trifle full at the shoulder and also at the wrist.

The pattern 6466 is cut in sizes 34 to 42 inches bust measure. Medium size requires 5⅛ yards of 36-inch material. Price ot pattern 10 cents.

5630 Ladies' Apron.—Linen, gingham, chambray or percale can be used to make this garment. It can also be used as a house dress as it is made just like one. The closing is at the left side of the front. The dress is made with a low neck and short sleeves.

The pattern 5630 is cut in sizes 32 to 42 inches bust measure. Medium size requires 5½ yards of 36-inch material and ¾ yard of insertion. Price of pattern 10 cents.

5904 Ladies' Skirt.—This skirt can be used to complete a coat suit or it can be worn with separate shirt-waists. The skirt is cut in seven gores and can be made with either the high or regulation waistline and with the inverted plait or habit back.

The pattern 5904 is cut in sizes 22 to 30 inches waist measure. Medium size requires 4⅝ yards of 36-inch material. Price of pattern 10 cents.

5991 Girls' Dress.—Serge, cheviot or linen can be used to make this dress with trimming of buttons. The dress closes at the right side of the front. The skirt is made in three pieces and the pattern provides for a removable shield.

The pattern 5991 is cut in sizes 6, 8, 10 and 12 years. Size 8 years requires 2½ yards of 44-inch material. Price of pattern 10 cents.

5231 Billy Possum.—Now is the time to make Christmas presents for the little children and here is an excellent pattern for making a Billy Possum. This possum is made with movable head and legs. Any of the furry materials can be used for the possum.

The pattern 5231 is cut in one size and requires ¼ yard of 44-inch material and ⅛ yard of 18-inch felt. Price of pattern 10 cents.

5947 Boys' Suit.—Serge, cheviot or linen can be used to make this suit with the collar and belt of contrasting material. The blouse closes at the front in Duchess style and the trousers can be finished with either leg bands or elastics.

The pattern 5947 is cut in sizes 2, 4 and 6 years. Age 4 years requires 3½ yards of 27-inch material and ⅜ yard of 27-inch contrasting material. Price of pattern 10 cents.

CONCRETE ROADS FOR THE FARMER.

(Continued from page 3.)

is not sufficiently wide to care for the faster travel, particularly when we consider that motor trucks are from two to three feet wider than the average wagon. However, only a limited mileage of roads will be needed for double track traffic. At short distances from large centers, a road may carry a large number of vehicles, but, as a rule, the bulk of traffic at a given hour is in the same direction, so that the passing of vehicles is infrequent. Sixteen feet is wide enough in such localities, for it will allow vehicles to pass at a moderate rate of speed.

Concrete, with two feet of stone shoulders on each side, will give the higher speed vehicles room to turn out for the loaded vehicles without obliging the latter to leave the concrete. The higher speed vehicles may also remain on the concrete if the speed is reduced.

As the distance from populous centers increases, traffic lessens. It also keeps more to the middle of the road and the passing of vehicles is far less frequent. Such localities will find satisfactory a nine-foot road with four-foot macadam shoulders on each side. This width will give plenty of room for vehicles to pass without getting on the earth shoulders, while the nine feet of concrete will take all the severe wear. The effect of the occasional turning out and passing upon the macadam shoulders will be very insignificant in so far as it affects the macadam.

There are also many roads which will carry very little traffic, but which must be built to keep the farmer out of the mud in order that he may get to market in all seasons. These may be of concrete eight feet wide, and shoulders three and one-half feet wide. A road similar to this was built in Winona county, Minn., under the supervision of the state highway commissioner. It is sixteen miles long and was built for approximately $7,500 per mile, or about $1,000 per mile less than the price bid on a macadam road. At Red Oak and Washington, Iowa, country roads twelve and nine feet wide were built at a cost of $1.27 and 98c per square yard respectively. Forty-five miles of state road in Maryland cost from $1.10 to $1.25 per square yard and work done in Illinois under the state department cost about $1.00 per square yard.

A concrete pavement was built in Bellefontaine, Ohio, in 1893, under specifications used for sidewalk construction. The pavement was cut into blocks five feet square. The only wear perceptible today is at the longitudinal joints, the surface of the blocks being perfect. Under the present-day practice, construction of this type is not used, and, consequently, still better results are obtained.

It is the conviction of many who have given careful study to the road problem that the farmers of the United States will eventually insist upon roads of this type. The farmers using them at the present are so enthusiastic in their commendation that it is certain to be communicated to other localities. A few of the advantages of the concrete road from the farmer's point of view are as follows:

Vastly increased pulling capacity of a team.

A smooth but gritty surface upon which horses never slip or fall.

Wear and tear reduced to the minimum.

Roads passable at all seasons of the year.

Roads that are ever free from mud and dust.

Great saving in time in making hauls.

Roads that answer for a sidewalk as well as a road.

But the economy of the concrete road itself is the great factor. Farmers in the West figure that a $6,000 a mile macadam road will cost at the very least $300 a mile for maintenance, if subject to automobile traffic. They regard a road as an investment and consider that this $300 annual outlay represents interest on $6,000 at 5 per cent, thus making the actual investment $12,000 a mile, which is the average cost of concrete roads having all the advantages enumerated above, and which, in very few instances, have exceeded $25 per mile per year for maintenance. When many miles of roadway are considered, the economy represented by concrete over macadam is tremendous. For example, let it be assumed that 500 miles of road are to be built during a period of five years at the rate of 100 miles per year, and that repairs will not be required on either type of road for two years. Beginning, then, at the third year, and estimating maintenance costs for concrete at $25 per mile per year, the total maintenance cost on 500 miles of concrete road would, at the expiration of seven years, be only $37,500. In the case of macadam, basing costs on New York and New Jersey figures, which have exceeded $900 per mile per year, repair cost would reach the enormous total of $1,350,000.

But when the explanation is made the durability of the concrete road ceases to be so astounding. It is due to the fact that the stone is held together by that tenacious and indestructible binding material, Portland cement. The Romans built roads that have lasted for centuries. Scientists discovered that their extreme durability lay in their binding material. Instead of holding their roads together with clay, rock-dust and other easily displaced binding material, such as we use on common macadam roads, the Romans used puzzolan, a form of cement that has also kept intact through centuries their wonderful buildings.

For the reason cited above, farmers are turning to concrete as the solution of one of the most vexing problems with which they have to deal. But they are not doing so on merely hearsay evidence. Their convictions are based on observation and experience of fellow farmers who have used the roads, who know what they cost, how durable they are and how thoroughly they meet the requirements of every rural community.

THE BUTTERNUT IS PASSING AWAY.

Now that nutting time is here, it is observed probably for the first time that the white walnut, better known as the butternut, is about extinct, at least in this part of the country, says the Wabash (Ind.) Plain Dealer. About all the older trees have died off, and there seems to be very few younger trees of this species. The passing of the day when the butternut was a common sight is very much regretted, especially by the schoolboy, as he hears his father tell of days when he went to the woods and gathered them by the bushel. Many of the older folk are also sorry to see these trees disappear, as the kernel of this nut is considered rather delicious, as well as very nutritious.

This tree is a native of America, and grows to a height of from fifty to eighty feet, having gray bark and compounded pubescent leaves, oblong, ribbed, green nuts which ripen in September and October. The wood of this tree is more exempt from insects than any other nut tree, thus making it valuable for shipbuilding, gymnasium stocks, cabinet work and interior finish of houses, but it is still less popular than the black walnut, which is also rapidly disappearing.

Don't Drink "Stored" Water!

from a tank that is bound to get foul, when it costs but 5c a thousand gallons for pure water "direct from well" with the

PFAU Pneumatic Water System

The Pfau pump goes direct into well and supplies constant never-failing pressure. Just like drawing water from a bubbling spring. For hard and soft water. No better farm fire protection known. *Rigidly guaranteed. Write for catalog.*

Galloway Complete Spreaders

My New, Famous No. 5 60-70 Bushel Spreader $79.50

My New Low-Down Spreader $89.50

30 Days FREE Trial

5-Year Guarantee

$25,000.00 Bond

Special No Money Down--No Bank Deposit--Keep Your Money in Your Own Pocket Offer

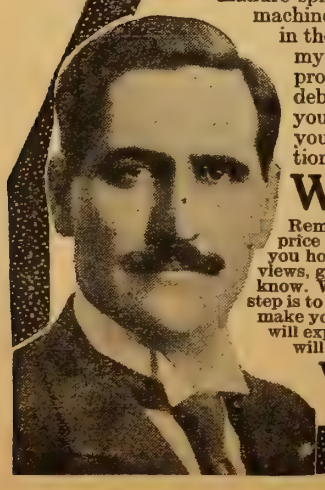
Listen! Here's a proposition that I will make you on any style Galloway spreader that I challenge any other manufacturer or firm to equal. I will ship you any Galloway spreader you select from my entire spreader line—nine different styles and sizes, and let you try it 30 days on your own farm any way you choose with the money in your own pocket. Isn't that a strictly free trial? All I ask is your bank reference—any responsible person can get a Galloway spreader on this never-before-heard-of offer. Yes, sir, and here's the kind of test you can give my machine. Test it out with heavy manure, light manure, well rotted manure, tough, strawy manure—any kind you have on your place—load it up a foot above the side boards and when you get out to the field, start your team on a trot and slam it in gear. That's a test that no other manufacturer dares to make you. But I mean every word. Give the Galloway that test entirely at my risk. The machine will stand it and never make a whimper. Now, if any competitor tells you the Galloway isn't a good machine, ask him to put one out alongside of my spreader and let you give it this "acid test." It's got to stand this test or it isn't as good a machine, is it? The Galloway has stood this test thousands of times and it has stood the test of over 40,000 users. It's not an experiment. It's a proven machine, covered by eleven special patented features that put it in a class by itself. Get my new catalog, giving all the facts. Don't buy a spreader of any other style or make until you get my new low prices.

Nine Different Styles and Sizes to Select From—

My Direct-from-Factory Plan Saves You $25 to $45

My direct-from-factory plan has saved the Farmers of America millions of dollars. Yes, sir, I am saving you and other business men farmers a million dollars a year. Because I sell everything, manure spreaders, cream separators, gasoline engines, washing machines, 19 different farm machines in all, that are made in the Big Galloway Chain of Factories, right direct from my factories to your farm. You have no middlemen's profits to pay, no salesmen's expenses or dealers' bad debts are tacked onto the prices of my machines. When you buy on my direct-from-factory, money-saving plan you pay only one small manufacturer's profit in addition to the actual cost of materials and labor that enter into the construction of the machines. And my plan backed by my immense volume makes my low priced and high quality machines possible. Try my plan. Save $25 to $45 right at the start on the best manure spreader made. The only spreader with endless apron, push board, roller-bearing feed, double drive chains furnishing power direct to the beater, adjustable features, etc. My attachment spreaders sell for $39.50 and up. My Complete spreaders for $64.75 and up. My Big Jumbo 80-bu. spreader for only $93.50 and my new, low down, semi-underslung spreader for only $89.50. Can you beat these prices? Never! Write today. Get catalog and new prices sure.

Here is My New, Low-Down, Semi-Underslung Spreader---the Best Light Draft, Two-Horse, Low-Down, Spreader Ever Built



Write for My New Spreader Catalog and Special Offer

Remember, on my plan of selling my catalog is my only salesman. It costs less than one-third the price of a Salesman's ten cent cigar to put one in your mail box. Get it. It will save you money. It tells you how Galloway spreaders are made, what they are made of, shows my big modern factory and interior views, gives you the whole facts. Facts that every business man farmer wants to know and has a right to know. We have no secrets. Get better acquainted with my money-saving plan of doing business. The first step is to send for my catalog. Then as a clincher I have a new, special co-operative, profit-sharing offer to make you that will help you get your spreader partly, or entirely without cost to you in the end. I will explain my plan in detail when you write me. A one-cent postal will bring my catalog which will save you many dollars. Send for it before you lay this paper down.

1913 RECORD **Magnificent Crops in all Western Canada**

All parts of the Provinces of Manitoba, Saskatchewan and Alberta, have produced wonderful yields of Wheat, Oats, Barley and Flax. Wheat graded from Contract to No. 1 Hard, weighed heavy and yielded from 20 to 45 bushels per acre; 22 bushels was about the total average. Mixed Farming may be considered fully as profitable an industry as grain raising. The excellent grasses full of nutrition, are the only food required either for beef or dairy purposes. In 1912, at Chicago, Western Canada carried off the Championship for beef steer. Good schools, markets convenient, climate excellent. For the homesteader, the man who wishes to farm extensively, or the investor, Canada offers the biggest opportunity of any place on the continent.

SECRETARY HOUSTON ON FARM NEEDS.

In many directions further production waits on better distribution, and the field of distribution presents problems which raise in very grave ways the simple issue of justice. Under existing conditions the farmer does not get what he should for his product; the consumer is required to pay the existing systems of distribution. No one can see offhand just what part of the burden is due to lack of systematic planning or inefficiency, economic waste, or to unfair manipulation. The report outlines the projects in this field as covering marketing surveys, methods and costs of marketing, including available market supplies in given production areas, demand at consuming centers, cold and other methods of storage, marketing systems and prices, and costs of wholesale and retail distribution of farm products. Other studies in this branch include: investigation of transportation problems and the elimination of waste in shipment, study of city marketing and distribution, study of grades, and finally co-operative production and marketing. The necessity for standardizing agricultural products as a prerequisite to proper marketing is given special emphasis. The adoption and universal application of one uniform standard for cotton would result in great simplification of all transactions, and do away with the complex methods of figuring buyers' limits. Practically the same results would follow and the same evils would be removed if standard grades for corn were universally adopted.

The individual farmer acting alone is helpless before the problems of rural credit and of marketing. Concerted action is essential. In co-operative effort, equity and justice must be kept in mind. Co-operation does not mean that an organization shall attempt to establish a closed market and to fix prices. This should be condemned as strongly in one field of industry as in any other.

It is recommended that provision be made for the establishment of grading standards for various farm products and for the promulgation of the standards already established by the department for cotton and corn grades.

Conditions vary widely in the United States. Farmers do not equally need better credit arrangements and all sections are not similarly circumstanced. The report cites the variation of the interest paid by farmers on long and short-time loans as among states and as among different sections of the same area. Among the many factors entering into these variations are climatic conditions, soil conditions, stability of industry, methods of farming, distance from markets, distance from centers of large wealth, the nature of financial agencies through which capital is secured.

When all necessary allowance has been made for these fundamental factors, it is probably clear that the rural communities are not as efficiently served as they should be by existing financial arrangements. Long-time loans are needed for permanent investments, such as the purchase price of a farm or for the erection of buildings. It is wise economy to encourage the extension of credit for safe productive use, and no less wise to discourage the use of capital along non-productive or speculative lines. The rapid increase in farm values and the difficulties in securing land has given impetus to the growth of the renting system. It is this tendency that suggests the importance of devising farm loans on terms such as will enable the producers to make the necessary payments on the interest and principal, so far as possible, from the returns of the land itself.

While there is undoubtedly a scarcity of meat the world over, yet there are great possibilities for increasing meat production in South America. The alfalfa crop is rapidly coming to the front in that country and is used very extensively for pasture purposes as well as for hay. This does not mean that the American market is to be glutted some time in the future with South American cattle, but it does mean that there is a country whose presence on the map the American feeder must recognize.

LANDS AND HOMES

Eastern Kansas Bargain

240 ACRE stock and grain farm, Linn county, Kansas. Two miles from station on main line of Frisco R. R.; 5 miles from county seat; 75 miles south of Kansas City; 120 acres in cultivation, more can be; fenced and crossed fenced; 9-room, extra well-built house; new tenant house; good barn; cattle barn; other farm outbuildings; fine water; on R. Let Me Send YOU
My Wonderful New
Galloway Sanitary Separator
On 90 Days' TRIAL FREE

I'm not asking you to buy it, understand that? **I'm not asking you to buy this separator or even promise to buy it.** I simply want to send it to you so that you can test it out right on your own farm **free. I know** what this separator of mine is. **I know** what it will do. I know that there isn't another separator in the world at any price **that is even in the same class with it. I know** these things because I have found them out **by an actual, personal investigation of the separator itself right on my own modern dairy farm.**

Why! when my own experts came to me and told me the results of their final tests on this machine on which they had been working for three years I'll confess I didn't think such things were possible. Now, *after testing the separator itself, I know that they were justified a hundred times over in every claim made.*

Now, I want to give you exactly the same chance I had. I want you to take this separator to your farm and test it in every way you can think of. Then, at the end of the free trial, if you can't honestly say: "Galloway, I wouldn't be without the machine you sent me at any price"—then just ship it back to me. *I'll pay the freight both ways—the free trial won't cost you a single cent.*

Save $25 to $50 on the First Cost Alone

If you do decide to keep the separator after the free trial, I'll let you have it at *actual factory cost* with only *one small factory profit* added. You pay no middleman's profit—I sell direct from my factory to you.

Write for My Great Special 1913 Offer

Positively the greatest offer I've ever been able to make. If you will write at once, I'll tell you how you may get one of these wonderful separators *either partly or entirely free* and without any work or canvassing either.

Cow Book FREE!

If you write at once I'll send you a copy of the great Galloway Cow Book absolutely free. The only book of its kind in the world. A complete manual of dairying for the farmer. Worth hundreds of dollars—priced regularly at $1.25. I'll send it free and postpaid together with my big separator catalog and full particulars of my great offers if you'll just send me a postal or letter RIGHT AWAY. Write today—NOW!

Geo. Burmeister, Prop., Waukesha, Wis.

SOME CHOICE HOLSTEIN BULL CALVES

WE have some choice Holstein bull calves, also some 15-16 grade bulls that we are pricing worth the money. All sired by a son of Colantha 4th Johanna Lad and out of good cows. Pocahontas Co. Home Farm, W. A. Elliott, Supt., Pocahontas, Ia.

BRED FOR PRODUCTION HOLSTEINS Herd headed by King Segis Pontiac Plus 94712. Some excellent young bulls. Nelson Bros., Stromsburg, Neb.

Pure-bred Registered
HOLSTEIN CATTLE

The Wisconsin Farmer notes that fewer and fewer of the Wisconsin farmers are content to milk and care for cows that are able to produce only about 150 pounds of butter. During two weeks last spring 145 Wisconsin dairymen purchased registered purebred Holstein sires in order to improve their herds.

Everywhere the more progressive dairymen are alive to the necessity of using **bred-for-production** sires in order to bring up the butter-fat yield of their cows to a profitable figure.

Send for FREE Illustrated Descriptive Booklets
Holstein-Friesian Association
F. L. Houghton, Sec'y, Box 113, Brattleboro, Vt.

HOLSTEINS

OUR HERD BULL, "Sir Gerben Pauline," the best butter-bred bull in Iowa. Dam's record, 33.78 lbs. butter 7 days, average test 5.24% fat. We have 15 bull calves, mostly sons of his, from one to twelve months of age. Dams are heavy and persistent milkers, many with large A. R. records
ELLIOTT BROS. - WOODWARD, IOWA.

A HOLSTEIN HERD AT BARGAIN PRICE

I WILL sell my entire herd of Holstein-Friesians nine females of breeding ages, five bulls and two young calves. They are strictly good, from the best lines of breeding, and all recorded or eligible to record. Will sell singly or in lots to suit purchaser. A low price for quick sale. Come and see them.
C. W. Barclay, Madrid, Boone Co., Iowa.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

COW EFFICIENCY.

The cow is the factor that really determines loss and gain. A good cow properly handled will give a profit anywhere. Just as the cow is an efficient producer of milk and butter fat is there a possibility of the dairy being profitable. If the cow is lacking in efficiency no amount spent for equipment or feed can make up the deficiency. The heavy producers are the only kind that make dairying prosperous.

Reports from all parts of the country prove that about one-third of all the cows are making the profit. Another one-third of the total number are paying for its feed and the remaining one-third are actually losing money. It requires no stretch of the imagination for one to realize that if all dairy cows were of the class of the upper one-third that profits would be infinitely greater. We may well suggest that it is not too high an ideal to seek to keep the cows that are paying and whose progeny would likewise be profitable.

Good sturdy Danes in their little European country have set us a good example in this respect. Not ten years after they began keeping records and testing milk from their cows, the average production of all cows in their country was actually doubled. Might we not expect to accomplish as much when systematic ways and testing is followed out on all our farms? May we not appeal to the warm Yankee blood that flows in the veins of every reader? With that may we not suggest that being Yankees and leading the world in other respects, that in this work we would soon outstrip anything that Danes or any other foreigners have done in their country?

In working for cow efficiency there are four standard features—To remove the profitless cows, to grade up the herd, use home-grown feeds that lower the cost of production and in some cases adapt the stables to up-to-date requirements. Every year improvement in those lines is to be seen. Some broad dairymen are rapidly forcing themselves to the front.

Hundreds of good men realize the importance of weeding out the inferior cows, grading up the herd, proper feeding and stables, and are ready to recognize their possibilities. If we give men such systematic and business-like methods for their use we can predict for them increased profits.

FACTORS INFLUENCING THE QUALITY OF BUTTER.

To the Editor of The Homestead:

The factors influencing the quality of butter in the various states, or even in different localities of the same state, are very much the same, said C. E. Lee, of the college of agriculture of the University of Wisconsin, recently in Buffalo before the New York State Dairymen's Association. The various grades of butter ranging in score fully ten points, is not due to the cow's shortcomings, but is directly attributed to the various methods of handling that the butter fat receives from the time it is produced until it is placed on the consumer's table.

Mr. Lee divides the contributing factors into the following divisions:

1. The farmer or the milk producer who is being constantly urged to follow better methods in handling the product is coming to realize that his primary interest is in producing milk economically. He is understanding that certain food products bear a relation to the flavor of butter. Cabbage, beets and onions, for example, have a bad influence on the flavor of butter. Ventilation, sanitation and care of utensils are important factors in turning out a high grade of butter.

2. The factory owner or manager can do his part well if the creamery is well equipped. The directors cannot place the standard too high. Very often creamery companies, co-operative as well, do not consider that there is only a certain amount of butter fat produced and that amount is not changed by the standard that may be placed on quality. It is to be regretted that a farmer can always find a market for cream no matter what the quality may be.

3. The average butter maker, who is well trained, is doing his part to improve conditions, but often meets with opposition by the officials of the company who desire to turn out a commercial rather than a good grade of butter. By means of the information gained through the scoring exhibition conducted at the Wisconsin College of Agriculture, a large number of men have been able to make butter of higher and more uniform quality. The gain has not been entirely due to greater efficiency in factory operation, but a combination of this and the education of the milk and cream producers by illustrations of exhibition work.

4. The commission trade will always buy fancy butter. It is always a credit to a factory to be able to say that a leading butter house has for years handled their entire output. If one commission firm finds that the butter is not up to standard, rather than to turn down the advice of the man who is in a position to know, the creamery should follow the suggestions offered for improvement. It must be admitted, however, that all commission firms do not demand the same grade of butter in order to satisfy their trade. This condition is a drawback to advancement. Several factores in Wisconsin are making fine butter and others a very low grade, but the returns do not always indicate a difference in quality.

5. Every consumer should at least be able to distinguish between the flavor found in a fancy article and that of the lower grades, otherwise there is not the incentive for continuing to supply the butter of high quality. The creamery industry in a measure is at fault for not educating the public as to the rich, clean, creamy flavor found in the best butter made. A student once placed a 97 score on a tub deserving of only 88 and a high score on the low grade sample. When questioned as to why he made such a mistake he replied: "The tub on which I placed the high score contained the kind of flavor found in butter I have been used to eating."

At times it seems as if the average consumer does not know good butter. It is therefore apparent that our good product must be advertised by some other method than the printer's ink. If the public demanded nothing but the fancy article, the lower grades would not be manufactured to any great extent.

Iowa is the greatest pop corn state in the Union. In fact, by far the largest per cent of the pop corn produced in the United States is grown in this state. In 1912, Iowa had 19,265 acres in pop corn, and the total yield was 647,587 bushels. Two Iowa counties produce most of the pop corn of Iowa—Sac county, which grew 328,904 bushels in 1912, from 8,408 acres, and Ida county, which grew 182,957 bushels last year, from 5,412 acres. One Ida county man has just sold his 1913 crop for $51 per acre. Odebolt, Arthur, Ida Grove, Battle Creek, Schaller and Wall Lake are recognized as pop corn centers in Iowa.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

BUNNY, THE BARKER.

A subscriber writes:

I have a new apple orchard of seventy-one trees, they have a good start, but how can I keep the rabbits from eating them up as they did one I planted in Sherborn county, Minn., three years ago? Is there any way to poison the rascals? One neighbor says, "trap 'em and eat 'em," but I don't like such cat-like meat. What's the easiest way to save my trees?

This is a sample of the inquiries which are due at this season. The question of rabbit protection for orchards is of perennial interest, for numerous orchards are planted each year and legions of barkers are born each year.

The dangerous contact of rabbit, and apple tree is apt to be in the first few years of the tree's life, for the stretching capacity of bunny's jaw is limited and when he can no longer reach about the trunk he is unable to injure it.

It is a pity that our friend does not like rabbit meat, for with traps and gun, he might supply his table and thus cut into the "high cost of living." When steak is 25 cents per cut it is a shrewd business to check the consumption at every possible corner. We advise that you try to like rabbit. Have the Mrs. roast one, just as she would roast a chicken with an oyster dressing. Then just before putting in the oven tie on the outside three good slices of bacon or pickled pork. Cook it in this way and then if you don't like it send it to us, we'll eat it.

Yes, there are a thousand ways in which you may protect your trees and carry them through the winter with absolutely no injury.

Some successful rabbit fighters use poison; some apply a protective to the tree; some destroy the enemy by trapping and others when the cotton tails are as thick as cotton bales in Mississippi combine all the plans suggested. And let us suggest that when the enemy is present in mighty force it is hardly safe to rely upon any one line of defence.

There are a dozen kinds of tree protectors sold; buy them if you have plenty of money. If not make your own. A heavy newspaper wrapping tied at top and bottom fitting close at the surface, is just as good as anything. But you should remove it next spring when the danger season is over. Small hay or straw ropes wound thickly about the tree answers the purpose. And we might go on to name fifty devices in the line of guards. There are various kinds of smears so offensive to the delicate nostrils of Br'er Rabbit that he will not touch the tree which has been doped. Asafetida is the ingredient relied upon to disgust him and it is to his credit that it is effective. But do not combine this perfume with lard or any oil; those things are bad for the tree; use it in whitewash. One application will do as long as no heavy rain storm comes. And as rains are not frequent in your section during winter one smear will be likely to do the job for you.

You may easily poison the hungry jumper, by strychnine fed on sweet apples. Cut the apple into little cubes of a half inch, sprinkle the poison in powder form all over it. Impale each piece upon a sharp pointed stick a foot long and set them up in the snow or earth along the runways. If you persevere in this effort at death you will destroy all who come to your premises.

Other ways of using poison will readily occur to you and any plan which induces bunny to take his dose will succeed.

When you come to trapping the devices are innumerable. The figure four is reliable, baited with an ear of corn upon the trigger, it usually catches the victim. Prepare your trap and throw down a few apple branches, fresh cut, to induce your guests to gather there.

To intelligently feed fruit trees, it should be ascertained what the soil is capable of doing for them. If assistance is required, it must be given. A soil may be deficient in potash, or in phosporic acid, or in nitrogen. If the trees are making quick growth, and the foliage has a deep green color, and the wood matures, it is evidence that nothing further need be done. But if there is a sluggish growth and the foliage turns yellowish, the trees are not receiving sufficient food. In case the soil is not mellow and friable, it should be made so. A lumpy, coarse soil can be improved by growing some cover crop, as cowpeas, or rye, or by the use of barnyard manures, which should be plowed under in spring.

OUR SHEEP DEPARTMENT

THE sheep industry has been a neglected one in the corn belt, but it is now coming unto its own. The general introduction of the woven wire fence has made it easier for men to keep sheep and we propose from this time on to make this one of the strongest departments of the paper. We have recently secured the consent of a few practical sheep breeders to contribute articles on seasonable topics and to answer all inquiries relating to the industry. Every man who is at all interested in sheep is invited to ask questions or to contribute matter pertaining to any phase of the industry.

WINTER IN THE SHEEPFOLD.

To the Editor of The Homestead:

Sheep should go into winter quarters before the frozen condition of the soil renders succulent grazing less palatable and nourishing. I like to allow the breeding ewes to run on the pasture and stubble lands as long as the weather is dry and favorable, for I think that the small amount of grass and waste feeds obtained helps to modify the sudden change from pasture and forage crops to dry feed. By feeding generous rations of dry roughage and grain foods the grass and forage that has been more or less affected by freezing will have no injurious effects upon the digestive systems of the animals. If the sheep are allowed to run out until cold weather comes and are then put on dry feed, without any previous preparation, there is more or less danger of impaction, brought about by the arrest of the natural functions of the digestive secretions.

Sheep are tender and easily discouraged, and for that reason it is clearly to our interest to avoid all influences which will tend toward digestive derangement and see that they are carefully guarded from storms and bad weather. When the weather is pleasant they seem to derive great benefit from a run in the fields and pick up more or less food that is beneficial as well as to secure stamina from the exercise and stimulating air. The winter rations, however, should be fed just the same as though they were kept in the barns and yards.

Breeding ewes cannot thrive under too close confinement. We cannot obtain a maximum number of healthy, well-developed lambs unless the ewes are maintained in a good, healthy flesh condition during the time they are pregnant. As a rule the ewes that have suckled robust lambs during the previous summer are somewhat reduced in flesh condition and vitality; consequently they must have the best of care and generous rations of the right kinds of food to develop strong and vigorous lambs. Many times ewes that are in poor flesh condition will bring healthy and robust lambs and still be unable to supply them with the necessary nourishment to keep them in a thrifty condition. It surely pays every flock owner to devote special study and attention to maintaining his ewes in good flesh, not only because of its influence on the health of the ewes themselves, but upon the growth and development of the unborn lambs.

By handling the flock quietly and carefully during the time they are kept inside many of the troubles experienced during the lambing period may be avoided. One should try to gain the confidence of the ewes as soon as possible after they are brought into the winter quarters, so as to avoid crowding through openings or jumping over obstacles in the barns and yards. Some of the most successful flock owners are able to go among their sheep and catch individuals they desire to show without the least difficulty.

One cannot give too much attention to arranging the yards and barns so that the ewes will not be compelled to crowd through any narrow openings or alleyways. Ewes that are heavy with lamb are frequently injured by overcrowding or being compelled to go out and in the barn through narrow openings. Another complaint caused by overcrowding of the ewe flock is colds and catarrh. When the weather is favorable for the flock to run in the yards, overcrowding frequently results. As the temperature in the barn rises the sheep begin sweating, and when they are turned out the sudden change in temperature causes colds which finally result in catarrh. As a rule I like to keep my breeding ewes in small bunches of from twenty to forty members. With large, open-wool sheep it is seldom profitable to keep too many confined in one flock.

Sheep are not subject to many winter ailments that cannot be prevented if proper precaution is taken in arranging the barns and yards and in feeding suitable foods in the right proportions. If we neglect these factors we are simply inviting and fostering the very ailments that will destroy the most promising flock. Overcrowding, overfeeding and irregular feeding, want of plenty of salt, water and pure air and undue exposure to dampness and storms are prolific sources of trouble during the winter months. One of the best treatments for sheep that are suffering from common winter ailments is a purgative. Few flock owners appreciate the value of Epsom salts or pure raw linseed oil in reducing fever and inflammation. If it is advisable to give sheep a stimulating medicine of any kind, a purgative is the most beneficial.

One of the most insidious winter ailments is colds. A cold at the beginning does not produce any serious ailment, but as it gets a gradual foothold it develops into more serious ailments that use up the body tissues and weaken the whole system of the affected animal. Catarrh, that follows a severe cold, consists of inflammation of the mucous membrane of the throat, nostrils, windpipe and sinuses of the head. In case the disease gets thoroughly established, good nursing, comfortable housing and nutritious food will help to give the animal the necessary vitality to regain its normal condition. This is the only successful method of treating colds and catarrh,

Few flock owners realize the tremendous losses incurred by parasites during the winter. As a rule these external parasites are unusually active during the winter; the dense fleece of the sheep is an ideal place for them to live and reproduce in great numbers. As the parasites multiply the sheep become restless and begin to rub against the corners of the feed racks and partitions in the barns. There is but one method of treatment, and that is to eradicate the evil. If any of the animals show indications of being affected with the trouble in the fall they should be dipped before they are put into winter quarters. If the barn and feed racks become infested much trouble will be encountered in cleaning out the pests. There is no danger in dipping if a warm day is chosen and the sheep as soon as dipped, are put into a barn and kept away from drafts until they are dry.

Sheep must have plenty of nourishing food, especially the breeding ewes that are supporting a growing fetus. A roughage ration is not sufficient. Oats, barley and corn, mixed to meet the varying needs of the flock, make an efficient grain ration. For a roughage ration clover, alfalfa and mixed hay supplemented with roots or corn silage will afford both variety and succulence, which are essential in stimulating appetite and inducing consumption.

L. J. Meredith.

COAL Direct From The Mines

Keep Dealer's and Jobber's Profits In YOUR Pocket

DO you know that wherever you live *you* can now buy coal straight from the mines at wholesale prices, the prices your *dealer* has to pay?

Do you know that this winter you can save from $50 to $100 on your coal supply—have it delivered promptly—the cleanest, best heat-producing coal you ever used?

It is literally throwing your money away and adding to the high cost of living *with a vengeance* to continue to pay local prices for coal.

Our great mines near Vincennes, Indiana, produce enormous quantities of the finest coal in the country—the coal that is famous for its remarkable heat unit efficiency. We ship everywhere direct from mines in carload lots this splendid guaranteed fuel.

Tecumseh Coal

Save $50 to $100

on your winter's coal supply. We know that seems too good to be true, but it is an absolute fact that hundreds of people far and near are already buying Tecumseh Coal from us at wholesale and making this marvelous saving.

Not only is Tecumseh the best heat giving coal—but it is *all coal*—cleaned at the mines by the most perfect system ever installed.

No matter how big your coal bills have been in the past—no matter how much you have fattened the jobber's and dealer's profits—the time to turn your back on the old costly round-about way of buying is now. Begin with *this* winter to make this real saving.

It is plain common sense for you to save money by dealing *direct with the mines*. You owe it to yourself to find out the facts and prices—to learn more about Tecumseh Coal. All we ask is the opportunity to quote you prices—to prove in actual figures the splendid saving you can make.

This should interest you whether or not you intend to buy a full car of coal.

Club with Your Neighbors

If you cannot use a whole car—25 to 40 tons—you can easily arrange with your neighbors to divide up the shipment and still make this handsome saving on your winter's coal.

This money-saving plan is too important to be set aside. The amount of waste money you have been paying your dealer belongs in your own pocket. Keep it there. Right now take the first step. It obligates you to nothing. Just fill out and mail us the coupon in this advertisement. The prices we quote will positively surprise you. But do it now before the matter slips your mind. Address

NEWS OF THE SALE RING

Robisons' Percheron Sale.

The offering of Percheron horses at Leslie Farm, Pekin, Ill., December 10th, by A. L. Robison & Sons drew a crowd of 1,000 people and the high-class offering presented was taken at prices that, while conservative, yet represented a good margin for the makers of the sale and yet placed the horses in the buyers' hands at figures that cannot fail to make them very profitable investments. While the general average of $486 made on the thirty-eight head sold does not look large, it must be considered that included in the list were fourteen head of weanlings and yearlings that had not arrived at the age to sell to the best advantage and kept the average down. It was a quality offering throughout. The father of the senior member of the Robison firm located in Illinois in 1836, and soon afterward engaged in the breeding of Percheron horses, an industry that has been carried on at Leslie Farm continuously down to the present day. The majority of the sale offering was bred on Leslie Farm and represented the richest breeding known to the breed. The blood of Powerful, Seducteur, Rabelais, Hisse Hunt and Moulinet, the great sires that have been used at Leslie Farm, predominated and no Percheron sale ever presented a better bred lot of horses. The imported mares in the offering received ready appreciation. There are few establishments that have behind them so long or so clean a record as Leslie Farm. Conducted on progressive lines, with the strictest integrity, it is today one of the great constructive breeding farms of the country and the buying public knows that it is getting honest values from an honest firm when it deals there. The horses went to buyers from Ontaria, New York, Pennsylvania, Ohio, Indiana and Illinois, with bidders present from several other states. The top of the sale was $1,250, paid by the Southern Illinois State Normal School, Carbondale, Ill., for the imported mare, Koudrelle, reserve champion at the 1913 Illinois State Fair, the same buyer paying $1,080 for the imported mare, Icarienne, the contending bidders being P. W. Wickham, Alexandria, S. D., and Len Small, Kankakee, Ill. At $805 Chas. E. Flora, Camden, Ill., secured the beautiful two-year-old Robison bred mare sired by Rabelais, and Fred C. James, Jeffersonville, Ohio, paid $800 for Veda, another outstanding daughter of Rabelais, both mares being bred to Moulinet, the great sire at the head of Leslie Farm stud. Len Small, Kankakee, Ill., secured excellent value in the imported mare, Kriblure, at $705, and Isaac Argenbright, Blandinsville, Ill., got a beautiful pair of young imported mares in Krimee and Kausse at $1,250. There was a good local demand, as is always the rule at Leslie Farm sales, evidencing the high esteem in which the Messrs. Robison are held by their neighbors. The sale was conducted in the thorough and high-class manner so characteristic of Leslie Farm events, and the management established itself more firmly than ever in the esteem of the public by the way in which the sale was handled. Col. Carey M. Jones did a most effective day's work, and was ably assisted in the ring by Colonels Brown and Seeley. The following is the detailed report:

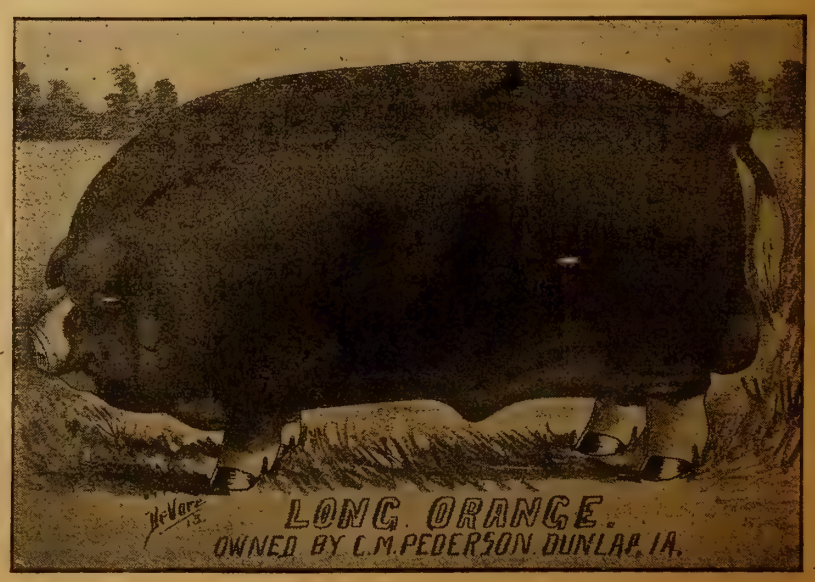
Corsa's Percheron Sale.

The annual offering of Percherons at Gregory Farm, White Hall, Ill., December 9th was largely attended, buyers being present from New York, Pennsylvania, Ohio, Illinois, Mississippi, Nebraska, North Dakota and South Dakota. The reputation of Gregory Farm as a great breeding institution is so firmly established that it is only necessary to announce a sale there to attract buyers from all points. The value of a great sire is strongly demonstrated at Gregory Farm. Not only was Carnot a champion of champions, but he is transmitting to his offspring the same outstanding qualifications that carried him to the front and at all the big shows during the last two years since his colts have become large enough to show, they are carrying away the big share of the honors. There was strong demand for his get in the sale, and the nine head sold, eight fillies, suckers to yearlings, and one yearling stallion, made the excellent average of $681. The majority of the mares in the sale were bred to Carnot, a fact that added largely to their value. The top of the sale was $1,050 paid by Frank M. Shaw, Oneida, Ill., for the three-year-old mare, lady Christine by Casino, and bred to Carnot. P. Wickham, Alexandria, S. D., one of the most reliable and discriminating stockmen in the country, paid $950 for Carnorine, a yearling daughter of Carnot, and $825 for Carnona, another yearling filly by the same sire. Two yearling daughters of Carnot, Carniburge and Queen Carnot, went to Thos. Kellebrew, Nebo, Ill., at $605 each, and J. C. White, Brandon, Miss., secured excellent values in four Carnot fillies, Carneito, Cartilly, Cartie and Carlante, suckers to yearlings, at prices ranging from $450 to $825. Mr. White is doing missionary work in his state in the interest of the Percheron and he is



Long Orange the splendid son of Big Orange. The sire of the good boars offered for sale by C. M. Pederson, Dunlap, Iowa. See advertisement on page 39.

certainly getting the right kind of seed. Mr. Williams, manager of George W. Elkins, Jr.'s, Folly Farm, at Abington, Pa., secured seven head of young mares at very conservative figures. The top for stallions, $995, was paid by E. F. Eberly, Hampton, Neb., for the two-year-old imported Lebon, at which figure he is a decidedly good investment. Mr. Eberly also took Carvotte, a yearling son of Carnot, at $860 and Kouson, an imported three year old at $775. Like all sales at Gregory Farm, this one was conducted in the most admirable manner. Mr. Corsa is a gentleman of the highest honor, a fact long since learned by the public and he carries on his business in a manner that makes him both friends and customers. Colonel Woods, Jones, Branson and Seeley were the auctioneers and the following is a detailed report of the sale:

FEMALES.

Cornorine, foaled 1912; P. Wickham, Alexandria, S. D.	$ 950
Carnelto, foaled 1912; J. C. White, Brandon, Miss.	825

Trumans' Sale of Shire Mares.

The sale of imported Shire mares at Trumans' Pioneer Stud Farm, Bushnell, Ill., drew a very large crowd, and those present were afforded an opportunity to place values upon one of the best lots of mares yet presented at the Bushnell establishment. The average of $548 made on the sale does not represent the full value of the offering, as many mares were taken at very conservative prices. The top of the sale was $1,000, paid by J. E. Cross, What Cheer, Iowa, for the three-year-old Normandy Sweet Briar, in foal to the International champion, Lockinge Hengist. The majority of the mares in the sale had been covered by this stallion and added value was given each one from the fact that the day preceding the sale Lockinge Hengist had been sold by the Messrs. Truman to George Stoll, a progressive young farmer and horse breeder at Chestnut, Ill., for the record price of $11,500. H. B. Smith, Bardolph, Ill., paid $975 for the four-year-old Gem, also in foal to Lockinge Hengist. George Schaffenacker, Chestnut, Ill., got exceptional value in Trumans' Coldham Princess at $825, this beautiful young mare being a daughter of the grand champion Shire mare at this year's International. One of the best values in the sale was the three-year-old Laithwaite Rose, in foal to Lockinge Hengist, that went to O. H. Stoops, Terhune, Ind., at $700. Like all affairs at the Pioneer Stud Farm the sale was conducted in the most satisfactory and honorable manner, and the mares sold were of such outstanding merit that they cannot fail to prove desirable investments to their owners. Col. Carey M. Jones did the selling in his usual effective manner, ably assisted in the ring by Col. B. H. Keck, the sale averaged $548, and the following is the detailed list:

MARES AND FILLIES.

Normandy Sweet Briar, foaled 1910; J. E. Cross, What Cheer, Iowa	$1,000
Fleet Rose, foaled 1909; Fred Bonner, Canton, Ill.	450
Vita, foaled 1910; Elmer Carlton, Owaneco, Ill.	485
Springfield Cosy, foaled 1911; Jones McGrew, Walnut Grove, Ill.	400
Maryshall Merry, foaled 1911; W. D. Fraley, Taylorville, Ill.	480
Clawson Blossom, foaled 1908; Chas. Lindquist, Essex, Iowa	700

Tuontree Pink IV, foaled 1908; Fred Bonner	325
Laithwaite Rose, foaled 1910; O. H. Stoops, Terhune, Ind.	700
Moulton Double Daisy, foaled 1912; L. M. Tate, Kansas, Ill.	425
March Gertrude, foaled 1908; Chas. Lindquist	400

The Oldsen Short-horn Sale.

An unusually large crowd from all parts of Iowa attended the C. A. Oldsen Short-horn sale at Wall Lake, Iowa, on December 10th and he made a splendid sale, the entire offering averaging $180.97. The top of the sale was Ceremonious Pigeon, a daughter of Ceremonious Archer, and she went to J. T. Judge, Carroll, Iowa, at $280. The cattle were in excellent condition, and were appreciated by the large crowd that was present. In no sale this year has there been more evidence of the demand on the part of the public for cattle than was exhibited in this sale. In fact there was not near enough bulls to go around, and he could have sold many more females had they been offered. Col. Fred Reppert cried the sale, assisted by Colonel Teaquist in the ring. Below we list the entire offering:

FEMALES.

Ceremonious Pigeon, calved March, 1907; J. T. Judge, Carroll, Iowa	$280.00
Snowball, calved December, 1911; Cahill Bros., Rockford, Iowa.	155.00

Fern, calved May, 1912; Arthur Smith	142.50

BULLS.

Red 388535, calved November, 1912; W. F. Lindsey, Aurelia, Ia.	175.00
Perfection 388534, calved October, 1912; Rasmess Hansen, Renwick, Iowa	180.00
Cyclone 388532, calved October, 1912; Gearke Bros., Aurelia, Ia.	195.00
Chief 383769, calved July, 1912; Andrew Erickson, Wall Lake, Iowa	170.00
Wavelands Pride 383771, calved August, 1912; John Barrett, Paton, Iowa	255.00
Victoria's Duke 383770, calved August, 1912; F. R. Shurtliff.	160.00
Royal Lad 388536, calved December, 1912; Will Pepper, Wall Lake, Iowa	165.00
Dandy 388533, calved October, 1912; Amos Peterson, Denison, Iowa	165.00
Bill 388531, calved October, 1912; Will Albright, Wall Lake, Ia.	150.00
Remsen 388679, calved October, 1912; John Wagner, Odebolt, Ia.	150.00

SUMMARY.

10 bulls	$1,760; average	$176.00
26 females	4,755; average	182.82
36 head	6,515; average	180.97

The Richardson Short-horn Sale.

The attendance at the J. A. Richardson sale at Wall Lake, Iowa, on December 9th was the largest that he has ever had since he has been breeding cattle, and the outcome was entirely satisfactory. Seventeen bulls averaged $153.83 and twenty-three females averaged $144.11, the average on the forty head being $148.24. The attendance of breeders from far away was very marked and they bid as though they wanted cattle. The top of the sale was the great young bull, Red Knight Jr., an outstanding good young Matchless bull and he went to John Rasmess at $305. Col. Fred Reppert cried the sale and did good work and was assisted in the ring by Colonels Lee, Teaquist and McLaughlin. Below we list those selling for $100 and over:

FEMALES.

Marchoness 46th, calved May, 1909; Cahill Bros., Rockford, Ia.	$155.00
Lady Marchoness, calved January, 1912; Christian Peterson, Dayton, Iowa	200.00
Eliza 18th, calved October, 1909; G. W. Cline, Pilot Mound, Ia.	150.00
Dora, calved July, 1909; Clayton Hauseman, Armstrong, Iowa.	192.50
Eliza, calved December, 1912; S. Green, Woodbine, Iowa	115.00
Queen Butterfly, calved June, 1907; Ed Huffman, Ida Grove, Iowa	207.50
Butterfly Star, calved June, 1902; S. Green	105.00
33d Scottish Lady, calved April, 1905; W. H. Meyers, Vail, Iowa	165.00
Cook's Butterfly, calved May, 1910; Cahill Bros.	200.00
Beauty 2d, calved February, 1912; G. W. Cline, Pilot Mound, Iowa	125.00

SUMMARY.

23 females	$3,314.50; average	$144.11
17 bulls	2,615.00; average	153.83
40 head	5,929.50; average	148.24

As per previous announcements in this paper, J. A. Sage, Ankeny, Iowa, sold Shire stallions and mares at public sale on December 9th. He disposed of seventeen head at an average of $495 each. The top price of the sale was obtained for a six-year-old stallion, Brown Prince, that went to Wm. Beck, Lehigh, S. D., at $925. Among the purchasers were Roy Alleman, Alleman, Iowa; John Schonhorst, Slater, Iowa; Charles Hildreth, Ankeny, Iowa; F. E. Bush, Dexter, Iowa; R. Peterfish, Ankeny, Iowa; Lloyd Howard, Ankeny, Iowa; Linc Hillis, Ankeny, Iowa; C. R. Sydness, Slater, Iowa; Lee Bros., Slater, Iowa, and Art Hildreth, Slater, Iowa.

A fair gathering of cattle men were on hand at the sale of Short-horns made by Blank Bros. & Kleen, at Franklin, Neb., on December 10th. A lot of really useful cattle were sold and they did not bring a range of prices in keeping with the real value offered. Feed of all kinds is scarce in southern and western Nebraska this season and no doubt this fact tended to bear down on the prices, yet it seems at the range of prices at this sale, one would have been enabled to make investments that will be really difficult to duplicate. The cattle were too thin in flesh to be appreciated and consequently the average of $75 is reported. This, however, includes many calves. Ernest Shoebotham, Fairbury, Neb., was the strongest buyer of the sale, getting six head. Dyer Bros., Franklin, each took several head. A. C. Shallenberger, Alma, Neb., paid the top of the sale. H. D. Duncan did the selling.

A man who gives more than just ordinary attention to poultry on the farm uses steam pipes to warm the buildings in winter. This poultry keeper has made a success and ships sixty to seventy dozen eggs to a nearby city every week. Hardly 1 per cent of the farmers would be successful. However, it shows what is possible, by close attention to details, and the determination to win out.

Live Stock and Commercial Field Notes

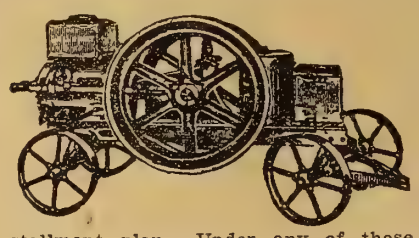
Collected by Representatives of The Homestead

THE dispersion sale of the Spring Lake herd of A. J. C. C. Jersey cattle, takes place Wednesday, January 7, 1914, at Palmyra, Wis. This great herd of nearly fifty pure-bred Jerseys, has been developed through forty years of persistent breeding on this farm. For the past twenty-one years Mr. Wm. Weis has owned the farm and herd, and his energies have been directed toward building up a great producing herd. This he has succeeded in doing and he has accomplished this through the use of the many fine bulls he has used. He has not purchased a female in the twenty-one years which makes the whole of the present herd of his own breeding, and of great blood lines. The offering consists of seven aged cows, seventeen cows two to six years old, nine heifers, eight heifer calves and three bull calves, two herd bulls. A more evenly developed herd would be hard to find for with but one exception the top lines are straight, and carry out exceptionally well at the tail head. The udders on the milking females are typically Golden Fem, being long, and square built, with teats of good size, well placed. As they are all American-bred and are not too closely descended from the imported stock, they are very good size. The years of careful selection and breeding shows on them strongly, for in over twenty years there has not been a "questionable" bull used. Among the bulls used on this farm during the past decade and ones which appear repeatedly throughout the pedigrees are: Commodore Tormentor 27938, Olymphs Koffee 20087, Pogis Koffee 36413, Farmer's Sow 28014, Bill McRiotee 46397, Delias Volunteer 67737, Belle Mays Prince 70265, Major Marion 6922, Duke of Bloomfield 1544, Count's Commander 101193 and Idas Osiris 82850. As will be recognized these are from the great Pogis, Golden Fern and St. Lambert strains and in many cases they were strongly line bred. There are two herd bulls in this offering, both a trifle over two years of age. One of these, Brookfield Financial Count, is a show animal, and would be a worthy entry for state fair honors. He is a son of Brookhiel Financial Count, second prize winner at the Wisconsin State Fair where he was beaten only by the noted bull, Cora's Majesty. On his sire's side he is of Golden Fern and Flying Fox breeding, being a great grandson of Brookhiel Fox the $5,000 bull, and of Financial Countess, which made 111 pounds butter in thirty-five days and 935 pounds in a year. His dam, Golden Fern's Marie, is of Golden Fern and Pillotta breeding, being a daughter of Pedroc Golden Fern and Pilotta's Flossie. The other herd bull which is also a junior two year old is Volunteer's Darby 999088. He is a grandson on dam's side of Commandor Tormentor and his sire is Delia's Volunteer, a grandson of Ida's Rioter of St. Lambert. Such noted bulls as Commander Vexie, Doris Pogis, Lord Victor Pogis and Rioter's Victory, appear in his pedigree. Palmyra, Wis., is located forty miles west of Milwaukee and northwest of Chicago. It is very easy of access, as there are eight trains daily on the C. M. & St. Paul going both four east and four west. The trains going east arrive at 7:45, 8:15, 11:55 a. m., and 5:30 p. m. Going west they arrive at 9:15 a. m. and 2:20, 5:45 and 8 p. m. The farm is located at the edge of the village and is but ten minutes' walk from the station. It is a truly worth while offering, and will pay those interested in pure-bred Jerseys to attend the sale or send mailed bids. See advertisement of C. W. Mack & Son on page 26.

TAYLOR & JONES, Williamsville, Ill., write: "Our new importation of draft stallions will be shipped in a few days. These will crowd us somewhat for room and in order to dispose of some of these we already have, we are willing to make reduced prices on anything we have in the barns. If you are planning to buy, it will pay you well to come and select what you want and get the advantage of this special price. With each horse goes our written breeding guarantee and we can also guarantee him to live for you, thus making you absolutely safe. Our horses are all doing well and we are glad to say our sales are quite good. Write us your needs, if you cannot come, and let us try to fit you out." See page 35.

WISCONSIN Berkshires have demonstrated the fact that they are just as good as those of other states. They are capable of holding their own in show rings, and better than that, they tip the scales at a money-making weight when they go to market. In his advertisement on page 39 M. A. O'Brien, Reedsville, Wis., announces that he has for sale a lot of good, growthy, typical Berkshires and that he will quote very reasonable prices on them. The O'Brien herd has a record of putting barrows into the market at an early age and with a wonderful uniformity of growth and finish. Buyers will do well to look him up before making their selections.

DIRECT-FROM-THE-FACTORY plan of buying gasoline engines may easily effect a saving of from $50 to $300. This applies to the line of engines advertised by Galloway on page 13 of this paper. The accompanying illustration shows one of the popular Galloway pumping engines on trucks. The manner in which the Galloway engine is manufactured and the guarantee under which it is sold, makes it absolutely safe for anyone to buy. Galloway has no salesmen. He sells everything direct to the farmer and on terms which enable any farmer to buy. These terms are liberal and the buyer may have the choice of five different plans. In the first place there is plan No. 1 where the buyer pays cash with order. This is really the cheapest plan where there is cash to carry it through. A second plan provides for a bank deposit; a third gives the buyer the privilege of paying half cash and half note; a fourth in which full settlement by note may be made; and a fifth in which the Galloway customer may buy on the in-



stallment plan. Under any of these plans the price is made just as low as it can be and justify the good engine sent out. In every instance a certificate of guarantee accompanies the purchase, and this is backed up by a guarantee bond of $25,000, which is placed in a bank at Waterloo, and from which may be drawn a forfeit caused by lack of merit in the engines. But the Galloway engine is not the only article that may be bought at money-saving prices. Manure spreaders, cream separators, and in fact every machine or article used on the farm or in the home is supplied by the Galloway Company. Catalogs of each may be obtained by filling out the coupon in the big advertisement and forwarding it to Wm. Galloway Company, 15 Galloway Station, Waterloo, Iowa.

CHOICE Poland China gilts for sale.—Those of our readers who want to buy some good large-type gilts at private treaty should read the advertisement of W. T. Dubois, Greenville, Iowa, on page 39. He is offering twenty-two head for sale, most of which are sired by his two splendid boars, Collosso 2d and D.'s Wonder. The former boar is a two year old and is the sire of most of the young things now on the place. He is a son of Colosso by Hadley Expansion by Dorr's Tecumseh and his dam is Molly Fair 6th by Chief Leader by old Chief Price. As his pedigree will indicate he is a big-type boar, wonderfully smooth, deep in body, good bone and back and a good head for a large-type boar. This boar is a good breeding hog and he puts a good back on everything he sires, together with good feet and legs and nice coats. His yearling boar, D.'s Wonder is a son of Ellerbroek's A Wonder and he is out of a dam by Fesenmeyer's A Wonder, making him a double bred A Wonder boar. Here is a boar that is destined to be one of the largest boars in northern Iowa when grown out. He can easily make this hog weigh 1,000 pounds when matured. He has the bone, the depth and the size that they are all after, and a sow bred to him is all right. Mr. Dubois is offering nine head of Colosso 2d gilts bred to this boar and some D.'s Wonder gilts bred to a son of Colosso 2d. The gilts that he is offering for sale are out of such sows as Mollie Miller, bred by John Miller, and she is a daughter of Miller's Chief Price; U. S. Monarch by Monarch 2d, he by the 1,000-pound boar, Monarch Jr.; Cedar M. by Monarch 2d and Young Lady, a granddaughter of Tecumseh Longfellow. You will, therefore, realize from this line of breeding he has a nice line of big-type breeding. He will not hold a winter sale and he is, therefore, going to offer these gilts at private treaty, write him for prices and description at once and kindly mention The Homestead.

WESTERN Nebraska boasts of many of the finest herds of pure-bred stock within the state and among them the Short-horn herd owned by E. W. Crossgrove & Son, of Farnam, must take high rank. This herd has been built from a modest beginning and today is the pride of a county. The elder Crossgrove came to Farnam in an early day and has of a truth grown up with the country. A country is just as progressive as its citizens and measuring by this standard, Farnam is the center of a mighty high-class lot of country. At this point one of the best farmers' institutes of the state is held annually. The prime moving spirit of all these affairs has been Mr. Crossgrove. He has brought the best seed stock to his farm that he could find. Not only in the way of Short-horns and Durocs, but also in the way of field and farm seeds. It is more of the Short-horns that we wish to write today and we want to say that it is a treat to an old-time cattle man to visit this herd. There are good herd bulls in use and the breeding herd is made up of as fine a line of producing cows as one will find. The present herd bulls are Nonpareil Victor 2d and Allendale by Combination. The former is a massive roan with every characteristic of the prepotent sire. He is a big bull and smooth considering his years, and is a wonderful handler. He is eight years old. The young bull is strong in the blood of Whitehall Sultan and shows in every line the wonderful prepotence of his grandsire. None of his produce are yet in evidence, but he should prove well. Crossgrove & Son will make a draft sale of Short-horns on March 11th. Some fine specimens of the breed will be presented and they are now in nice condition. Further announcements of the sale will appear in The Homestead from time to time.

DUROC JERSEY hogs bred from stock that has made good wherever it has gone are the kind J. E. Weller, Faucet, Mo., breeds and sells. For ten years Mr. Weller has stuck to the big, stretchy kind and boars he has sent over a wide range of territory have made many friends for his herd as is shown by the testimanials given in a pamphlet he has issued regarding his herd. Just now Mr. Weller is making a special drive on a great string of Duroc boars of last March farrow. These boars have plenty of size, as they measure from fifty to fifty-three inches in length, have good heavy bone, plenty of quality, exceptionally good heads and excellent coats. They are ready for service and will make good. At the price Mr. Weller puts on them they are decided bargains. They furthermore are well bred, being by E Pluribus Unum, a La Follette-Malcom Model boar, and Crimson Rambler, a grandson of the immortal Crimson Wonder. Their dams are by such sires as Crimson Wonder Again, Ambition, Crimson Rambler, Tip Top Notcher, etc. Mr. Weller has a large herd and raises over 100 head of spring pigs each year which enables him to furnish a large number of good boars. His herd has done well this year and his young stock has made a good growth. For use on his E Pluribus Unum gilts Mr. Weller has just purchased of J. E. Smith, Iowa, a son of Crimson I Am, he by the champion Crimson Wonder I Am. These gilts will be offered as soon as bred. Just now Mr. Weller is making a special drive on those boars of early farrow, as is seen in his advertisement on page 33. When writing Mr. Weller kindly mention this paper.

FARMERS not infrequently fail to recognize the difference between economical necessities and absolute necessities. The use of fertilizer is an economical necessity because it not only helps to maintain the farm fertility, but it assists in the establishment of a permanent degree of productiveness that adds to profits. A book which demonstrates this fact fully may be obtained without cost by any reader of this paper who writes for it to the American Agricultural Chemical Co., Boston, Mass., or any of the addresses given in the advertisement on page 29.

CROP reports from Western Canada indicate a splendid record for the year 1913. The average yield of wheat was thirty-five bushels and in many instances it ran up as high as fifty bushels per acre. Particulars with reference to land which is open to homestead entry may be learned by writing to Frank H. Hewitt, 202 W. 5th St., Des Moines, Iowa; W. V. Bennett, Room 4, Bee Bldg., Omaha, Neb.; R. A. Garrett, 311 Jackson, St., St. Paul, Minn.. See advertisement on page 25.

FEBRUARY 17th is the date for the Short-horn sale that will be made by Jas. Leahy and M. A. Swain, Ewing, Neb. In this sale these gentlemen will sell about fifty head and they expect to make this the best offering of Short-horns that have been sold in their section of the state. Certainly they are offering good breeding, having in use or represented in their herds some of the best bred bulls of the different herds of the West. A son of Gondomar has been used extensively and with excellent results. Likewise a son of Whitehall Count has been used with grand success. He was named Red Sultan. Golden King is the sire of some stuff and Heir Sceptre has also sired some good ones. The sale will consists of about an even number of females and bulls. The stuff will be mostly young and will be presented in only good working order. The sale will be held in a splendid sale pavilion in Ewing, one of the best in the state, and those from a distance need not fear the weather for they will be made comfortable. Plan on attending this sale and if writing for any further information, kindly mention The Homestead.

THE Central Short-horn Breeders' Association has arranged to hold a two days' sale of Short-horn cattle at Kansas City, Mo., on March 25th and 26th. About 100 head of cattle (both bulls and females) will be sold. They will come from the herds of breeders who have the best interest of the breed uppermost in mind and will consign some of the best cattle produced in their respective herds. W. A. Forsythe, Greenwood, Mo., will manage the sale and all animals listed will be inspected by him before being accepted for the sale, thus insuring only first-class breeding stock. Breeders interested should write Mr. Forsythe or E. M. Hall, Carthage, Mo., secretary of the Central Short-horn Breeders' Association, as either will take pleasure in giving more complete information.

TELEGRAPHIC information from C. G. Good advises us of his arrival at New York with a splendid importation of Percheron and Belgian horses. Mr. Good has been absent for quite a length of time, making the selections for this importation and he has included in it stallions and mares of both breeds that are calculated to support the excellent reputation of the good farm and great big drafty horse such as critical buyers are looking for. Further announcements will appear in a later issue of this paper. In the meantime, however, those who see this importation will be able to make first choice of the animals it contains. Address inquiries to C. G. Good, Ogden, Iowa.

THE manager of the Blue Ribbon Stock Farm advises us that he is all sold out of Hampshire boars except one nicely marked fall pig that weighs around 350 pounds. He has, however, an extra good line of spring and yearling bred sows for sale. The yearlings are all by John Alden 7969 and are bred to Col. Joe 13209. The spring gilts are by H. C. Audley Boy 15527, and are mostly bred to Col. Joe. These animals carry some of the best blood lines and are good enough to go into any man's herd. Buyers are invited to make a personal inspection, and will be met at trains if notified in advance. For particulars and prices write to H. C. Mehring, Manson, Iowa.

SEND no money. That is the song which Sidney R. Feil sings in his advertisement on page 40. He doesn't want your money until he has proven through a sixty days' free trial that Sal-Vet is an absolute worm destroyer and live stock conditioner. His offer is to send a sufficient quantity of the preparation to last for sixty days and prepay freight charges on it. If it does what he says it will do you pay the bill. It is doesn't he cancels any charge. All you will have to do is to fill out the coupon in the advertisement and forward it to S. R. Feil, Department I H, Cleveland, Ohio.

M. W. MYERS, Beaman, Iowa, informs us that he has sold Ever Best 386670, an extra good Scotch topped yearling bull sired by King Banff 3d 337720 and out of Cedar Lawn Arabella 2d, to Mr. G. C. Longabaugh, Rich Hill, Mo. Mr. Myers also sold a pure Scotch bull to J. W. Lynch, Green Mountain, Iowa. Mr. Myers only has two good Scotch topped bulls left and these he is pricing very reasonable. They are the right kind to produce market-topping steers. See page 33 and when writing Mr. Myers kindly mention The Homestead.

THE simplicity of the X-Ray incubator is proven by the engraving which appears in the advertisement on page 18. The ease with which it is operated is illustrated by the fact that a single filling of the lamp is sufficient for an entire hatch. Their book No. 43 describing the machine and telling about prepayment of freight may be obtained by writing to X-Ray Incubator Co., Des Moines, Iowa.

POLAND Chinas of the real big sort are owned by Gilbert Johnson, Osceola, Neb., and on March 5th he will make a draft sale from his herd. The herd is strong in the blood of Wade's Jumbo, having used J.'s Jumbo in the herd for some time and still keeping a large number of sows sired by him. J.'s

Jumbo was a sow sire of more than ordinary importance, and it is to be regretted that such a valuable boar has gone out of the state. Some as good Poland China sows as we have seen in a long time are here on this farm and they are sired by that boar. Among the newer boars is Choice Orange by Big Orange and Hather's Hadley 2d by Hather's Hadley. This is a big boar for the Hadley family and comes of excellent stock on the side of his mother. Hather's Hadley 2d is the sire of Hadley Over the reserve champion at Chicago a year ago and one of the best aged boars that we saw the past season. He was to have been shown at Lincoln, but the Hather herd was stricken with disease shortly before fair time and he was not shown. It is a question if another boar would have defeated him. There is a fall yearling sired by Colosso in use also. He is a fairly good boar. Last spring he looked quite promising and we still think that he will make a good boar. The sale is a long way off, yet we would like for you to keep it in mind. There are also some good farmers' boars on hand and they will be sold at farmers' prices. Twenty-five dollars will buy them.

R. G. McDUFF, Monroe, Iowa, is well-known as a great fitter of Duroc Jerseys. At the recent Iowa State Fair he had forty-three boars on exhibition that were talked about by everyone who saw them. They were extra large, smooth and had plenty of quality. On January 23d Mr. McDuff will sell fifty-seven head of bred sows and gilts that are probably as good as will be sold anywhere this year. The fifty spring gilts and five fall yearling sows weighed on December 12th an average of 300 pounds each, one spring gilt weighing 365 and a number of them from 325 to 350. They will be sired by Col. Gano, King the Col., Golden Model 30th, I Am A Crimson Wonder 2d, and Cols. Chief. They will be bred to Golden Model 34th, the great son of Golden Model 2d that won grand championship in 1913 at the Nebraska State Fair. We will have more to say of this offering in succeeding issues.

R. F. FRENCH, Independence, Iowa, made a good winning on his Belgian stallions and mares at the recent Iowa State Fair. He sold a pair of these prize-winning mares last week to Beaumer Bros., St. Cloud, Minn. He sold a great three-year-old stallion, Paulis, a nephew of Paul, the Brussels champion of 1911, to a party at Stanley, Iowa. This stallion is a typical Belgian, with very heavy bone, the best of feet and a grand mover. Mr. French has been fortunate in not having a sick horse this year. The prospective buyer can get a stallion or pair of mares that are given exercise in open pastures every day. They are chained out daily in order that they may get a little grass as well as exercise. This insures them being regular breeders for the buyer. If interested in a good Percheron stallion or mare, write Mr. French, mentioning The Homestead. See page 34.

W. H. COOPER, Hedrick, Iowa, one of the best known of big-type Poland China breeders, is making a special offering of March and April gilts bred for March, April and May farrow at $40 each. They are sired by his noted herd boars, Big Bone 2d, Chief Leader, Big Expansion, Giant Look and others. Their sows are the kind that weigh from 500 to 800 pounds and the gilts he is offering are sure to get as large if given proper care. If you send Mr. Cooper a check for $40 he will send you a gilt and if upon arrival you are dissatisfied, send the gilt back and he will refund your money. If they die from cholera he will refund your money or replace the gilt. He is selling them very fast under these conditions and if you want one you had better send him an order at once. See page 39 and when writing kindly mention The Homestead.

GEO. EGGERT, Newton, Iowa, writes from London, England, under date of November 27th, saying that he will sail from London on December 4th on the Minnewaska, due to arrive in New York, December 13th, and at Newton on December 15th, with the best bunch of Belgians and Percherons he has ever imported. He states that he has had a very hard time to buy good ones and that he would buy nothing else. He says that the Belgians will average as good as his Iowa champion stallion in 1912. He will be glad to have any prospective purchaser visit his farm and look over his horses. Mr. Eggert believes he can please the most critical judge, both in horse as well as in price. See page 35 and when writing kindly mention The Homestead.

ON page 38 J. B. Slepicka & Sons advertise Chester White hogs. They have an excellent lot of animals, descendants of prize winners at the Nebraska State Fair and right every way. They have some good boars that will weigh from 125 to 225 pounds, which they are offering at from $20 to $30 each. A few sows bred for April farrow will be sold at $35. They have also for sale one promising herd boar, that is a show hog all over, weighing 225 pounds at $50. Detailed descriptions concerning these animals may be learned by writing to J. P. Slepicka & Sons, Wilber, Neb.

MARCH 18th is the day set for the Short-horn sale that will be made by Gates & Manes, Albion, Neb. This sale will mark the entire dispersion of one of the best small herds of Short-horns within the state. The entire herd will number about fifty to sixty head and they all go in this sale. One of the best Scotch herd bulls in use in Nebraska goes in this sale. He is a four year old, and of the most pleasing lines. He is a bull that would show well in the very best company and is also a sire of the real good stuff. The cow herd is one of the choicest sort. They have been selected with great care and while no sensational prices have been paid, yet in every instance these gentlemen have sought to get the very best stuff obtainable. All these choice cows, some very select young females and a few very fine young bulls and this grand herd bull will sell. Keep this date in mind and if possible get to this sale. We would advise that you write early for the catalog, better just send in your name on a postal now and that will insure your getting the catalog as soon as out. Should you write, kindly mention The Iowa Homestead.

Dates Claimed for Live Stock Sales

Short-horn Cattle.

Dec. 30, O. E. Wade, Rising City, Neb.
Jan. 6, Louis H. Scheetz, Belle Plaine, Iowa.
Feb. 17, Leahy & Swain, Ewing, Neb.
Feb. 26, W. B. Bonnifield, Ottumwa, Iowa.

Feb. 20, W. M. Putman & Sons, Tecumseh, Neb.
Feb. 23, E. L. Busch, Syracuse, Neb.
Feb. 24, Hanenkamp & Fowlie, Hickman, Neb.
Feb. 24, Fred Swan, Missouri Valley, Iowa.
Feb. 25, Theo. Foss, Sterling, Neb.
Feb. 27, B. W. Hunt, Denison, Ia.
Feb. 28, T. J. Link, Winterset, Iowa.

Hampshire Swine.

Jan. 15, F. O. Peterson, Galva, Iowa.
Feb. 4, C. A. Brook, Washington, Ia.
Feb. 17, F. T. Quire & Tice Bros., Sully, Iowa.
Feb. 24, Clayton Messenger, Keswick, Iowa.
Mar. 7, C. P. Paulsen, Nora, at Fremont, Neb.
Mar. 12, H. D. De Kalb, De Kalb, Ia. (Sale at Council Bluffs, Iowa.)
Mar. 19, Roy E. Fisher, Winside, Neb.

Chester White Swine.

Jan. 28, Alden Anderson, Ellsworth, Ia.
Feb. 10, B. M. Boyer & Sons, Farmington, Iowa.
Feb. 12, J. H. Stewart, Dickens, Ia.
Feb. 25, J. L. Barber, Harlan, Iowa.

Shropshire Sheep.

Jan. 8, Leonard & Son, Corning, Ia.

POLLED Durham bulls of Scotch breeding are offered for sale by M. Yoakam & Son, Webster, Iowa. They have about a dozen yearling bulls largely sired by their grass herd bull, White Gauntlet, a son of the noted Golden Gauntlet, and of the Lady of the Meadow family. White Gauntlet is a massive 2,200-pound bull with a good spring of rib and of splendid beef conformation. One of the best young bulls is a roan son of White Gauntlet of the Sweet Briar family, the second dam in his pedigree being imported. This bull is a big rugged fellow and should do someone plenty of good. There is another roan yearling Orange Blossom bull by White Gauntlet that is of a pleasing conformation. There is a two-year-old Orange Blossom bull by White Gauntlet that has been used some in the herd and a three-year-old son of Royal Tip that would be sold. There is another roan Myrtle by White Gauntlet that should make good if given the proper care. The entire offering is largely descendants of animals bred by the noted Polled Durham breeder, J. H. Miller, of Indiana. A few cows and heifers would also be sold. Webster is located in Keokuk county on the junction of the Montezuma-Muscatine Branch of the Rock Island and the Marion-Ottumwa Branch of the C. M. & St. Paul. Write these gentlemen for prices and breeding, kindly mentioning The Homestead. See page 33.

ANY farmer who is looking for a choice location will be interested in the advertisement of E. H. Bente on page 25, in which he announces the sale of his farm six miles southeast of Elkader. This farm consists of 185 acres, which is located in a section of splendid soil in which farms are well improved by desirable citizens and where land is of the most productive character. On this farm 145 acres are under plow, the remainder is choice timber land, which will be good plow land when the timber is taken off. There are two large springs, which furnish never-failing water for pastures, and a splendid equipment of buildings including a new eight-room modern dwelling house with a good basement. There are connections with both well water and soft, cistern water. There is also a fine eight-year-old orchard of 100 apple trees with plum trees and other fruits and a good evergreen windbreak. Liberal terms will be quoted at this sale. Possession will be given on or before January 1st, next. Any additional facts may be learned by addressing E. H. Bente, Elkader, Iowa.

WRITING under recent date T. A. Stevenson, one of the veteran breeders of Chester White hogs in the West, says: "I am offering some great inducements in the way of Chester White males and those who want to purchase good ones of the extra sort for the prices of other kind should write at once. I have the best lot of hogs this season that I have ever raised. They are simply great and the breeding is of the very best. I will ship pigs C. O. D. to responsible parties if they so desire. My ambition is to make satisfied customers and give the man the worth of his money every time. For the next ten days I will do even more than this." Write for prices and descriptions. Address T. A. Stevenson, Shannon City, Iowa.

FRANK N. CROW, Oxford, Iowa, writes that he is entirely sold out of Duroc Jersey boars, but has twenty head of extra good March and April gilts, five fall yearling sows and five aged sows that are bred for March and April farrow and that he will sell them worth the money. They are bred to a son of Col. Joe by Proud Col., and out of a dam by Wonder Model. This boar is a big-type boar and these sows should produce excellent litters from these matings. Mr. Crow also has a few late summer gilts that he will sell open, sired by Prize Wonder, a good young boar. See page 33 and write Mr. Crow mentioning The Homestead.

CHAS. L. BERRY, Iowa City, Iowa, is offering for sale Duroc Jersey boars of different ages, at prices that should move them. He also has a few sows and gilts that are bred for spring farrow and all have been vaccinated. See the Duroc Jersey advertisement on page 33. Mr. Berry is also offering White Plymouth Rocks of the same family as his prize winners at the Davenport Show, and he is also offering the winners at that show. See the poultry department. When writing Mr. Berry kindly mention The Homestead.

E. W. KREISCHER, Mt. Vernon, Iowa, will hold a sale of big-type Poland China sows February 5th, and we want to say to our readers that he will have a grand good offering. Last year his average was $76 on bred sows and we believe he has as good a bunch this year. Keep the date in mind and watch this paper for complete information of the offering.

HUNTERS will be interested in the advertisement of B. H. Smothers, Burnt Prairie, Ill., which will be found on page 19. That gentleman offers for sale two two-year-old coon dogs that are good in every particular and trained in the hunting of opossums, coons or minks. He wants $25 for each of them.

A HEREFORD cattle sale will be held by E. W. Elliott, Montezuma, Iowa, on January 13th at which time he will sell thirty-four head of Herefords consisting of fourteen bulls and twenty females. We will give our readers a full description of this offering in a later issue.

A NUMBER of Illinois breeders and importers of draft horses have organized a breeders' sale company, at Streator, LaSalle county, Ill. This com-

pany has incorporated under the name of the Breeders' Horse Sale Company, of Streator, Ill., and will hold annual sales of imported and American-bred registered and grade draft horses of all breeds, also light harness horses, single drivers and ponies. Streator is idealy located for a sale of this kind. It is situated in the richest agricultural district of the world and more full blood and registered horses are raised in this section than in any other part of the country. More good draft horses are bought and sold in Streator annually than in any other city in the state outside of Chicago. Many of these horses go to all parts of the country and it is a common occurence to see our local small breeders shipping a car load of good ones to the West and Northwest. Streator is located on the main line of the A. T. & S. F. R. R., the I. C. R. R., the Forrest branch of the Wabash R. R., the Dwight Peoria branch of the Alton R. R., the Fox River branch of the Burlington and the I. V. & N. branch of the Burlington R. R. Also has interuban connection to all northern parts of the state. It is the hope of the parties interested in this sale that in time they will be able to build up the largest and best horse sale in this country. The company is backed by men of the highest standing as business men and breeders. They will hold their first sale on February 3, 4, and 5, 1914, in a mammoth sale pavilion at Streator, Ill. The first-class accommodations which they have provided for horses will be pleasing to all buyers. Breeders seeking a good market for their horses will do well to consign to this forthcoming sale. Their entries will close January 3d. A sufficient number of horses to guarantee success have already been consigned and it would be well for you to get in line and apply for entry blanks to T. F. Kennedy, secretary, Streator, Ill. See advertisement on page 34.

POLAND Chinas boars, $25.—Those of our readers who want to buy a good Poland China boar of the large-type kind should send their order at once to James Cockerton, Whiting, Iowa. He has one of the best herds in western Iowa and he still has quite a few choice boars that he is closing out at $25 to $35. In writing us about these boars he says: "I have some good, big, heavy-boned boars left and these are good and I am closing them out at $25 and $35. If any Homestead readers want a good boar at these prices, just tell them to send their check and I will guarantee they will get a boar worth the money. Now, let them get their orders to me early, and they will get a good pig." When writing Mr. Cockerton kindly mention The Homestead.

BREEDERS of Duroc Jersey hogs who are in need of good yearling herd boars should get into communication with J. C. Porter, whose advertisement may be found on page 33. Mr. Porter has two October yearlings by R. J.'s Chief, a grandson of Ohio Chief, and out of a dam by Crimson Wonder Again. They weigh from 325 to 350 pounds. They have extra length, good, heavy bone, nicely arched backs, good heads and ears, and, while not overloaded with fat, they are in good fair condition. They have received treatment for immunity and are safe to buy. Mr. Porter wants to get rid of them quickly and for that reason will make very low prices. Address J. C. Porter, Ogden, Iowa.

A. L. GOODENOUGH, Morrison, Ill., one of the best breeders of Hampshire swine, is entirely sold out of boars. He has a fine lot of gilts that are bred and ready for sale, a number of which will weigh 250 pounds at the present writing. A representative of this paper inspected this lot of sows recently and we do not know where a man could get better values in an extra good bred gilt than at Mr. Goodenough's. He is pricing some of these best gilts at $50 each, which is less than their real value. He has issued a catalog which will be sent free to anyone interested. When writing Mr. Goodenough kindly mention The Homestead. See page 33.

BUYERS of Chester White hogs should direct their attention to the advertisement of Glenn F. Rider, which appears on page 33. Mr. Rider feels compelled, owing to local conditions, to make reduced prices in an effort to dispose of his surplus stock quickly. He, therefore, will ship stock C. O. D. subject to inspection and gives three pedigrees with each animal shown. Additional particulars with reference to this unusual offer may be learned by writing to Glenn F. Rider, R. 2, Farmington, Iowa.

SHIPPING hides to the Cownie Tanning Company is like putting money in the bank. You know that they are in safe hands and that you can get them when you want them. The Cownie people believe they can save their patrons 50 per cent of the cost of a fur coat or robe. The large illustrated catalog tells how. Secure a copy of it by writing to Cownie Tanning Co., 508 Market St., Des Moines, Ia. See page 17.

FIFTY Chester White sows and gilts are advertised by S. J. Philson, R. 6, Harlan, Iowa. He also has a few spring boars and one herd boar and would be glad to quote prices to our readers. See advertisement on page 33.

J. G. WESTROPE, Harlan, Iowa, is advertising a great string of high-class young Scotch bulls for sale on page 37. Make it a point to go and see these bulls if you are on the market for a herd bull.

THE progress that any certain breed of livestock has made in the past, and we presume that the same rule will hold good in the future, has been made largely by a few men. The really great breeders of livestock are not so many, but that they might be easily remembered. Among those that have contributed much to the cause of the good Herefords we wish to mention Mousel Bros., Cambridge, Neb. For some fifteen years these gentlemen have made an extra effort to produce only the very best to be had, and they have succeeded. Today their herds are noted the world over. They have sent out Herefords that have won in the hottest competition of this country, where the best beef cattle of the world are now produced. The get of the great Princeps and today the get of Beau Mischief are the chief causes of their success. At the recent International a group of calves the get of Beau Mischief were the chief objects of attention among all the good cattle shown at that place. The first-prize senior heifer calf was among the five shown, and all of the calves got a place and practically without fitting. The writer was on the Mousel farm late in the season and all the calves shown at Chicago were then running in the pastures without any grain whatever. The writer has bred many Herefords, have been in close touch with them for a lifetime, and we do not think we ever saw a better heifer than the one that was placed first at Chicago. True she is not highly fitted, bue she is certainly good. A senior bull calf is also good and was a good winner at Chicago, but a junior calf that was not shown is one of the very best that we have seen in years. He is quite late, having been calved in May or June, but he is good. There are a lot of good calves here sired by Beau Mischief, and they all go in the great sale that will be held in Cambridge on January 28th. Some of the most valuable Herefords that have been sold in many years will be offered at this time. Be sure that you get your name in so that you may be certain of a catalog, and we would suggest that you write at once. The catalogs will soon be off the press, so drop a postal for one today.

POLAND China bred sows afford a good investment for the average corn-belt farmer, and have helped more men to prosperity than any other single farm animal. Good sows of this breed, bred to good boars are for sale by W. B. Cooper, Milford, Neb., and are priced so that any farmer that can own a brood sow at all can afford to buy them. Mr. Cooper makes no public sales, but sells his stock so that they afford him a small margin of profit and so that a buyer once is afterward a satisfied patron that looks to him for his breeding stock at all times. We know whereof we speak when we say that Mr. Cooper is one of the good Poland China breeders of the country, and maintains a really high-class herd. One is indeed fortunate that he can buy such good stock at the prices asked which are from $20 to $30 per head for good bred gilts. It seems that when good stock can be had at these figures that there would not be a farmer but that would own a herd of pure breds. Polands from this herd have weighed 300 at seven months. They are the big kind and an early order will assure the buyer a good selection. Address W. B. Cooper, Milford, Neb., and mention The Homestead when you write. See advertisement on page 33.

NATIVES of France are distinctly favorable to Frenchmen. For this reason a person that claims that country as the land of his nativity is in position to do better buying of horses in that famous land of good ones than people of other nationalities. Jos. Rouselle & Son, Seward, Neb., are not only natives of that country, but they are mighty good judges of horses as well. They annually import some very fine specimens of the Percheron and Belgian breeds, and this season they are a little better fixed than formerly. They have some exceptionally good ones, although they have no great number. At present they have something like a dozen Percherons and about half that many Belgians. They grow their own feeds, on their own farms and by saving a little all around from the cost of buying to the cost of selling, they are enabled to make a substantial saving to buyers. If interested in a good horse, write Jos. Rouselle & Son, Seward, Neb. See advertisement on page 35.

RING BROS., Newton, Iowa, breeders of Poland China hogs place a new advertisement on page 33. They are advertising an excellent lot of bred sows and gilts and offering them at remarkably low prices. They describe these as heavy boned, strong footed animals with good length and deep, strong backs, and good markings. The blood lines are good. At the fall fair at Newton they took eight first premiums and three second premiums. The animals are all cholera immune. For special descriptions write to Ring Bros., Newton, Iowa.

CHOICE Poland China boars are offered for sale at reduced prices for the next fifteen days by Wm. H. Nolin, Monroe, Iowa, whose advertisement appears on page 33. The gentleman advises us that he has still for sale a few big, smooth, strong-boned boars, sired by Big Standard and Giant Chief. These have all been through cholera early in the fall and are thrifty and in good form. For quick bargains they are offered at from $20 to $25. Some high-class gilts are also for sale.

STOCKMEN generally are quick to see a bargain, and profit in livestock farming is largely due to being able to see value in an article offered and buying the same before someone else does. Following this trend one would think that the Duroc Jersey pigs that are being offered by D. S. Cochran, Route 7, Lincoln, Neb., would not last a day, nor would they if everyone were able to see them. They are sired by Royal Wonder, as good a breeding boar as is within the state of Nebraska today and they are from choice sows of good breeding. Mr. Cochran has a lot of hogs, has a number of sows to farrow this month, did not intend to have them, but during the fair the boar was among the sows a few days and a number of December litters will be the result. He does not want to lose this lot of pigs, but he is short of room for everything, hence he is making prices on these fall pigs that are really unusual. He is also offering bred gilts, some of them bred to Royal Wonder, and they go at prices any farmer can afford to pay. Get in line on this good stock without delay. Mention The Homestead and write as above at once. It is to your interest to do so. These pigs are extra good, and they are cheap at the prices asked.

KEROSENE engines and feed mills are advertised by the Fuller & Johnson Mfg. Co., on page 17. According to this advertisement government experimentors advise the grinding of feed for cattle because it economizes in the quantity of feed necessary to bring them to maturity and market form. The Fuller & Johnson steel mills crush and grind feed to any degree of fineness. For catalog and descriptive circular address Fuller & Johnson, Mfg. Co., 12 Ironton St., Madison, Wis.

A PUBLIC sale of Duroc Jersey sows is announced by T. J. Link, Winterset, Iowa, for February 28th. Mr. Link will not have a large consignment, but he will have a good one from every point of view. The entire lot has been given the double treatment and are in perfect health and may be considered immune from attacks of cholera. A portion of them are the get of Prince Albert's Choice and Missouri Girl. Later announcements concerning this consignment will be given in this paper.

DANIEL LEONARD & SON, Corning, Iowa, announce a public sale of Shropshire sheep to take place on the 8th of January next. The Leonard flocks are among the oldest in the West and have produced animals of strictly first-class character that have been uniformly satisfactory to buyers. They will put forward a splendid consignment at this sale. Further announcements will appear in later issues of this paper.

PEDERSON'S Poland China herd boar, Long Orange, illustrated on page 28 is a Poland China of unusual merit. He is a son of the 1,000-pound Big Orange, has good length and is of uniform build, heavy boned and stands right up on his feet. He is the sire of a good number of the spring boars offered for sale by Mr. Pederson and many of the sows to be cataloged for the February 16th sale will have been bred to him.

TEN choice fall sows are offered for sale bred to the grand champion Iowa State Fair Duroc Jersey boar, Big Wonder, by the Economy Stock Farm, Shenandoah, Iowa, on page 38. These are fall sows and are daughters of Col. Gano, King the Col., and Morton's Ton Col. Write the above firm at once and get their prices on these sows. Kindly mention The Homestead when writing them.

WILL THOMPSON, Jesup, Iowa, makes a change in his Duroc Jersey advertisement that will attract the attention of those who want strictly good Duroc Jersey boars. They have been given double treatment and are, therefore, cholera immune. He has a lot of them and will make extremely low prices to those who buy at once. He contemplates a brood sow sale some time in February.

A RECENT note from W. Z. Swallow, of the Pioneer herd of Poland China hogs, informs us of the sale of one boar to a buyer at Perry, Iowa, one to the Flynn Farm Company, Des Moines, Iowa, one to a California breeder, and another to Lyons, Kan. A few more remain for sale. Write for particulars to W. Z. Swallow, Waukee, Iowa.

BREEDERS of Duroc Jersey hogs, who are in search of a herd boar should write to T. Denney, Grimes, Ia. That gentleman offers for sale a great big, good, two-year-old son of Advancer First that topped the Bennethum sale a year ago. He will be sold at a very reasonable price. Address inquiries to J. T. Denney, Grimes, Iowa.

SOME time since Annie B. Thurman, Blanchard, Iowa, announced that at the public sale of livestock, the home farm would be sold. For various reasons the sale was not effected. The farm may be purchased at private sale and at a reasonable price. It is good land in an excellent community and well equipped for stock raising and general farming.

IMPORTED and home-bred Percheron, Belgian and Shire stallions and mares are advertised for sale by P. J. Eggers, Denison, Iowa, on page 36. His barns are located right near the C. & N. W. depot. Call and see his horses if you are on the market for either stallions or mares.

CATALOG and prices of tanning of the best sort may be obtained by writing to Willard, Son & Company, Box 425, Marshalltown, Iowa. This firm not only do tanning, but they manufacture fur coats and robes as well. See advertisement on page 17.

PROBABLY no investment will return as great a per cent of profit and pleasure as will a small investment of a good Scotch Collie puppy. These ever watchful and intelligent animals make good playmates and also good helpmates. The playing part should not be allowed to take too much of the young puppy's time until he has been trained to do some work, yet they are so keen to be doing things that they are easily trained. A good stockman should own a good Collie and allow him to take many of the steps that would otherwise fall to someone that is already well wearied with the routine tasks about a farm. W. B. Cooper, Milford, Neb., has made a business of breeding good Collies for many years and today has for sale several very fine sable and white puppies. They are old enough to wean and to begin training. They will be sold at $5 each while they last. Orders should be sent early, for they will not last long at the prices asked. Mention The Homestead when you write. Kindly notice the advertisement on page 19.

JEFFERY—that tells the story. Whenever you hear the word Jeffery you know that it means the large car illustrated in the advertisement on page 9. You know that it is a car which combines all the comfort, quality, beauty and economy that can be crowded into any vehicle selling for $1,550. Of course there are a few items of minor information that you might want to know. If you do just drop a card of inquiry to the Thomas B. Jeffery Co., Kenosha, Wis.

AN Imported Belgian stallion six years old is offered for sale by the First Bank of Thayer, Thayer, Iowa, as per advertisement on page 34. The horse is offered for sale not because of any fault, but because he came into the hands of the bank in an ordinary business transaction, and as they have no use for him they now put him on the market. He is a dark bay roan, weighs a ton and is right in every respect. He will be sold cheap. Write to the address named.

SHORT-HORN bulls for sale.—A few good young Scotch and Scotch-topped bulls are advertised for sale by Perry O. Brown, Lamoni, Iowa, on page 33. One of these is a dark red Lancaster bull sired by Western Star, and he is out of a dam by Lord Mutineer. Another is a Duchess of Gloster and sired by Victor Sultan. He also has a good Marsh Violet bull, and a couple good Scotch-topped bulls. Write Mr. Brown about these bulls or go to see them.

VAN STEENBERGE Belgian horses have been of a high standard of excellence for a good many years. At the present time the stables at Ogden, Iowa, contain more than half a hundred high-class imported and home-bred stallions and mares. Reasonable prices will be quoted on them. Personal inspection solicited. Address inquiries to A. M. Van Steenberge, Ogden, Iowa. See advertisement on page 34.

HEREFORD bulls and heifers are offered by Jesse Engle & Son, Sheridan, Mo. Many of these are by their good breeding bull, Beau Blanchard, sire of their junior yearling bull that won third in the strong class at the International. Some of the females not by him are in calf to him. Note page 36 for their advertisement.

KALAMAZOO stoves direct from the factory are like Christmas gifts. They please everybody. The Kalamazoo Stove Book illustrates 400 different makes of heating stoves at the most reasonable cost. Ask for catalog 185, Direct inquiry to Kalamazoo Stove Company, Kalamazoo, Mich. See advertisement on page 22.

THE Snoddy hog treatment advertised on page 27 is an important preparation for use in hog troubles. Its action is quick and effective. It prevents disease and destroys worms. It is made and sold by the Dr. D. C. Snoddy Company, Nashville, Tenn. Any information concerning it may be obtained by writing to that address.

WRITING with reference to his January 23d sale of big-type Poland China sows, E. E. Farver, Ocheyedan, Iowa, informs us that he will sell fifty head that are as good as any man will drive through the sale ring this winter. Mr. Farver will sell at Sigley. Later announcements will appear in this paper.

FARMERS who contemplate the construction of a building of any sort should investigate the merits of Genasco Ready Roofing, such as is advertised on page 8. While it is generally sold by dealers, information may be obtained by writing to Barber Asphalt Paving Co., Philadelphia, Pa.

AN immune yearling Duroc Jersey herd boar is advertised by H. C. Huston on page 33. The hog is a son of the grand champion Chief's Colonel, an excellent individual, and will be sold at a most reasonable price. For complete description write to H. E. Huston, Iowa Falls, Iowa.

PATRICK LEAHY, Williamsburg, Ia., announces a sale of Aberdeen Angus cattle for February 19th, at which time he will sell sixty head of superior specimens of the breed. Further information will be given our readers in due time regarding this event.

MR. WM. STOLL, R. 10, Le Mars, Iowa, is advertising Chester White boars on page 33 of this paper. He has some good ones that he will sell at reasonable prices. He invites inspection. The brood sows of his herd are of the popular and profitable sort.

IMPORTED Short-horn bulls and heifers are advertised for sale by R. O. Miller, Lucas, Iowa, on page 37. He has some corking good ones and he is

cing them where they will sell. It ll pay you to go and see this im- rtation at once.

PURE seed corn of Reed's Yellow Dent, Learning and Boone County White varieties are offered for sale by E. G. Lewis. This corn is well dried and will be sold at very reasonable prices. Address inquiries to E. G. Lewis, Media, Ill.

SHORT-HORN bulls bred in the rich- est Scotch lines and possessing in- dividual merit that will please the most critical are for sale by J. F. Prather, Williamsville, Ill., who will send a cata- log on application. See page 37.

POPULAR strains of Single Comb White Leghorn cockerels and hens are advertised on page 19 by George Gaul, Tipton, Iowa. The prices quoted are remarkably low when the quality and breeding are given consideration.

H. F. HOFFMAN, Birmingham, Iowa, is gaining a reputation for raising big Poland Chinas. Some time since he sold Big X. L. 183427, the hog that measured thirty-seven inches high, and weighed 950 pounds.

POLAND China boars—cholera im- mune fellows, are advertised for sale at from $20 to $40 by A. W. Stewart, Harlan, Iowa, on page 39.

THE LIVESTOCK MARKET.

Union Stock Yards, Chicago, Decem- ber 13.—Outside Wednesday morning's mean market, which was due solely to an excessive estimate and tardy rail- road deliveries, the cattle trade has done a very creditable stunt this week, and while the talent expects enough cattle to go around during the next ninety days a belief exists that the worst has been developed. A run of about 65,000 here this week, or 16,000 more than last week, has enjoyed action and the shipping outlet is perceptibly wider, oved 25,000 going in that direc- tion. November receipts to date are around 18,000 less than last year and all Missouri river points show decreases compared with the corresponding period of 1912. The six market run this week is 162,000 against 130,000 last week, but the increase has done no damage to prices. During the corresponding week last year the six markets received 184,000.

Whenever a steamer direct from the River Plate reaches New York, that market will be full of Argentine beef, but as most of it is in the hands of the big packers, they can be depended on to avoid demoralization, which would be adverse to their own interest. Every pound of imported stuff displaces just so much native beef, however.

Liquidation has been in full swing these many weeks past and it is prob- able that the big crop of beef started on the bumper corn yield of 1912 has gone to killers' hands. Fat steers with weight will soon be as scarce as they have been abundant and a few will al- ways be wanted. For the next sixty to ninety days liquidation of short fed cattle is to be expected. Many steers now in feeders' hands were bought high and that kind of stock never is regarded favorably. The feed bill is high and the desire to get into another and cheaper set of cattle strong. The hold-'em-back admonition is not likely to prove effective. About the only cloud in the sky is industrial depression. Idle men are sparing meat consumers. So far as supply is concerned an optimistic forecast is warranted.

BEEF STEER QUOTATIONS.

Choice to prime yearlings	$9.15@9.60
Good to choice yearlings	8.60@9.15
Good to choice handyweights	9.00@9.50
Good to prime heavy	8.75@9.25
Plain heavy steers	8.00@8.35
Short-fed steers	8.00@8.50
Good light killers	7.75@8.20
Medium light killers	7.50@7.70
Cheap light killers	7.00@7.50

Starting with a rush of speculative buying on Monday at irregularly higher prices, the butcher market turned bad before the close of that session and continued on the down grade on every- thing excepting strictly good to choice handy heifers on the yearling order throughout the first half of the week, since holding with little change. The close shows 15 to 25c declines from a week ago on practically all grades of cows from canners up to prime, cutters and medium to right good butcher cows showing the most loss, but canners also coming in for a material decline. Heifer trade has been in good shape all week on the good to choice fat yearling and tidy weights of nice killing class, such showing about a steady level with a week ago, but other grades of heifers are irregularly 10@25c lower. About the only change in the bull trade from the close last week is slight weakness, hardly more than 10c in any case, on heavy bolognas and fat heavy bulls. A good veal calf trade is looked for next week on the right kind of stuff to supply the holiday demand, but a widening in the price range seems probable. Quo- tations:

BEEF COWS.

Common to fair	$4.60@5.10
Fair to good	5.10@5.60
Good to choice	5.60@6.35
Choice to prime heavy	6.35@7.00
Prime to extra dry fed	7.00@7.65

CANNERS AND CUTTERS.

Inferior canners	$3.25@3.50
Poor to fair canners	3.60@3.85
Good heavy canners	3.90@4.15
Fair to good light cutters	4.15@4.35
Good heavy cutters	4.35@4.60

HEIFERS.

Poor to medium	$5.00@5.75
Medium to good	5.75@6.60
Good to choice	6.60@7.25
Choice to prime heavy	7.25@8.00
Good to prime fed yearlings	7.50@8.25
Prime to fancy yearlings	8.25@9.00

BULLS.

Canner and poor light	$4.75@5.50
Light to medium bolognas	5.60@5.90
Good to ch. heavy bolognas	6.00@6.25
Plain to good beef	6.25@6.75
Choice to prime beef	7.00@7.75

CALVES.

Inferior to fair heavy	$ 4.50@ 5.50
Fair to good heavy	5.50@ 6.00
Good to choice heavy	6.00@ 7.00
Good to ch. stock calves	7.25@ 8.25
Medium to ch. medium wts.	6.50@ 8.00
Fair to good vealers	10.50@11.00
Good to prime vealers	11.00@11.50

A good start was had in this week's stock and feeding cattle trade, but country demand failed to measure up to the supply appearing subsequently and the market is closing with the Monday strength rather more than lost, many sale showing 10@15c declines from high spots touched in the trade on country account last week, steers fleshy enough to get killer competition holding up well, rather by reason of that demand than through feeders' call for such grades, country buyers con- tinuing to show strong favor for year- lings and stocker sorts of good class. Demand has come chiefly from nearby states, Indiana, Ohio, Illinois and Mich- igan taking the bulk of the supply, with a right generous call from Ken- tucky distillery feeders, chiefly for 800 to 1,000-pounds steers. Quotations:

Best selected, 950 to 1150 lbs.	$7.25@7.50
Best selected, 650 to 800 lbs.	7.15@7.50
Good to ch., 600 to 1000 lbs.	6.65@7.10
Fair to good, 600 to 800 lbs.	6.15@6.65
Com. to fair, 500 to 700 lbs.	5.50@6.15
Inferior to com., 500 to 700 lbs	5.00@5.50
Good to choice stock heifers	5.75@6.35
Poor to good stock heifers	5.00@5.75
Good to choice stock cows	5.10@5.40
Poor to good stock cows	4.60@5.10
Good to choice stock calves	7.00@8.00

Hog trade is showing remarkable stability. Receipts this week at Chi- cago will make the largest total for any week within a period of about four years, close to 220,000 head having been received during the six-day period, yet prices at the close Friday, though 2½c lower on the extreme top, average 5c higher than a week ago. Within the last two weeks the eleven leading mar- kets have received 1,300,000 hogs, about one-third of the grand total being cred- ited to Chicago, yet prices are 8c higher than two weeks ago. One of the big factors in the stability of the market is the fact that hogs are cutting up profit- ably. Even by the hedging process there is good money in handling them. It is argued that provisions are out of line with hogs, but a readjustment may be effected by marking hog quotations up. Quality is running good and the prime range is the narrowest of the year, few selling on the Friday market below $7.60, the bulk at $7.65@7.80 and the extreme top being $7.87. Pigs have had a good advance and are selling largely at $7.35@7.50. At the present rate of marketing the small decrease shown in the year's receipts at eleven leading markets will be wiped out by the year's end. For the year to date the eleven markets have received 23,- 617,000, or 77,000 less than like period last year. Chicago supply has increased nearly 240,000 for the year to date. A Kansas City hog man here this week in speaking of the probable winter hog supply said: "The winter supply every- where in Missouri river territory will be light and weight deficient. Cholera is still raging in Kansas and that state will have a meager hog crop to market. Her feeders are using corn costing 70c per bushel and upward and with that handicap to contend with the stuff will merely be fed until it can pass muster at the market. Omaha territory has also been ravaged by disease, but corn is more plentiful in Nebraska and Oma- ha will be getting hogs late in the win- ter when Kansas City will behave. Last week Kansas City received sick hogs from Missouri and Kansas stations 500 miles apart, indicating the extent of the infected area in Kansas City area."

Friday's closing hog quotations on the Chicago market follow:

Bulk of sales	$7.65@7.80
Mixed, 215 to 250 lbs.	7.60@7.70
Mixed, 170 to 200 lbs.	7.55@7.70
Medium weights	7.70@7.80
Light butchers	7.65@7.75
Heavy butchers	7.80@7.72
Light shippers	7.60@7.70
Heavy shippers	7.80@7.72
Heavy packing	7.65@7.80
Rough heavy packing	7.50@7.65
Throwout packing sows	7.10@7.50
Fair to choice light	7.50@7.70
Light-light, 135 to 155 lbs.	7.40@7.55
Pigs, good to fancy	6.85@7.50
Pigs, inferior to fair	6.00@6.75
Boars, inferior to fair	2.00@3.50
Stags, subject to dockage	7.90@8.25
Government throwouts	4.00@5.50

Chicago has received about 155,000 sheep and lambs this week, or 20,000 more than the week previous and 15,000 more than a year ago, supply figures that look somewhat bearish, but a glance at receipts at other markets, both east and west, reveals nothing but light to moderate runs and helps ex- plain the healthy condition of the trade. Failure of Buffalo and other eastern markets to attract generous runs by the good level of prices that has pre- vailed this week is taken as a strong indication of scarcity in territory east of Chicago and light runs at Missouri river points likewise reveals no big surplus elsewhere, as "river" markets have been on a parity with Chicago all week. The fine feeding weather which has prevailed throughout the corn belt thus far this winter has enabled feeders to avoid glutting the market at any time, and though a lot of half-fat stuff has been sent to the shambles it has only come in on the bulges, much of it out of feeders' hands who saw a profit available and grabbed it in preference to holding until a probable storm forced them to liquidate their holdings. Big inroads have been made on supplies in Wisconsin and Iowa especially, and the

WADE'S GREAT REDUCTION SALE OF SHORT-HORNS

WILL BE HELD IN SALE PAVILION IN

COLUMBUS, NEBRASKA, TUESDAY, DECEMBER 30, 1913

THE sale offering will consist of practically the entire herd of choice Short-horns. They have been bred from the best of foundation material and represent the highest type of real UTILITY SHORT-HORNS. Some of these cattle are pure Scotch, others of the choice American families. Not a one listed but that is of known value or of rare promise. Herd-heading bulls and a select lot of producing cows and choice heifers make up the offering. There will be about thirty head. Good hotels and train service at Columbus. You will be made comfortable. Spend the day with us. Col. Z. S. Branson, auct. Mention The Homestead and apply for the catalog. Address

O. E. WADE - - - RISING CITY, NEBRASKA.

ALL BREEDS-----IMMUNE BOARS AND GILTS-----ALL BREEDS

WE handle only the best of the respective breeds and will sell you the best sort of stock at strictly farm- ers' prices. Some extra choice boars; also bred sows of all breeds. Some registered Jersey cows and a bull. Also Indian Runner ducks. Write us at once for prices. Mention The Homestead. Address
NORFOLK BREEDERS' CO-OPERATIVE ASSOCIATION - NORFOLK, NEBRASKA.

Poland China Bred Sows $20 to $30
Good ones. **W. B. Cooper, Milford, Nebraska**

trade believes will, if judiciously marketed, find a good market.

Choice lambs of handy weights have been consistently good sellers throughout this week. The spread in prices has widened out materially, due to the presence of so much half-fat stuff and the scarcity of and strong demand for choice goods suitable for Christmas trade requirements. Prices are anywhere from 15 to 40c higher than a week ago, prime handy lambs showing the most and half-fat classes, matured muttons and heavy yearlings the least gain. Prime lambs at $8.25 at weekend are as high as any lambs sold on this market since last July. Closing quotations:

Lambs, good to prime	$7.85@8.25
Lambs, fair to good	7.40@7.85
Lambs, common to fair	6.85@7.85
Lambs, culls & coarse bucks	5.75@6.75
Lambs, fair to best feeders	6.35@7.00
Yearlings, goodto ch. handy	6.50@7.00
Yearlings, fair to ch. heavy	5.75@6.60
Wethers, good to prime	5.40@5.75
Wethers, fair to good	5.00@5.40
Wethers, feeders	4.25@4.85
Ewes, good to choice heavy	4.50@4.75
Ewes, good to choice handy	4.60@5.00

Encouraging the Beef Industry.

By J. L. Tormey.

THE press, both agricultural and otherwise, has had much to say the past few years concerning what they are pleased to call "a meat famine." Experiment stations throughout the corn belt have done much in the line of missionary work encouraging farmers to go into the production of beef cattle. Packers have met and suggested that they would give $500,000 as a sort of nest egg to be used in disseminating literature that might be useful in getting farmers back into the production of beef, so that the enormous coolers and plants which they have erected in the past years to accommodate a surplus of beef might again run to the limits of their capacity.

Whether all these agents have served to stimulate men to engage in the industry or not is still a question, but as a general thing the man who ventures into the game of playing the beef cattle market has as much vision as some of the enlightening agents concerning the cattle trade. Knowledge of the business and the hazards of the game do not seem to be so productive of profits and losses in the business as does the condition of the market at time of buying and selling; and at present in localities of the state of Wisconsin, and in other states, as well, the radical fluctuations and the unstability of the Chicago market are doing more to discourage men than could be offset by all the teachings of the press, packers and station experts.

In the blue grass section of southwestern Wisconsin, especially in the cattle sections of Iowa and Grant counties cattle men have never in their lives been bluer concerning the outlook of their financial conditions. Men of years of experience to whom the college of agriculture points as types of successful business men, and to whom prosperity has come because of their wisdom and foresight, have never, perhaps, been confronted by such discouraging conditions as those they face at the present time. A year ago their grass cattle sold well, and feeders and grazing cattle that had been put into pastures and feed lots in the spring and fall previous made satisfactory returns to the cattle men. When last spring came they had every reason to believe, relying as they do for their information upon press reports and the knowledge of commission men, that there would be a continued so-called "shortage of cattle" and that they were safe in filling pastures with high-priced feeders. At any rate if feeders were to be obtained they could only be obtained at a fancy figure.

Some of our agricultural organs offer balm to farmers who have pastures and make the assertion that cost can be grazed down during a grazing period of six months. A man is entitled to capital invested in land and to taxes, and if those two items are included it is practically impossible for anyone to graze down cost of gains on anything but the cheapest land. In fact, the ordinary gain put upon a steer through the summer will not more than pay a fair rate of interest upon the land he grazes upon, and if there comes any break in price such as occurred this fall, there is sometimes nothing but loss left to the farmer. The appalling part of the affair is that most of the cattle must be bought on time, so that in many instances, the man loses not only the use of his land for the year, the price of the taxes, the interest on the borrowed capital, the interest on an increased account which he perhaps must start for the new year, and oftentimes the cattle bring less money in the fall than was paid for them in the spring.

We know of one man in Grant county who is said to have $45,000 tied up in cattle, and some of these cattle he has carried over from last fall. They were fed last winter, and grazed this summer. From the appearance of conditions a year ago he had every reason to believe his cattle would bring 9 cents the first of May, but a break about that time brought the price down to about $8.25 per hundredweight. In hopes of recovering he kept them until this fall, but the market for them is now in even worse shape. Another operator in Iowa county who has been intimately and successfully associated with the cattle trade for years and is recognized as one of the most successful men in the ame in the state is meeting with equally discouraging circumstances. It is stated that there are farms in Iowa county that are in danger of being lost to the owners, who were led to believe that it would be a profitable venture for them to dip into the beef game and invest in high-priced feeders; and those men have been familiar with conditions for years, and some of them have been most successful operators. They simply forget to reckon with the unstable market whose fluctuations experts seem unable to predict.

How nice it would be for all of us were we able to forecast as well as to follow past events! But the season just past may serve as a lesson to many operators and others closely associated with market conditions, and a study of causes may explain in part the present conditions of the market. Demand and supply coupled with weakness of human nature go a long way in accounting for many of the disastrous changes which have come to the market the past year. Last year corn was a record-breaking crop, and prices for it ruled so low that many corn raisers felt they could better afford to keep the corn, pay high prices for feeders and feed the corn, than to sell it for the prices offered on the market. By going into the markets and bidding high dollars for feeders, they also forced the price of good cattle to an abnormally high figure, which was fine for the man who had cattle to sell, but was not good for the future of cattle prices. In other words the market was given an unhealthy stimulus or boom.

However, it seems to be the illogical time for men to become discouraged. At present prices feeding cattle are a safer proposition than they were a year ago, and it seems that the logical thing for men to do is to buy feeders at present low figures and look forward to a light feeding year to come next year with restored good prices. The break in the market has put fear into many a good operator, and from the number of feeding cattle going to the country, the coming year promises better for the feeder who sticks by the game.

HOMEWOOD STOCK FARM

Our regular Fall Importation of

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

ARRIVED in October, and are now on sale at our barns. The stallions are mostly two year olds and the mares are yearlings and two year olds. In addition we have on hand some extra weighty three and four-year-old stallions, both imported and American bred, from which to make selections. We guarantee all our animals in every way, and sell under a 60 per cent breeding guarantee. Horses priced as low as is consistent with good quality and rich breeding. Write us today.

We can sell you a better horse for less money than you can find at any other establishment.

S. METZ & SONS, HOMEWOOD, ILLINOIS

Homewood is 23 miles south of Chicago on Illinois Central railroad, with trains every hour.

IMPORTED PERCHERON AND BELGIAN STALLIONS AND MARES

ALSO HOME BRED STALLIONS

I THINK it better to have extra good stallions to show when customers come to see than it is to claim you have them and cannot show. If interested write or come and see me. Address

I'll Stop Your Worm

with **Sal-Vet**, the great worm destroyer and conditioner—or no pay. I've been doing it for farmers everywhere—I stand ready to do it for you and ***before you pay me a penny.*** I offer you a ***safeguard against loss*** from stomach and intestinal worms, which farmers and stockmen, say, is the ***most successful*** and efficient preventive ever discovered and which many Agricultural Colleges and Experiment Stations endorse. Read their letters herewith.

READ THESE LETTERS

FROM PRACTICAL FARMERS

"The cholera has been killing hogs all around my home, but I have not lost a single one. I have never used so effective a remedy."—Sanford Gerst, South Boston, Va.

"I found 'Sal-Vet' to do just what you said it would; it is sure death to worms. Moreover, although the cholera has reached throughout this neighborhood, I have not had a single loss since feeding 'Sal-Vet.'"—Joe Gahimer, Alexandria, Ind.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding 'Sal-Vet.'"—Thomas Cannedy, Roodhouse, Ill.

"Hogs all over our country are dying in large numbers, and many right here in my town have lost hogs from some cause, but I could not wish mine to do better than they have since feeding 'Sal-Vet.'"—D. E. Knight, Honeah Path, S. D.

"Before getting your 'Sal-Vet' I had lost thirteen of my best hogs, but since feeding 'Sal-Vet' I did not lose a single one, and every animal is in fine condition."—Geo. Moren, R. No. 1, Pittsburg, Kan.

"Before I started to feed 'Sal-Vet, my hogs were sick; and I had lost six of them; since feeding 'Sal-Vet' I have lost none, although some of them were pretty sick before they had access to 'Sal-Vet' and had lost their hair. However, they pulled through all right and now have good appetites and are thriving."—Earnest Triebel, Rt. No. 2, Clearwater, Minn

"'Sal-Vet' freed my hogs from worms by the wholesale. I'll not be without it."—(Signed) Henry Iverson, Wagner, S. D.

"My hogs are doing finely; have kept 'Sal-Vet' before them for two months and while there has been lots of disease amongst hogs in this section, none of mine have been sick."—Geo. A. Eline, Rt. No. 20, St. Mathews, Ky.

"I have kept 'Sal-Vet' before my hogs all the time, and I never saw them do so well. A lot of hogs died all over this part of the country, but mine have remained perfectly healthy."—Thomas V. Smith, Ellington, Mo.

I'll Feed Your Stock 60 Days Before You Pay

simply to show you what **Sal-Vet** will do for you, I will prove to you what I have proved to thousands of farmers in every State. I'll furnish all the **Sal-Vet** you will need for 60 days' use. Feed it according to directions—if it don't do what I claim you won't owe me a penny—if it does—the cost is trifling compared to the benefit.

The Great WORM Destroyer

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great LIVE STOCK Conditioner

is a medicated stock salt—death to deadly, disease-breeding stomach and intestinal worms. It is a great conditioner for all stock. Cholera and swine plague are sweeping the country. Low vitality caused by worms is often responsible for these diseases starting on many well kept farms. Take no chances. Don't experiment—feed **Sal-Vet** and rid your hogs of deadly worms. You have nothing to lose by accepting my prove-it-before-you-pay offer.

Send No Money—Just the Coupon

Tell me how many head of stock you have. Don't send me a cent of money—just the coupon. Simply pay the freight charges on arrival—feed the **Sal-Vet** according to the directions, then after the sixty days are up, report results. If it don't rid your stock of profit-eating, disease-breeding stomach worms and intestinal worms—I'll cancel the charge. ***I take all the risk.*** Don't delay sending me the coupon. The time to take precaution is NOW. Tomorrow may be too late.

Get your coupon in so that I will have a chance to fill your order at once. I am shipping tons of Sal-Vet every day on this offer.

VOL. LVIII. NO. 52. DES MOINES, IOWA, DECEMBER 25, 1913. WHOLE NO. 2933

Trusting in Santa Claus

I'll Trade You a Galloway Manure Spreader Any Time for 400 Bushels of Corn! Read This Letter.

Here's One Man's Experience With a Galloway

I own a six hundred acre tract of land and had it rented. The renter neglected to haul the manure out as it occupied a great deal of time in the old fashioned way of spreading with a fork. So in 1908 I decided to purchase the GALLOWAY SPREADER and put a man to work for one month. He hauled on an average of twenty loads per day. He hauled five hundred loads or more, about two-thirds more than the original way. I had even the old stack bottoms spread over the fields. We started on forty acres and manured twenty, that was in the fall of 1908. We put the forty in corn the next spring and **the twenty that got the manure yieided twenty bushels more per acre than the other twenty beside it on ground not manured.**

Both the renter and myself were well pleased with the results and the next spring, 1909, we decided to utilize all manure we could as it required so little time to use the GALLOWAY SPREADER as it takes about three minutes to distribute one load, and it takes thirty minutes or more the old fashioned way, then we get it more even and the manure went twice as far. I noticed in going over another farm, that I oversee where there is no spreader provided, the manure was in chunks, other places were barely getting little orno good of the fertilizing. **The hay on the meadow yielding one-third more where we used the spreader.**

And in the fall of 1909 we manured ten acres for corn and when gathering this fall **we gathered from one-third to one-half more corn to the acre than heretofore, enough or more than enough to pay for a GALLOWAY SPREADER.** The land beside the ten acres was just as good, but did not yield but one-third as much. We tried it again on meadow land with good results.

FRANCIS E. CROUCH, Blockton, Iowa

Are You A Land Owner? Are You A Renter?

Then read this remarkable letter from an up-to-date, progressive farmer. Yes, sir, read it over twice---three times---a dozen times. Read it over and then think it over—it's the most unusual—the most remarkable—testimony on manure spreaders ever written. Why? I'll tell you why! Because, here is the case of a large landowner furnishing his renter not only with a manure spreader but with a man to run it at his own expense in order to get the manure out on his land and keep it in good condition. Did you ever hear of a similar case? I never did. I've heard of landowners buying spreaders for their tenants, but never before hiring a man to do the work.

Did it pay? I should say it did! Ask Mr. Crouch or his tenant. Will it pay you? I can show you thousands of letters from my customers that prove a Galloway Manure Spreader to be the best machinery investment they ever made. Yes, sir, it will pay you and pay you big. You can't afford to be without one.

Let me tell you something. There are millions of acres of land in this country today starving for want of manure—land that would pay a profit with the aid of manure and a manure spreader. There are a million and more farms in this country today without a manure spreader running at a loss that would pay a profit if the owner or renter would invest in one. That's what it is—an investment—a big dividend producer for any farm.

Now, I am dead in earnest about the proposition I made you at the top of this page. I am dead in earnest on this manure spreader proposition. I believe the manure spreader is the most needed tool on the farm. **No farm can afford to be without one. Yes, sir, I'll trade you any style or make of Galloway Spreader you want any time for 400 Bushels of Corn.**

Will you do it? Never! Of course you won't because I'd be getting the long end of the deal. **I know it!** But, that's just what the Galloway Spreader did for Mr. Crouch; produced 20 bushels more corn to the acre on 20 acres on the same identical ground—than he raised on twenty acres where he didn't use the spreader. Paid for itself the first season. Didn't it? And then paid good big interest the next season on his hay land. It will pay you just as well. Mr. Crouch could better afforded to have traded me 400 bushels of corn for his spreader than to have done without it for, it made him that much and more the first year, — while he has the use of the machine for years to come. So can you or any other man afford to take me up on my one-sided offer, but I don't ask it. No, sir, I don't ask one-fourth that much. My prices are so low and my direct from factory terms so liberal that any man can afford a Galloway Spreader.

Now here's the point. It doesn't make any difference whether you are a landowner or renter, you can't afford to be without a manure spreader—not for another day. If you're a landowner it will pay you a bigger profit out of your land and raise its value. If you are a renter it will help you pay the rent and make a bigger profit besides. The manure spreader means the same thing to either landowner or renter. **Bigger profits at the end of the year.**

That's not only my word for it—but, the word of thousands of business men farmers. A lot of them at first didn't believe their Galloway Spreaders would make them the profit I said they would—that today wouldn't sell their spreaders for many times what they cost if they couldn't get another one.

Borrow the money at the bank if you have to and buy one—or better still write me for my liberal time payment terms and let the spreader pay for itself. It will do it. Now, just note my new low prices on Galloway spreaders. Get my new catalog giving all the facts. Just fill in coupon below. Do it now.

WRITE ME TODAY FOR MY NEW CATALOG DO IT NOW!

My Direct From Factory Prices Save You $25 to $45

$39.50 CASH WITH ORDER PRICE — **Buys My No. 0 Wagon Box Spreader--- The Lowest Price Ever Made On An Attachment Spreader**

My No. 0A Complete 50 Bus. Spreader Only .... $64.75 CASH WITH ORDER PRICE — **The Lowest Price Ever Made On A Complete Manure Spreader**

My spreader prices are slashed clear to the bone. You have never before in history had an opportunity to purchase a strictly standard, high quality spreader at such a never-before-heard-of price. Yes, sir, right at the start I will save you from $25 to $45 on the manure spreader you buy of me. Isn't this money worth saving? It certainly is and I know every business man farmer is going to take advantage of these new low prices. Investigate! That's what I want you to do. The more you investigate my prices, my spreaders and my direct from factory, one-profit-plan of selling the better I like it. It means in the end just one thing sure—a new customer and a new friend of the Galloway Way. Remember, my new low, unequalled prices are made possible by my dealing right direct with you—cutting out all middlemen's profits, all salesmen's expenses and dealers' bad debts. When you buy of me direct from the big Galloway Chain of Factories you have only one small manufacturer's profit to pay in addition to the actual cost of materials and labor that enter into the construction of my machines. Then back of every spreader I sell goes a strictly 5 year guarantee on materials backed by a $25,000 legal bond. With the most liberal free trial offer ever made. My spreaders must please you absolutely after a thorough test on your own farm or you can return them and I will refund your money and pay all the freight. Can you beat this offer? Never! Try the Galloway first, before you think of buying any other style or make of spreader.

Nine Different Styles and Sizes to Select From

You will find just the size and style spreader you want for your farm in the complete Galloway line at a price that will tickle your pocketbook. My attachment or wagon-box spreaders are the only successful wagon-box spreaders made, for their patented adjustable features are necessary. No other make or cheap imitations have these features. Remember the Galloway is the first and original wagon-box spreader. More of them in use today than all other makes combined. They will fit any style of farm wagon gear or truck. Four styles and sizes to select from.

My Complete Spreaders are unequalled—Trucks are detachable and can be used for other purposes. Three styles and sizes to select from. My big Jumbo, 80-bushel capacity spreader is a giant among spreaders and sells for only $93.50 f. o. b. Waterloo. My low-down, semi-underslung spreader is the last word in manure spreader construction. Light draft, two horses will handle it easily, large capacity, equipped with the proven Galloway features of mechanical construction—in a class by itself. Get my new catalog showing all my different styles and sizes. Do it now.

Trucks Detachable. Saves You $35 to $50

Don't forget this great fact. When you buy a Galloway Complete Spreader—My Famous No. 5, 60 and 70 bushel capacity machine for instance, you get a regular standard, wide track farm truck that you can use for other purposes. It is equipped with patented adjustable bolster stakes so it will take a regular wagon box, hay or hog rack or you can use it for hauling logs, etc. My spreader trucks are the best and strongest farm truck on the market. Made almost entirely of steel with flexible front trucks—cut under type. You can't buy their equal at a dealer's for less than $45 to $50. You save that much by buying your complete spreader of me, for I save you the price of an extra farm truck. These spreader-trucks are guaranteed to carry 6,000 pounds. Both my spreaders and trucks are sold under the strong Galloway Guarantee of your money back if not satisfied. Try them 30 days on your own farm, entirely at my risk with the money in your own pocket. Get my new special **30-day Free Trial Offer.** The most liberal offer ever made. Write me today for my catalog and full details of my offer.

Get My Special Offer

Then as a final clincher I have a new, special, cooperative, profit-sharing offer to make you that simply can't be beat. It will help you get your spreader partly or entirely without cost to you in the end. No canvassing or soliciting. Just the simplest business proposition you ever heard of. Write me today for my new spreader catalog and I will give you full particulars of my offer and send you also Free my valuable book of information "A Streak of Gold" which is worth the price of a manure spreader to you any time if you follow its common-sense suggestions on the proper use and care of manure. It's brim full of valuable information on this important subject. Send for my catalogs. Do it before you lay this paper down. DES MOINES, IOWA, THURSDAY, DECEMBER 25, 1913.

Farm Woman Wins High Honor

Born in the Heart of the Grain Belt Mrs. Belle Van Dorn Harbert, of Colorado, Becomes President of International Congress of Farm Women—Works on Own Farm and Wins Success Unaided.

NEAR the little town of Manzanola, Colorado, lives Mrs. Belle Van Dorn Harbert, a practical farm woman, who was elected president of the International Congress of Farm Women last summer at Ghent, Belgium, The nations represented at this congress were Canada, Ireland, Scotland, England, Spain, France, Belgium, Holland, Germany, South Africa, Australia, Hungary, Denmark, Servia, Colombia, South America, Panama, Austria, Switzerland, Poland, Russia and the United States.

In this wonderful assembly were delegates ranging from the Princess of Spain down through all the social grades to the hard-working farm woman. Their spirit was very democratic, friendly and uplifting. Mrs. Harbert, attired as a practical farm woman, mounted the platform and made her straightforward talk to the thousands of delegates, among whom were many women of distinction and wealth.

She simply carried all hearts when she told them that she was only one of 90 per cent of the farm women of the world who did their own kitchen work, that she knew all about poverty and want, for she had experienced both, that she knew something of the need of the farm woman, and that she was a practical worker, having pruned with her own hands a thousand cherry trees before she left her home in the United States.

These delegates were so well pleased with her address and spirit that when the opportunity was given they arose with one accord and chose her as their first president of the International Congress of Farm Women.

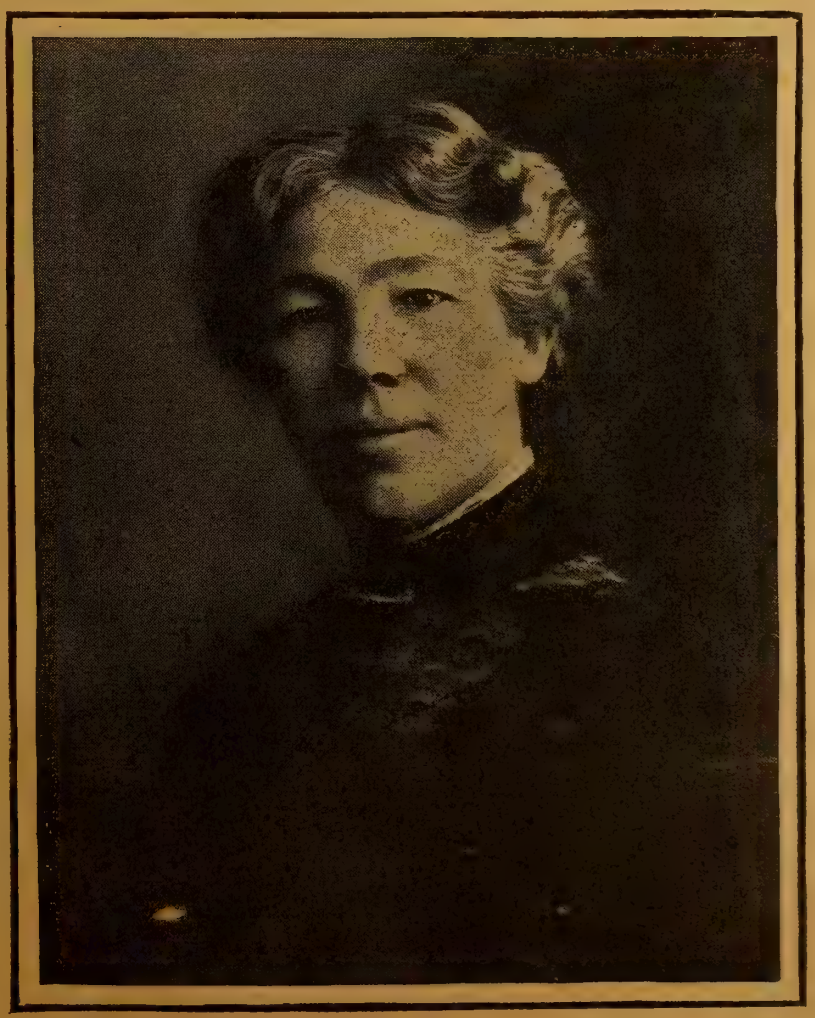
Then they entertained her magnificently. The Belgian division of the congress provided her with an interpreter and a guide. At her disposal was a costly automobile and an English-speaking chauffeur. Mme. Jules Malotte, of Ranncourt, Belgium, gave a banquet in her honor. Here she was introduced to the representatives from twenty different countries. In Brussels the greatest orchardist of the world honored her with an orchid tea. In Paris Mme. de Velmouir introduced her to the president of France, and he took her for a marvelous automobile trip across France and through Spain to the great rose gardens near Seville that are called "Perfumers' Paradise." Here she viewed a vast valley brimming with roses of many colors and intoxicating odors. It was a never-to-be-forgotten experience and intellectual and social feast which made her feel the close and tender relation existing between the peoples of the earth. But who is this woman? She is a new sort. She is intellectual, broad, tolerant, and simple as a child. She was born in Des Moines, Iowa, and supported herself from the time she was eleven years of age. She had a great battle with poverty and adversity, but worked her way through college. By studying at night she took her bachelor's and master's degrees. She went to Denver, Colorado, where she taught for a number of years. She knew nothing about luxury until she had carved the equivalent out with her own hands. A few years ago she and her husband moved to a farm near Manzanola where she is, as she declares, "a practical farm woman."

Three years ago the International Congress of Dry Farming held its fifth annual session at Colorado Springs, Colorado. At this enthusiastic congress a great many women, who were extremely interested in farming, had gathered. Mrs. Harbert and Mrs. E. L. Burns were especially interested in the work of farm women and made their influence felt. So with the consent of the men they organized and started the American movement known as the "National Congress of Farm Women."

These two women financed the movement and began their labor of love for the farm women of the country. There were twenty-five women in the first organization, but by the close of the following year when the International Dry-Farming Congress met at Lethbridge, Canada, this organization of farm women numbered ten thousand. During the meeting the women of Canada organized and united with the American women and called their new organization "The International Congress of Farm Women." Mrs. Harbert was elected president; Mrs. Bertha Stavert, of Calgary, Alberta, first vice-president; Mrs. A. T. Watt, of Victoria, B. C., second vice-president; and Mrs. E. L. Burns, secretary, with a large executive board composed of well-known Canadian and American women.

At the beginning of 1913 this organization was requested to participate in a Farm Women's Congress to meet in Belgium about the middle of the following June. Mrs. Harbert as president of the congress accepted the invitation. As there were no funds to defray her expenses for the trip, the Agricultural Club of Otero county, Colorado, with headquarters at Rocky Ford, only ten miles from the home of Mrs. Harbert, assisted in meeting her expenses

When Mrs. Harbert departed for Europe in May, 1913, the American branch of the Farm Women's Congress had grown in membership from 10,000 to 200,000. There also had been a great growth in Canada where the women had become deeply interested in the movement. In Brussels and afterward in Ghent, Mrs. Harbert found many delegates from different countries, each of which had started its own independent organization for the betterment of farm women. They had come with singleness of thought and purpose to cooperate with and learn from one another. The work of the International Congress of Farm Women embraces the world-wide rural home. Whatever is lacking in that home, whether it be in the home itself, its immediate surroundings, its social life, its school life, its religious life, becomes at once a problem for the congress to solve. It aims at community building, at the beautifying and brightening of the country home, at more frequent opportunity for social intercourse, at a better education for farm children, at the lightening of toil in the home, and at the raising of standards morally, mentally, physically and socially. And the women of the farms are undertaking this great work and adding interest to their organization. In Europe the government of each of the countries has made appropriations for the propagation of the movement, so that a better day seems about to dawn as a result of the untiring efforts of a plain and practical American farm woman.



MRS. BELLE VAN DORN HARBERT, FARM WOMAN, WHO HAS ATTAINED HIGH AND INTERNATIONAL HONORS.

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

A NEW YEAR'S SUGGESTION.

The Iowa Homestead looks forward to 1914 as its best and most useful year. Improvements are planned which will make this paper more interesting and more instructive to every member of the farm family. Every department will be retained; in addition, new departments will be added. Changes have recently been made in the editorial staff which promise so materially to strengthen the already strong and efficient corps of writers and editors as to make possible the best farm paper ever published, without any rival whatever. Before the year draws to a close The Homestead will be published from its magnificent new home, now in process of construction, which will be the finest and largest building devoted to agricultural journalism west of the Allegheny mountains. Mechanical equipment, in keeping with this splendid structure, will be installed, so that in every possible manner the paper, during 1914, will be improved.

We are sharing this information with our readers in the belief that it will convince them of the benefit to be derived by them by continuing their names upon our subscription list. More than that, however, we believe that with this information in their possession they will take advantage of the exceptional offers we are making and will not only send in their own renewal promptly, but will likewise send the subscription of some friend, relative or neighbor. We can guarantee a paper throughout the next twelve months so full of practical advice and so entertaining and interesting to every member of the farm household that a new standard in agricultural journalism will have been established. We do not believe that any farmer can confer a greater favor upon a friend, relative or neighbor than to induce him to subscribe to The Homestead in 1914 or send him the paper as a present. We have set ourselves to the task of improving agriculture in the grain belt and will devote ourselves to the work, in the ensuing year, in a dauntless spirit and under advantages which promise wonderful results.

To all whose names have appeared upon our subscription lists during the past year, we venture this suggestion: Send in your own renewal promptly and send with it the subscription of friend, neighbor or relative. You will then have started the new year right and will have done your share in making farming still more profitable and productive. In the hope that every one of the big and prosperous Homestead subscription family will avail himself of the suggestion, we bring 1913 to a happy conclusion with the heartfelt wish that you one and all may enjoy a happy New Year's day and a whole prosperous and joyous year.

SWEET CLOVER AS A SOIL BUILDER.

The Kansas Experiment Station says that for quick results in improving a soil, sweet clover is superior to most other crops.

Its ability to thrive well on soils lacking in humus or otherwise badly run down makes it especially adapted for this purpose. Like alfalfa, cowpeas and other legumes, it has the ability to obtain nitrogen from the air by means of the nitrogen-gathering bacteria which live in tubercles on the roots of the plants, thus adding much nitrogen to the soil in which it grows. When plowed under for green manure or allowed to remain on the land this crop is a very efficient one in building up the humus content of the soil. The large roots, which penetrate deeply, break up the lower layers of the soil and add much humus thereto when they decay, thus improving the physical condition of the soil to a considerable depth below the depth of plowing. Sandy as well as heavy clay and hard-pan soils, which would not otherwise produce satisfactory crops, may be so improved in texture by growing sweet clover for a few years that they become quite productive.

Throughout the greater portion of the corn belt, the plan of sowing sweet clover in the spring with a nurse crop, is entirely practicable when seeded at the rate of twenty pounds per acre when the hulled seed is used, though it requires three or four pounds more per acre if the unhulled seed is sown.

Sweet clover may be expected to give good results when seeded with winter wheat. In that case it should be sown early because a considerable part of the seed is very hard, and early sowing affords opportunity for the frost to crack this hard coat. Unless it is seeded in time so that considerable freezing and thawing takes place, it is advisable to give the winter wheat surface a good harrowing early in the spring. It will do the wheat good and the covering of the seed will insure a more uniform stand of sweet clover.

UNFAIR SHIPPERS' RATES.

Most of our readers are aware of the existence of what is known as the National Society of Record Associations. This is a voluntary organization of thirty of the leading registry associations in America representing a total membership of practically 100,000 breeders. One function of this organization is to bring about the adjustment of the present inequitable railway rate requirements governing the shipment of pure-bred live stock.

At the annual meeting of this association, held two weeks ago, attention was called to the fact that a stallion shipped from Chicago to Madrid, Ia., takes a minimum weight of 3,000 pounds. The rate amounts to $20, provided the shipper signs the limited live stock contract. The signing of such contract, however, binds the shipper to accept $100 as the total valuation for the animal in case of injury or death, whether the fault rests with the railroad company or not. If the actual valuation, say $1,000, be declared, the freight rate advances to $47, which is an exorbitant increase in rate even though designed simply to cover the cost of insurance. If the same stallion be shipped from Chicago to Plain City, Ohio, approximately the same distance, the minimum weight at which he will be shipped is 7,000 pounds, and the rate amounts to $31.70, providing the shipper signs the limited liability live stock contract, which requires him to accept $100 as a total compensation in case of injury or death to the horse. If the shipper declines to sign such limited liability live stock contract and ships the horse at an actual valuation of $1,000, the horse is shipped at a minimum weight of 10,000 pounds, and at one and one-half first-class rates, so that the total charge will amount to $64.50, a most exorbitant increase in rate imposed upon the shipper who declares the actual valuation.

The same conditions prevail in the shipment of breeding cattle, the only difference being in degree. In addition to the foregoing, all of the railroads are in the habit of issuing exceptions to the live stock classifications and rates, which have the effect of superseding the published tariffs and which impose additional requirements, which are a burden to the shipper in time and expense.

According to a decision of the United States Supreme Court shippers are prevented from recovering more than the value of the live stock as given in the contract unless the exorbitant rate referred to above is paid. The executive committee of the National Society of Record Associations has been endeavoring to bring about a change of this ruling by appealing directly to the officers of the railroads, but so far, no success has been attained. It is now proposed to carry the matter to the Interstate Commerce Commission, and ask that the following changes be made: for a lowering of the minimum weight or a cutting out of the exceptions to the qualifications; not requiring attendants to be in charge of live stock; that the liability assumed by common carriers be increased in the case of registered animals to $200 on horses, $150 on cattle, $50 on hogs and $50 on sheep. Furthermore, a request will be made to the Interstate Commerce Commission to have the railroads comply with the ruling whereby shippers who desire a higher valuation on their animals be allowed same by increasing the freight rate 5 per cent per each 100 per cent in valuation or fraction thereof, instead of 25 per cent increase in rate per each 100 per cent increase in valuation.

Unquestionably the breeder of pure-bred stock is at the present time too severely handicapped when it comes to shipping, and much good will be accomplished in behalf of the live stock industry if the Interstate Commerce Commission should rule favorably on these matters.

FEEDING CATTLE ONCE A DAY.

One of the most successful cattle feeders in the corn belt feeds his fattening steers but once a day. He has been engaged in the practice for a period of twelve years, and during that time has finished for market several thousand steers. His financial rating indicates that his feeding ventures have been exceedingly successful.

At the present time 450 steers are on feed, and these are making most excellent use of their time and their feed, though they are fed only in the morning. The general plan is to, first, give the steers a good feed of ensilage—just sufficient so that it is cleaned up, and yet, on the other hand, the desire is to get them pretty well satisfied. When the ensilage is all cleaned up, they are then fed what amounts to about ten pounds of corn, per head, and about five pounds of hay, per head, is placed in the racks. After this they receive no more feed of any kind until the next morning.

There are two reasons why the cattle are handled in this way. The first one is that the owner is convinced as the result of his own experimental work that just as large gains can be had from feeding once a day as can be obtained by feeding twice, while in the second place it greatly economizes labor. One man at the present time is caring for this bunch of 450 steers, so that it is apparent from this alone that economy from the standpoint of labor is included in the scheme.

In connection with this it might be of interest to recall a little experiment conducted on this farm in 1912. Two car loads of steers were sorted and supposedly the top fifteen were selected to be fed out for the Chicago International Exposition. The tail-enders, or the fifteen steers that were left after taking out the tops, were turned back into the feed lot, and were carried through the feeding period, according to the accustomed plan, which involved feeding only once a day. The exhibition load was placed in the hands of an expert, who immediately began the stuffing process, feeding two and sometimes three times a day.

All the cattle were sent to Chicago at the same time and the tail-end car load was passed by the sifting committee. When the premiums were distributed, it was found that the tail-end car-load lot received second award in their class, and the top steers, that were especially for exhibition purposes, were given third place.

We are free to admit that the good results that have come in this case from feeding once a day are more or less a surprise to us, and yet they have given such excellent returns on the farm referred to that it is quite worth while to pass along this suggestion to stockmen. If any of our readers have tried out this plan and found it either to be satisfactory or otherwise, they will confer a favor upon their fellow readers if they will send in the result of their experience.

ELECT TWO NEW DIRECTORS.

Two new district directors were elected by the Iowa State Agricultural Society at its annual meeting in Des Moines last week. Mr. C. H. Tribby, of Mount Pleasant, succeeds Mr. R. S. Johnson, of Columbus Junction, formerly in charge of the swine department of the Iowa State Fair. Mr. C. A. Tow, of Norway, succeeds Mr. E. M. Wentworth, of State Center, formerly in charge of the public safety department of the Iowa State Fair. Both the retiring directors proved efficient workers, but the theory of rotation of offices led to their elimination. Their successors are men of standing who may safely be relied upon to continue the work in an efficient manner.

Mr. C. E. Cameron, of Alta, was re-elected president, while Mr. O. A. Olson, of Forest City, was re-elected vice-president, without opposition, as were also the remaining directors, as follows: Mr. Elmer M. Reeves, of Waverly, Dean Charles F. Curtiss, of Ames, Mr. John F. Summers, of Malvern, and Mr. H. L. Pike, of Malvern.

The annual reports showed the association to be in a flourishing condition, having held its most successful and best attended state fair during the past year.

HOW TO PAINT METAL.

An enormous quantity of paint will be used by corn-belt farmers between this date and a period when spring work begins in 1914. Even though a great change has been made in the character of materials used in the construction of farm implements, whereby iron and steel have been substituted for wood, there is yet occasion to keep up the practice of painting every two or three years.

In a bulletin published by the United States Department of Agriculture it is pointed out that metal surfaces should be cleaned with soap and water, or with cloths moistened with benzine, before any attempt is made to apply paint.

Galvanized iron may be treated in the same way, but it is much better to let this material stand for some time exposed to the weather before painting. The metal portions of machinery are generally cast iron or steel; wrought iron is rarely used, though it is more durable than steel. Cast iron is not so liable to rust as steel, and also the pieces are frequently thicker than the steel portions of a machine. There is, perhaps, nothing that actually needs paint for protection as much as the steel and iron portions of machinery. Before painting such material the greatest care should be taken to get the surface perfectly clean. Do not apply paint over rust, but clean thoroughly with dry scrubbing brushes. It is a mistake to spare labor in preparing a metal surface for paint. All oil and grease should be scrupulously removed, and the metal surface should be brushed off, carefully filling all cracks.

Two or three coats of any good paint may be used. The paint which is generally supposed to protect iron from rusting better than any other is red lead. This is expensive, however, and rather hard to apply. The color also is some objection, although this can be overcome by mixing some dark pigment with it. The addition of a small amount of lampblack improves the color and the working quality of red-lead paint. A paint made of basic chromate of lead (so-called scarlet lead chromate, or American vermilion) is even better than red lead as a material for protecting iron. This also is very expensive, even more so than red lead, and while the protection is not so complete with the use of cheaper paints made of iron oxide pigments, on account of the fact that pieces of machinery are very likely to have the paint scratched and injured mechanically, it is, perhaps, best to use an iron oxide paint for most of such work, because of its cheapness. Any good oil paint will give valuable protection to iron if it is properly applied.

The heart is not easily taken out of a state that has an average of $600 in the banks and $750 worth of live stock on the farms for every family; that has property with an assessed valuation surpassed only by that of New York. Pennsylvania and Massachusetts; that in twenty years has harvested wheat worth $832,000,000 and grown corn having a value of $1,082,000,000.—From F. D. Coburn's "Annual Balance Sheet" for the state of Kansas.

LARGE YARDS FOR LIVE STOCK.

The problem of yard room for live stock on the average farm is generally solved when the farm buildings are erected. As a rule a permanent fence is thrown around the buildings, and under ordinary conditions there arises little necessity for changing the original plan.

An Illinois subscriber calls attention to the importance of having considerable yard room for live stock, and on this subject says:

About every farm barn there should be a good large yard. Before now I have seen yards that were really dangerous, being little larger than the space covered by the barn itself. No man would think of turning a lot of cows loose in a stable. He would know that it would be no time before there would be trouble between the different members of the herd and that some cow might be seriously, if not fatally injured. And yet, some men will turn their cows out into a little enclosure very little larger than the barn stable and think it strange that the cows do not get along well there.

There is in nearly every herd some cow that is inclined to want to be boss. The disposition to lord it over something or somebody seems to be in most men and animals. Especially if we have a cow that has recently come into the herd, she naturally expects to have to establish her position as a fighter before she will have any peace.

I have known cows under such circumstances to fight until they were just about used up. One cow we had was not as good as she should have been for a long time, just because she was of a bellicose nature. We kept her shut up in the stable and tried to make her forget this grudge she seemed to have against other members of the herd, but the moment we let her out again, she would go right at it, seemingly just where she left off. She was lame and sore all over, and I was afraid she would be permanently hurt.

The best way to avoid such conflicts between cattle is to give them plenty of room to move about in. Then if some one cow should make a dive for another, she would have a chance to escape without much trouble.

Then, too, there is this added gain in having plenty of room in the yard. Stirring about, particularly on bright sunny days, is a fine thing from a health point of view. A still, dull, listless cow is rather apt to be a poor one I want my cows to act as if they had some life about them.

By this I do not mean that they should not have times when they will like to stand still and drink in the air and sunshine and "let comfort hang out." I love to see nothing more than I do a herd of cows on a bright winter day standing in the sunlight, heads down, chewing the cud and evidently taking all possible comfort.

But this ought to be for only a comparatively short time. To be at their best cows should be bright, alert, active, ready for anything that may happen. Moving about keeps the blood circulating and prevents taking cold. Exercise promotes heavier breathing, and breathing burns up waste matter thrown off through the lungs and creates capacity for more food, which is converted into milk and butter.

I never had healthier cows than when they had to go a mile to drink every day. I used to turn them out when the snow was coming down and the wind blowing hard. They hated sometimes to face the gale, but they would down their heads and hurry away, coming back on the run. Then I would wipe them dry at once, rubbing their bodies and legs until they were all dry and warm and how they did go at the feed I had placed before them! The outing had done them all sorts of good. I was the gainer by it.

While it is true that the best interests of the herd require considerable space to move around, yet on the other hand, there is a tremendous loss of fertility if the yard is too large. Since dehorning has come to be generally practiced, there is less fighting in the herd, and for that reason there is some advantage in having a yard just large enough, so that it can be well covered with straw, and in turn all the manure conserved.

For exercise, far better throw open a gate, and let the cattle go into the fields because then fertility is placed where it will do some good. On the other hand where a yard is two or three hundred feet square, the greater part of the manure that accumulates under these conditions is lost because it never reaches the field.

CURING PORK PRODUCTS WITH BRINE.

An Illinois subscriber gives his method of curing pork products in brine. He calls attention to the fact that a great many of his neighbors cure their meat in brine instead of salting it down in a box. According to his plan, to fifty gallons of rain water should be added, twenty-five pounds of good barrel salt, eight pounds of granulated sugar, two ounces of cayenne pepper and two ounces of saltpeter.

Boil until all impurities rise to the top, then skim off. After cooling pour into wooden meat barrels. Do not put the meat into the brine until sure all animal heat is out and it has been trimmed to right size. Put the hams and shoulders into the bottom of the barrel with the sides on top and weight down so that no meat projects above the brine.

Let the meat remain in the brine for three weeks, then remove and smoke. If the meat happens to be a little too salty, put it into a barrel of fresh water for a couple of days. Hickory wood makes the best smoke for meat. Keep the fire smothered so that it will make a dense smoke. Then the meat may be put away in sacks after thoroughly rubbing it with black or cayenne pepper.

FANNING MILL IMPROVES GRAIN.

A subscriber at Ozark, Ill., points out some of the benefits that are derived from the sensible use of the fanning mill in grading grain. On this subject he says:

I have observed throughout this section of the country quite a contrast between adjoining grain fields. One will have grain with full heads, while the other, on land of the same character and value, will have a crop of very thin and sickly grain almost crowded out by the growth of wild grass and weeds. When such conditions come under my notice I invariably make inquiry to find the explanation and generally learn that the good crop has been produced from seed which went through a fanning mill. One man has used dirty, foul seed, while the other has run his through a good mill, perhaps has run it through twice. The result is that he has sown pure, clean seed, no weeds, no cheat, and all of one quality. This insures him not only a crop of like grain, but a much larger yield. A drill, no matter how good it may be, cannot distribute poorly graded seed evenly, for some will be light and chaffy, while others will be heavy and plump and the distribution, therefore, will be irregular.

The modern threshing machine separates the grain from the chaff and does the job very well, but the business of the fanning mill is to grade the seed-grain so that the seed will be all of the same size and weight or as nearly as possible. This may be drilled evenly, and of course such seed is more likely to germinate. It is easy, therefore, to see that the fanning mill is almost a necessity for the farmer who grows small grain.

Say a farmer has 500 bushels wheat and wants fifty bushels of seed. He can adjust his fanning mill so that he will take the cream of his wheat for seed and in all probability the remainder will sell for just as good a price per bushel at the elevator as it would had the seed not been taken. Such seed is well worth $3 per bushel to the farmer. It is just as important to sow the best seed as it is to breed the best stock. Plant breeding is just as important as animal breeding, and the intelligent farmer is coming to realize this as never before.

With proper care a fanning mill on the average farm, counting first cost and interest on same, will clean enough grain before it is worn out to make the cost less than one-tenth of a cent a bushel. There are fanning mills for farm use that will handle more than forty bushels per hour, but in view of my experience I believe that if two men clean ten bushels of wheat or oats for seed in an hour, and do it properly, they will do well. Figured at this low rate, see how very little it will cost to use the fanning mill, the benefits of it considered, we have known farmers to pay for a fanning mill in two or three seasons simply by cleaning grass seed out of the chaff from the mow. Some of the later mills are fitted with graders for grading seed corn and we all know how important it is to grade the seed.

This endorsement of the fanning mill is by no means too strong. The sowing of good plump grain year after year is the one practical plan that may be adopted by farmers to prevent grain from running out. One of the Canadian experiment stations has been working on this problem for a quarter of a century, and that station has demonstrated beyond any possibility of doubt that grain does not degenerate or run out if it is well graded every year. In all the older countries where agriculture has been carried on for centuries, the principle of grading grain is understood by all farmers, and the practice is universal in those countries. The man who does not grade his small grain is imposing on himself an unjustifiable handicap, which must ultimately lead to one of two things, the changing of the varieties of grain every few years, or, on the other hand, he must suffer the loss that naturally comes from the degeneration of his grain.

SWEET CLOVER FOR PASTURES.

A number of subscribers have asked for information concerning the value of sweet clover when used for pasture purposes. In most instances those who make such inquiries have had no experience with the crop whatever, and, therefore, they are seeking information that is specific in character. In his book on sweet clover, Mr. J. F. Sinn deals with the pasture question in this way:

When seeded for pasture sweet clover is generally seeded without a nurse crop, for then you can turn the stock on it just as soon as it gets up four or five inches high. It is best to turn the stock upon it while young, for it contains less cumarin and they will learn to eat it without difficulty. It is also well to pasture it without difficulty. It is also well to pasture it, for it causes more shoots to start up, making much better pasture than to allow it to grow up coarse and become woody. The first season it is not necessary to allow it to grow up, for it may be pastured close to the ground, as it will not be damaged and will come on again very early in the spring. One of the great advantages of sweet clover as a pasture is the fact of its coming on earlier in the spring than any other grass, with the possible exception of alfalfa, and in two weeks' time; on account of its more rapid growth it is even ahead of alfalfa. The easiest way to have stock become accustomed to eating sweet clover is by turning them on to the pasture early in the spring before other green grass has started. By doing this they form an appetite for the plant, eating it with great relish, and you will have no further trouble along this line,

Sweet clover pasture is adapted to all kinds of stock, horses, cattle, sheep, hogs and chickens do equally well on it. It is better to keep enough stock on the pasture to eat it off closely so as to cause it to form an abundance of new shoots, as you will get more feed off the pasture and stock will relish the tender plants much more. But you must remember the second year it is necessary to let it grow up enough in the fall, so as to form seed and re-seed itself. It can be pastured lightly through August and September, but if no seed is allowed to form it will not continue long as a pasture.

There are two great advantages of sweet clover as a pasture, and that is it comes on earlier than other green feed and it does not cause bloating of stock as do clover and alfalfa. This is due to, the cumarin, the bitter principle which the plant possesses, which is of great importance to the stock raiser. Cumarin has been used by druggists and physicians for thousands of years as a corrective, tonic and curative for intestinal disorders, and on this account it is considered extra fine for pasture, as stock keep in the best of health and condition when pasturing on it. Stock make great gains on sweet clover pasture. It is fully equal to either clover or alfalfa. Another advantage of sweet clover is that it will grow on soil that would not grow other grasses sufficiently to secure much feed. But sweet clover will make a food growth on poor soil, affording the best pasture for all kinds of stock and at the same time adds humus to the soil, building it up and fertilizing it to such an extent that other crops may be grown successfully when ready to rotate crops. Sweet clover is to be recommended to the sheep grower, especially of the West, for this plant will grow on thin, barren waste land, enduring the hot, dry summers, and will make a great amount of the best green feed. By careful experiments it has been found that sheep make great gains when allowed to graze upon it, there being no feed better adapted to them.

According to this advice, the sowing of sweet clover would solve the problem for those whose whole pastures were burned up last year, and who are, therefore, likely to be short of grazing land. The crop has been sufficiently tested with all kinds of stock to absolutely give assurance to those who use it, that any dislike animals have for it soon disappears if they are compelled to graze on it. Furthermore, there is an advantage to which Mr. Sinn calls attention, viz., it does not induce bloating, which is sometimes the case where alfalfa or red clover is pastured. As to the actual amount of seed required when it is sown without a nurse crop, we will say that in all probability it will pay to use twenty-five pounds of hulled seed per acre, though ordinarily twenty pounds of seed is sufficient when a nurse crop is used.

IMMEDIATE PROFITS IN CATTLE FEEDING.

More and more men are being convinced that the purchasing of a bunch of stock cattle and the finishing of the same for market is a speculative game, rather than a business proposition. This is not equivalent to saying that the exceptional man cannot carry on this practice and make a direct profit from his venture. The finishing of cattle on high-priced land, however, is being carried on by an increasingly large number of men who believe that the business is only profitable indirectly because of the effect on soil fertility.

An instance was called to our attention recently where a worn-out farm was brought up from a poverty-stricken condition in four years by applying manure, and growing legumes to the point where the gross production in 1913 was $92.00 per acre. In this case the alfalfa crop was used as a medium, and hogs the agency by which this crop was converted into pure money. The theory of this stockman has always been that direct profits from cattle feeding operations were only incidental, and that the returning of manures to the land, and the growing of such crops as alfalfa lead to such an enormous increase in productivity of the land that this increase, apart from the direct profits, more than justifies the carrying out of the policy.

This doctrine has been worked out in the older countries, so that it is by no means a novelty, and it is in no sense experimental. It may be carried out on a great variety of plans, including as it does either the system of breeding one's own cattle, and finishing them at an early age, or, on the other hand, purchasing grown cattle, and finishing them as the result of either a short or long feeding period. The nub of the whole matter is simply this, that stockmen must sooner or later fix on some system whereby the roughness, or what might be called waste, of the farm is utilized. With most corn-belt lands it is possible to double the yield of grain even during one rotation period, and when the waste of the farm is sensibly used, it might be practicable, under certain conditions, to sell grain and yet maintain, or further increase, the productivity.

God Bless Us Every One!

"GOD bless us every one!" prayed Tiny Tim,
Crippled and dwarfed of body, yet so tall
Of soul, we tiptoe earth to look on him,
High towering over all.

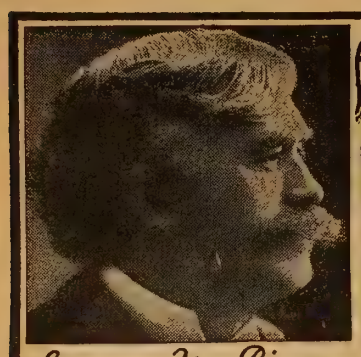
He loved the loveless world, nor dreamed indeed
That it at best could give to him, the while,
But pitying glances, when his only need
Was but a cheery smile.

And thus he prayed, "God bless us every one!"
Enfolding all the creeds within the span
Of his child-heart; and so, despising none,
Was nearer saint than man.

I like to fancy God, in Paradise,
Lifting a finger o'er the rhythmic swing
Of chiming harp and song, with eager eyes
Turned earthward, listening—

The Anthem stilled—the Angels leaning there
Above the golden walls—the morning sun
Of Christmas bursting flower-like with the prayer,
"God bless us every one!"

—James Whitcomb Riley.



James M. Pierce

THE PUBLISHER'S VIEWS ON TOPICS of THE TIME

THE NEW YEAR'S PROGRAM.

I LIKE to think of New Year's on the farm as a day when every farmer shakes hands with his neighbor and pledges himself to make the coming year a better one, in every way. Not alone in the matter of increased crop yields, but in improved community spirit, patriotic interest in every public question, unselfish devotion to the common good. Never before, it seems to me, were we in such splendid condition to make the coming year the very best of all.

Stop just a moment and reflect upon what we have accomplished in the year now closing. Last summer, some of us were inclined to be blue; we scanned the sky anxiously for rain, but none came. We began to talk of hard times; in some parts of the country, notably in the Southwest, we rushed our cattle to market in a hysteria of fear; we piled trouble upon worry and made a sorry condition of affairs, indeed. But the harvest came on apace, and some way or other our troubles and worries did not seem so great; we began to see visions of pulling through, after all; we began to smile now and then, one or two of us were even guilty of whistling, when we were sure nobody was listening.

And now, as the year comes to an end, what do we find our condition to be? Never so good. Let's call the roll of just a few of the states in which you and I are particularly interested. First, Iowa: corn crop worth the most in all its history. Next, Kansas: greatest wheat crop ever grown, 50 per cent more than was grown by any other state. Next, Missouri: wheat yield almost 15,000,000 bushels greater than last year. Next, Wisconsin: marketed $100,000,000 worth of dairy products during the year, the greatest total in all its history. And so on, throughout the entire roll of honor for the grain belt. Doesn't sound like calamity or hard times, does it? Sounds to me like the golden chink of many dollars, with the good, ringing cheer of farm fellowship blending most harmoniously.

And what are the prospects? In every state farmers are looking forward to 1914 as a year of unsurpassed opportunity. There are prospects a-plenty of unusual crop yields. Prices for farm produce have not been so high in many years. The prosperity that we are enjoying, after a little period of uncertainty and worrying, promises not only to continue, but to increase. Surely, you and I can look forward to the new year as to one of the best, busiest and happiest of our lives.

But we must not stop with these material things. We have done much to improve conditions; there remains much yet to be done. We must pass our prosperity around. It not only devolves upon us to raise bumper crops of corn and oats and wheat and so on; to breed our herds up to a higher standard of efficiency; we must all join hands and make the grain belt a still better place in which to live and to bring up our families. We must turn our attention to social problems. We must see to it that our farms, in all their diversity of yields and crops, are standardized, so that there may no longer be the extremes of bounteous harvests and barren ones—that the checkerboard of our community shall not show alternate fields of big yields and meager ones, but that each square in the board shall be a golden one, alternating only in the deepness of the rich yellow harvest—and the average of prosperity shall be well maintained. We must see to it that national problems receive their proper attention, that we give of our time to help our fellow men, that those reforms (political, as well as social) which we enjoy ourselves shall be spread and shared among our fellow Americans. We must see to it that the blessings which we enjoy become general, so that life may be richer and sweeter to all mankind.

It is a big program, isn't it, for one short year? But if you and I will just join hands on New Year's day and pledge each other our heartfelt, unswerving co-operation and loyalty, by the time another New Year's day rolls around we can look back upon a year of achievement which will stand without a rival, not only in our own lives, but in the history of our beloved country.

And so I come to you today, into each and every farm home where my words carry, with this message: A happy New Year to you and yours, a whole year of prosperity and contentment, a whole year of devoted service one to the other, to the end that we may all be better off, with the inner consciousness of good work well done.

CREDIT FOR THE VICTORY.

ONE fact should not be lost sight of, in the motion for presidential primaries, which the democrats, the progressives and the republicans have now made unanimous. That fact is this: The movement to bring about this reform found its beginning among the farmers of the grain belt.

Of the small handful of states which held presidential primaries last year four belong to the grain belt. No other section of the country—New England, Pacific Northwest, Rocky Mountain district, South, or Atlantic coast—showed so large a number of states granting the voters this all-too-long-withheld right. In North Dakota, Wisconsin, Illinois and Nebraska, presidential primaries were held a year ago last spring, in each and every case the victory being for the radical element of the various parties.

But this is not all. Before President Wilson gave an unexpected impetus to the movement, three presidential primary bills had been introduced in congress. Each and every one of the three was introduced by a grain-belt congressman, the states represented being Iowa, Kansas and Nebraska. Senator Bristow, of Kansas, calls attention to the fact that President Wilson's plan is practically a copy of the Kansas state primary law, which he embodied in bills introduced in the last two sessions of congress. Senator Cummins, of Iowa, tried to get the senate to consider presidential primary legislation, with the result that a year and a half ago his bill was referred to the privileges and elections committee, where it was smothered. Senator Norris, of Nebraska, likewise introduced a presidential primary bill in the last regular session of congress. Here, then, we have the representatives of three grain-belt states blazing the path for a reform which the entire country now seems eager to adopt. The list is made still more notable by reason of the fact that since President Wilson's endorsement it has been announced that a bill embodying his ideas will be introduced by still another grain-belt representative: Senator Owen, of Oklahoma. Four grain-belt states actually holding presidential primaries last year, three others leading the fight in Congress; here, surely, the grain belt has set the country a patriotic, non-partisan example which it now seems ready and anxious to follow.

The question naturally arises, why has it been that the grain belt has so taken the lead in this campaign? It is because it has been spurred into leadership by the farmer vote. Studying men and measures in the calm, reflective light of communal needs, the farmer has been able to find no reason why the individual voter is not as well qualified to select the nominees for president as for governor, judges, and all the other officials, high and low. While the rest of the country was arguing that the people had neither the time, the intelligence nor the determination sufficient properly to select their presidents, the grain-belt farmer went ahead, securing for himself this very right and by careful discrimination, conscientious reflection and patriotic action proving that the privilege was well deserved. In thus securing and justifying the presidential primary the farmers of the grain belt have rendered the country a real service of lasting value, which stands as an inspiration and an object lesson in the stability of the principles upon which our government is founded.

I firmly believe the national presidential primary will be brought about within the next year, so that never again will the nation witness such a disgraceful perversion of the people's will as characterized the 1912 nominating campaigns. I am just as firmly convinced that the credit for this great reform belongs to the farmer, for it was he who made the first breach in the century-old wall of conservatism and then stood up before the nation and showed that what he had won for himself should be given to all his fellow men. I am proud of the part the grain-belt farmer has played in this all-important matter. It makes me feel assured of the safety and continued prosperity of our beloved country, so long as the balance of power is held by the man who is influenced by national needs rather than party spoils, who considers men and measures in the light of patriotic service and communal welfare, rather than individual ambition or partisan victory; the man who really and truly represents the ideals upon which this nation was founded: the farmer.

CORN MEAL MUSH.

IT MAY seem as though I were engaged in "carrying coals to Newcastle," yet I cannot help urging on all my farmer friends the advisability of writing to the department of agriculture, at Washington, and securing Farmers' Bulletin No. 559, in which attention is directed to the freer uses of corn as one of our national nutrients possessing high value. I am very much afraid that here in the grain belt, where we look upon corn more as animal food than as a very palatable and delightful food for ourselves, we are overlooking some gastronomic possibilities which would make us healthier, happier and richer.

I was quite interested the other evening, in reading a daily newspaper published back in my home state, Ohio, to run across an editorial dealing with corn meal. And what do you think the editor, a city man, with all the range of seasonable delicacies in a near-by grocery store to choose from, selected for his favorite dish? Corn meal mush! Here is the tribute he paid to it:

> A good bowl of mush and milk—how good it sounds and how good it is! Take a great spoonful of it and it twangs the strings of the harp of health till every little fiber and nerve falls into a beautiful melody of life.

Doesn't that sound alluring? If you read that about some choice delicacy never grown or known outside of the South Sea Islands you would be eager to try it. But because we grow billions of bushels of corn right here at home you turn up your nose at anything so common as corn meal mush. Well, for my part I can tell you this: I have traveled around the world and eaten of the delicacies of many lands, paying for some of them outrageously high prices, but I have yet to eat anything more ambrosial than a bowl of corn meal mush, well sprinkled over with sugar and swimming in good, rich cream. It not only sounds good, it tastes good. And, best of all, it does us good.

So just take my advice and write off to Washington for Farmers' Bulletin No. 559. It will not cost you a cent and it will open your eyes to corn concoctions and delicacies that will make you think your life before you tasted them was one long, aching void.

James M. Pierce

ARGUES FOR THE FARM SCALE.

An Illinois subscriber brings up the question of farm scales, and endorses their use in strong terms. On this subject he says:

A set of scales is an absolute necessity on a well-managed farm, in order that the farmer may obtain the correct returns from his products. I have found this to be true with my own experience, for I have been using scales for a number of years, and I believe that I am safe in stating that the farmer who has none will make a very profitable investment by purchasing a small platform scale and making use of it to ascertain the correct weight of his hay, grain, potatoes and live stock before they are taken to the market.

David Rankin, the famous Missouri farmer and stockman, always advocated the use of scales in feeding farm animals. Some years ago the winner of the grand sweepstake prize for the best steer exhibited at the International Live Stock Exposition, said that in raising this animal he had weighed its feed and also weighed the steer twice a week. He said that he would no more try to feed farm animals without scales than he would try to sell sugar or coffee without the means of weighing them. Mr. Rankin very emphatically expressed his approval on this proposition.

I am of the opinion that many farmers lose enough in the course of a year, from their lack of knowledge of the weights of their products, to pay for a set of scales. This is one of the reasons why many farmers fall short of success. A short time ago I was in a local hog and cattle market. I met a farmer who had just sold some hogs and steers. He said: "I am certain that there has been a serious mistake made in weighing these animals by the parties who bought them. If I had possessed a set of scales I am sure I would have saved the cost by getting the correct weights on this one lot of cattle."

First-class platform scales, weighing from four to six tons can be purchased at from $50 to $100. There is pleasure and satisfaction in having such a convenience on the farm, always ready for use, to say nothing of the saving which with most farmers would equal the cost of the scales the first year or two.

Farming without scales is like shooting in the dark, very uncertain. The farmer who sells his hay in the rick his corn in the crib, or his hogs by guess, either defrauds himself or someone else. The farmer who relies upon his scales knows when he is getting a fair deal, and he knows whether his cows are producers or just "boarders." "None is so foolish as he who fools himself." The best farmer does not guess, he knows, and the scales help him to know. If there is not a scale on every farm, there should be at least one in every community.

Within the last few months we have heard considerable growling about the weights of feeding cattle that have been shipped back to the country from the stock yards, the buyer of the cattle in these instances being fully persuaded that grievous errors have been made. Many a corn-belt feeder has purchased a car load or two at the central market, shipped them to the country, fed them out, and these steers have never been on the scale until they were driven over it when finished. Under these conditions the feeder is working very largely in the dark. He has possibly fed a whole month or even six weeks before the steers were as heavy as they were when purchased in the yards, and this, in many cases, is sufficient to wipe out all the profit. Of course, the scale does not increase the weight, but it makes the work of stockmen more intelligible. While there are a great variety of farm products that should be weighed before leaving the farm, it cannot be too strongly emphasized that the stockman is tremendously handicapped who is without a good farm scale.

Federal aid for highways throughout the United States, unless planned upon some comprehensive system, was not favored by those who addressed the tenth annual convention of the American Road Builders' Association.

THE EXPERIENCE MEETING

Facts Learned by Busy Homestead Workers Passed Along for the Profit and Pleasure of Others, to the End That Farming May Be Made Easier and More Productive.

INVITATION TO A GOOD MEETING.

To the Editor:

The annual meeting of the Iowa Agricultural Experiment Association will be held at the Iowa Agricultural College on Tuesday, January 6th. As secretary of this association I take great pleasure in extending an invitation to the readers of The Iowa Homestead. This young association has already 900 members engaged in co-operative experimental work. The results of their work during 1913 will be summarized and presented at this annual meeting and I know after making a close examination of all reports sent in that there will be some very interesting things come up for discussion.

In addition to receiving the reports a full program will be carried out and addresses by such men as Prof. C. F. Curtiss, Geo. M. Allee, L. C. Burnett, Mr. E. J. Mildenstein, M. L. Mosher, C. W. Hunt, F. E. Jamison, W. A. Posey, Prof. H. D. Hughs, A. A. Burger and Prof. C. B. Norgord, of Madison, Wisconsin. I desire to call special attention to the fact that Professor Norgord has been connected with work of a similar organization in the state of Wisconsin and he will give the results of his experience during the eleven-year period since the Wisconsin organization was established.

The program as already outlined gives a good deal of attention to the growing of alfalfa and also to the hog-cholera problem because several county agents have made great headway in the fight against this disease. We ought to start out the new year with twice our present membership. Such an addition as this would mean much to Iowa's agriculture because the farm experiments that are being carried on by the members lead to much better results and to more definite conclusions than if the same kind of work were carried on at the experiment station. John Buchanan.

Iowa Agricultural College, Ames, Ia.

LET THE FARMER ALONE.

To the Editor:

I am one of these old timers and not so quick to see into this boosting and tax raising as many others are. I believe in letting the farmer alone. Keep away with your state aid; keep away with letting every Tom, Dick and Harry tinker with the farmer's business?

It all has to come out of the farm ultimately. We have one state road running across our township established a year ago and taxes raised 20 per cent. Some city guy took it in his head that the road should be changed a mile south and a slough forty rods wide graded, a railroad crossed and finally the whole length of about three miles graveled at the expense of the taxpayers.

Now let me ask where the notion for such expenditure originated. Can anyone say it originated with the people, the taxpayers? Never. Did such a move originate with the newspaper men? Never.

Where did it originate? An open question. I see in the Minneapolis Tribune of November 9th, a Minnesota school superintendent bewailing the solemn and monotonous condition of the farm children, and he says they have no time for play, and never smile or get a smile from their parents. I am a bachelor, thirty-seven years old. My parents came to this country in 1881 and went through the hardest of hard pioneer life, penniless, with a family of eleven children. When they were situated so that they could possibly commence to live, they died leaving the farm with the debts. I thought I had worked too hard to run, and tried my best, with a younger brother, to stay. All the rest of the family went. I held out bravely batching, but some one of the others got it into his head that the cattle, horses and what was on the place, should be sold and he said, "Rudolf, (the younger brother), can come to us and you (meaning the writer) can make your living working."

Just as he said, so it was done. The property was advertised to be sold and the farm was rented. The result is I have worked out for nine years. None of us are so well off that we can say we are out of debt. I am owner of the old farm, but we owe $1,650 with interest having accumulated in nine years, working out, and, partly by venture, in buying and selling enough to pay down on the old home place I can hold it and hang my hat on a nail and call it home. Smile! Could you? I want to say one thing and that is leave the farmer alone!

Ward Coshington.

Watonwan County, Minn.

WART ON COLT'S LEG.

To the Editor:

I see in last week's Homestead that some one has a colt with a bleeding wart on its leg. I think if he will apply butter of antimony on the wart it will take it off. Some years ago I had a horse that had a wart just below the knee cap. I took him to a veterinarian. He called it a rose cancer wart, and the first thing he did was to cord it. Then in a week or so he cut it off. Gee! How it bled. He then cauterized it with a hot iron, but it soon came back as bad as ever. A neighbor told me to apply butter of antimony, which I did, and it took it off, and it healed up and haired over nicely, and never came back. I have tried this remedy in two other cases, and it effected a cure in both cases.

W. J. Wood.

Montgomery County, Iowa.

MEASURING CORN.

To the Editor:

In a recent issue of your paper you ask for opinions and methods of measuring corn. I live in the corn belt of central Illinois, where frost seldom nips the corn, and a great quantity is measured on the rule 3,888, being that many cubic inches in a bushel. Very seldom does it weigh, when shelled at fifty-six pounds, as much as it will measure, usually losing from five to ten bushels on 100. On the other hand, we sell corn on cob by weight, seventy pounds to the bushel, but it usually overruns when shelled.

Cass County, Ill. Willis T. Davis.

SETTING CORNER POSTS.

To the Editor:

I have a new way of setting my corner posts which is the strongest I have ever seen, and can recommend it. I have put two sets of Page fence stretchers on it, and have failed to shake it. Set end post four feet deep, and brace post three feet deep, eight feet from the end post. Now take a 4x4 and make a notch in both the end and brace post two and one-half feet above the ground to fit this 4x4 into. Nail it slightly to hold it in place. Then take a smaller post (sawed) and set two feet deep, half way between the end and brace posts, and long enough to reach to the under side of the 4x4, which should be notched one and one-half inches on the under side of the 4x4 to receive the top of the sawed post. Nail top side of the 4x4 to the top of sawed post with two twenty-penny nails. Then take good guy wire (double) from the ground at the end post to the top of 4x4 at the top of sawed post or center post. Twist wire until it becomes taut, then take a like wire and fasten to the sawed post at the ground, and run it around the brace post four inches above the 4x4. Twist taut and I will guarantee that no fence stretcher made will even loosen it so you can see any crack in the ground around the posts, for if one part of it moves the least bit, the rest has to move with it. In soft soil this is the only brace I ever saw that would. Willis T. Davis.

Cass County, Ill.

GASOLINE ENGINES IN COLD WEATHER.

To the Editor:

At this time of year gasoline engines always give the farmers more or less trouble in starting, but when run a short time after started they heat up and when proper temperature is reached the good results are again obtained.

When adjusted for conditions an engine will start almost as easily twenty degrees below zero as in warm weather.

If your engine has a carburetor prime it. If this fails, note the position of the needle valves, open it, start the engine and, when properly working, turn back to its original setting. If this will not start the engine saturate a piece of cloth or waste with gasoline and hold over the intake valve. With the engine in proper working condition this will always start it. However, should this fail, heating the carburetor with warm water and pouring warm water into the cooler (should the engine be water-cooled) will also be found helpful. When the engine uses no carburetor, but some form of mixing valve, the same operation may be resorted to and where the type of valve permits it, squirt in a few drops of gasoline with a pruning can which will prove very effective.

When the weather is cool the oil becomes non-fluid and will not flow fast enough unless a mechanical lubricator is used; however, very few gasoline engines have a mechanical lubricator, so the opening for the oil must be made larger.

Where the ordinary lubricator is used the feed may be adjusted by the upper adjusting screw, under ordinary conditions, but when the weather drops down to zero, or lower, it is best to leave the lubricator at the original adjustment and warm it until the oil flows freely.

Never use an engine unless you are sure it is receiving enough lubricating oil because without it, you are running the risk of ruining the piston, cylinder and rings, three essential parts which must fit tight and the results of their cutting out will ruin the compression.

Never heat the lubricator or carburetor of your engine with an open flame. While some people resort to heating the carburetor with a blow-torch, it is, nevertheless, very poor practice, and if continued its results are always serious sooner or later. People are very often burned to death while attempting it, so heed the experience of others.

It is all right to run a water-cooled engine without water for a short time at light work, as pumping water, etc., when the weather is cold, but the engine should be watched to prevent the possibility of overheating and when long or heavy runs are necessary always supply water and don't forget to drain when work is done. A good anti-freezing compound may be made of two parts water and one part alcohol, which proves very effective under all average conditions.

"THE EXPERIENCE MEETING" has been made a regular department and the co-operation of every Homestead reader is requested. Already the letters from farmers are pouring in, but more are wanted. Write us your experiences in any line of farm work, how you increased your yield, how you lessened your labors, how you added to the family comforts or pleasures. Your name will not be printed, if you say so, but sign your right name and give your address. "The Experience Meeting" will be the forum of the farmers of the grain belt. Send us a letter today.

FINDS SORGHUM PROFITABLE.

To the Editor:

One of the best feeds coming under my observation is early amber sorghum. It is particularly good until the latter part of January, after which time I believe it deteriorates in feeding value.

In August before the fall rain and after the pastures become short, in order to prevent the stock from losing flesh, some feed is necessary, particularly if the pastures have been kept close all the season. Nothing is better than a few armfuls of sorghum freshly cut. This produces more feed to the acre than green corn, while not affected as much by the dry weather. A person does hate to commence winter with a bunch of thin stock.

After twelve years' experience in feeding this I am more than pleased with the results every year and wonder why every one who has only a cow and team does not plant at least a few rows in the corner of some field, or on a lot, one planting if not more.

In all my experience I only lost one animal from eating too much and I have fed all they would eat. That one loss was due to changing feeders when the stock was not used to the feed, the second person feeding too much. In feeding sorghum green, one should not feed calves and hogs in the same lot for, as in the case of green corn, the calves might eat some of the stalks chewed by the hogs, which is fatal to calves.

Another precaution to observe is to have an extra good fence around the field in which the sorghum is planted, as in a very few minutes stock can eat enough to fill them. At present I have a bunch of Angus calves that I am feeding almost a peck each, twice a day after the feed has been run through a feed cutter. With this I am mixing ground corn and cob meal. They clear up the sorghum save a few coarse pieces.

I feed the seed with the stalk, but some clover hay in connection, for I do not think sorghum a "complete" feed, though stock will live upon it. While feeding in the milder weather, feed in the pasture, but never in the same place, because, while it does not hurt the grass, it saves hauling the manure.

In the fall just before frost a little, if the seed is black, I generally cut with a corn binder, if possible, but at times it has been blown down or was planted too thick so the binder could not handle it. Then I cut with a corn knife. In either case, I shock like corn, but in shocks twelve hills square, which this year cost me twice as much as corn sixteen hills square, part of the field being so heavy that I could not use the binder. When the crop is standing, the cost of cutting by hand is but little more than corn besides coming after the corn is cut.

It makes a good crop in a wet year, while in a day, one like the past, it is certain to make a crop, in spite of the fact that corn failed to make one-half the usual yield.

In making plans for next year's crop include, at least, an acre of sorghum. For my part, I shall continue to raise it until I can find another feed that will produce as much feed regardless of weather conditions.

V. E. Lawrence.

FAVORS WIDE-TIRED WAGONS.

To the Editor:

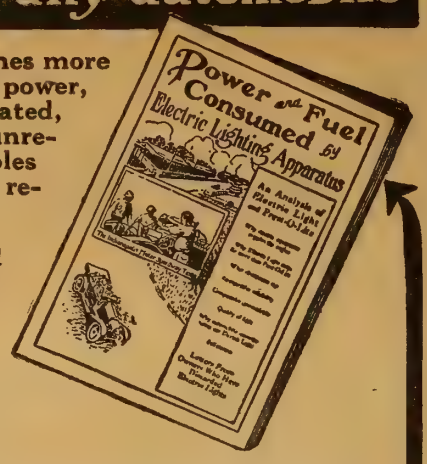
I noticed in the paper the other day that a man had hauled two tons on a wide-tired wagon that pulled a great deal harder than the two tons did on a narrow-tired wagon. He was right; but if all the farmers and teamsters that haul loads would use four-inch tires, and not allow a load hauled on a narrow-tired wagon, we would have the nicest roads one could travel on. It would be quite an expense to change, but not much more than the extra road work costs us.

Benton County, Ark. Wm. Booth.

Read This Free Book
about all lighting systems before you buy any automobile

Electric light costs five times more than gas light, robs a car of power, makes it heavy and complicated, eats up gasoline and tires, is unreliable, and has many troubles that only a factory expert can repair.

This book proves it, and shows why. Let us send it to you free.



This book tells why automobile electric light costs five to ten times more to use than Prest-O-Lite, and gives the testimony of automobile owners who have used both systems.

It tells why electric lighting makes a car heavy and expensive to operate, robs the engine of power, cuts down the speed of the car and cripples it on the hills.

It gives a full report of the Motor Speedway Tests, showing that electric apparatus consumes **over 10% of the power and fuel** used in medium-priced cars.

It shows how you can test this matter for yourself.

It tells why people, who want power, light weight, low tire expense, low up-keep cost, greater efficiency, greater safety, and better light at less expense, should buy a car designed to carry gas lighting.

Are you an expert electrician?

This book shows why the average dealer—why even the average electrician—cannot give repair service on electric systems, and why, in case of trouble, you would have to depend upon a factory expert, hundreds of miles away.

It gives the statements of electricians and electrical engineers who use and prefer Prest-O-Lite on their own cars.

It gives sample pages from the Instruction Books for the care of electric systems, so you can see what you are bargaining for before buying a system which needs more expert and more constant attention than the automobile engine itself.

It shows why Prest-O-Lite gives better practical road light than electricity.

Equal convenience at less expense

This book tells how gas can be burned in all five lamps, and lit and extinguished from the driver's seat, with all the convenience of electricity, with only a small fraction of the expense, and is ten times more reliable.

It tells why automobile manufacturers use electric lights against their wishes and against their better judgment.

It discusses self-starters, of all kinds.

It gives a mass of letters from owners of all kinds of cars, who have had electric lights **torn out of their cars**—tells their own experience in their own language.

Automobile owners everywhere have been waiting for this information. It has taken us a long time and cost us a lot of money to get it. But it costs you nothing. It is free—yours for the asking.

No matter what car you have in mind, no matter what equipment you're thinking of, read this remarkable book first.

It isn't "technical"—we have nothing to hide. It is written in plain language—easy to read and understand. And it makes the whole subject clear as daylight.

If any dealer is trying to saddle an electric system on you, READ THIS BOOK, and you can then put him into a corner and make him admit that gas light is the only sensible light for automobiles.

The safety of your family

Don't stake the safety of your family on lights that may fail instantly and without warning at any time. Prest-O-Lite is the one lighting system upon which you can absolutely depend, on high-banked roads, slippery roads, rough roads—anywhere and all the time. If you don't know why, READ THIS BOOK.

Send us a letter or a postal, and we'll send you this free book by return mail.

Better tear out the coupon now, so it won't slip your mind.

FARM FURROWS
TURNED BY A PRACTICAL FARMER

Turn the lens of your faultfinder upon your own life for a little while now and then and you will not be so keen to keep it in operation all the time.

Carrying around with you all the time a grudge against somebody is worse than filling your pockets with dead rats and expecting to be welcome wherever you go.

Labor trouble is now the bane of the city working man. Just as the day-laborer begins to lay up some towards a home, he suddenly finds himself confronted with a strike, which may mean several months of idleness.

When religion is put on as a cloak it is apt to be rather diaphanous.

It is all right to let bygones be bygones, but sometimes, in spite of everything, they will stick to you like burs on a sheep, especially if they happen to be of the unseemly sort of your own making.

Courage is a great thing, but when it nerves a man to stand for his own folly it ceases to be a virtue.

Always having lived on the farm, I know not what it is to work under a boss, but I imagine it would not set well with me. Here on my farm my time is my own, and I am my own boss. Isn't it worth a great deal?

He who keeps his eyes open for something to do never looks long in vain.

Experience has convinced me that the six-inch flooring will last longer in the bottom of a wagon box than the four inch, but few lumber yards now keep a good grade of six-inch flooring.

When anything bothers them lots of men would rather swear at it than to mend it, and some of them do both, which is too great an expenditure of energy.

The occupation of just loafing around isn't anything like as enjoyable as many folks who have to work pretty hard are inclined to think it is.

There are many ways of losing money rapidly, but a sure, quick way is to buy a new top buggy and let it set out in the shade of an old apple tree. A fifty-dollar bill is soon dropped from its value.

An itching ear lends zest to the tongue of gossip.

We cannot help growing old, but, bless your heart, my dear, nobody is forced to grow sour.

The tongueless machine gives greater freedom for the teams, but often the machine does not "track" as well. The hillside farmer, particularly, finds the tongueless feature not to his liking, as the wheels must be chained to act as a brake when going down hill, if the machine is not in operation. Somehow, I cannot get used to the riding plow that is without a tongue.

The frequent use of the pronoun "I" indicates a lack of ideas.

You cannot cool anger by the use of hot words.

When the thinker and the tongue are disconnected the latter seems to be tireless.

Paint doesn't make the machine work any better, but we have got so used to a fine finish of paint and varnish on our farm machinery that I doubt if the manufacturer who would roughly paint his product could make many sales, however good the material used might be and however mechanically perfect its construction.

The folks who do the least to build up the neighborhood can always tell the most about its faults.

A family of woodpeckers may be a boon to an orchard, where borers are a pest, but they do no good to the siding of a building when they commence operations there. I have shot a few and shot at a good many in an effort to keep them from doing damage.

Old Bill Williams says that the cost of living seems to be a good deal higher than it used to be, but that he cannot see that it is worth any more.

The tango and the turkey trot are not in the published curriculum of any of the colleges so far as we have observed, but it is to be noticed that they are among the accomplishments of some of the students who came home for the holidays.

Who abuses his credit mistreats about the best friend he can have in this unfriendly world.

Every day cannot be a fine day, at this season of the year, so some of the sale makers strike it unlucky and must take a postponed date, for there is a sale for nearly every day in the week, except Saturday. It is the time of harvest for auctioneers.

A man may have the notion that woman's mind is shallow, but let him undertake to fathom it and he soon gets entirely beyond his depth.

The man who entirely sheds his boyhood upon reaching his maturity is not cut out to be a very successful parent, and as a teacher, he is sure to be a failure.

Boy thoughts turn to traps and guns now. Small boys are setting traps in every likely place and the larger boys hunt with guns at every opportunity. I can remember when my only expense bill was for ammunition. Of course, my parents looked after my clothes and board, but my only thought was of ammunition, and it was for this that my spending money went.

The church member who fails to attend meeting because the sermons are rather poor forgets the real purpose of the church services.

Hurry is a great destroyer of efficiency, and yet some men act as though it were the only way to bring things to pass.

Freezing weather makes work. For one thing, water must be emptied from everything where its freezing would damage. Sometimes a pump freezes becauses the vent has not been opened; perhaps water is left in the cooling jacket of the gasoline engine or in the radiator of the auto, and there are other ways in which water freezing can do a great lot of damage in a very short time. One must have his thoughts about him when freezing weather comes.

The man who seeks a country or climate that will make him contented is doomed to disappointment. Contentment is a soul grace, a spiritual acquisition, and no sort of environment can possibly produce it.

Where the field has been cleaned of its fodder, perhaps to fill a silo, the ground is being plowed as weather permits. I have seen much plowing being done where there is corn stubble, and in every instance, stubble has prevented good work. Each corn row is shown on the plowing by the stiff stubs. Has any reader devised a stub cutter that cuts the stub at the ground line? If so, I would like an explanation of how it is made.

What is the use of going around half dead all the time? Why not hurry up the funeral and be done with it?

There may be a better country than the one in which you are now located. But you are not very apt to find it through the florid representations of the exploiters of real estate schemes. It takes hard work, foresight, frugality, and some other solid virtues to produce success anywhere in the world. No doubt the exercise of these virtues right where you are would richly repay.

CURRENT EVENTS

NO SPECIAL convention of the republican party to correct the misrepresentation of the South and give due and proper recognition to the primary laws of the various states will be held, notwithstanding the valiant efforts of Senator Cummins, of Iowa, and other progressive republican leaders. At last week's conference of the national committee, in Washington, it was decided to make a change in the basis of representation in national conventions which will greatly affect southern states, give full recognition to the principle of the primary laws regarding such elections adopted by several states which provide that all delegates be selected at large and accept the principle that delegates properly accredited by state authorities shall be placed on the temporary convention roll. The convention plan was turned down by a decisive vote. The committee's action means that the party will not go so far as had been hoped in purifying itself of existing abuses, and yet, at the same time, will make a start which the progressive element hopes will be continued until the people have a more direct and decisive vote in party deliberations. Delegates elected at regular state primaries will be seated hereafter and not unseated in favor of caucus delegates as was done in Chicago in 1912. At the same time only a half loaf of reform is granted, though this is much better than the stone that might have answered the people's entreaties.

INDICATIONS are that the currency bill will pass the senate and be ready for the president's signature before these words are read. A test vote taken during the past week on an effort of Senator Hitchcock, of Nebraska (who has bolted the party caucus), to amend the bill, was decidedly in favor of the administration. The republican assaults upon the bill continued to the last. During the past week Senator Cummins, of Iowa, progressive republican, criticised certain features of the bill in an able speech. He sharply assailed the principle of bank ownership of the regional reserve banking system and bank control of it as found in the Owen bill, which is the democratic caucus bill. He took the position the country would not stand for this when it understood the facts and he advocated public ownership and complete public control. He held that the vast power of determining the distribution and use of the reserves "should be given to a body of men who have no ends to serve but the general good."

THE basis of representation in future republican national conventions (should the national primary bill fail to pass and future nominating conventions be held by any of the parties) is shown in the following resolution unanimously adopted by the national committee at its meeting in Washington last week: "Be it resolved, that this committee shall issue a call for the national convention to be held in 1916, to nominate candidates for president and vice-president in accordance with the following basis of representation: Each state shall be entitled in such convention to four delegates at large; one delegate for each representative in congress at large from any state: one delegate from each congressional district; an additional delegate from each congressional district in which the vote either for republican presidential electors in 1908 or for the republican candidate for congress in 1914 shall not have been less than 7,500 and that for each delegate chosen an alternate delegate shall be chosen in the same manner and at the same time, to act in absence of the delegate." This new rule will not be put into effect, however, unless prior to January 1, 1915, republican state conventions in such a number of states "as are entitled to cast a majority of votes in the present electoral college shall ratify the action." The matter is thus left undetermined for the present, the individual states to have the final say between now and a year from January 1st.

GOVERNMENT ownership of telegraph and telephone lines, the same as the postal service, is recommended by Postmaster-General Burleson in his first annual report. He says: "A study of the constitutional purposes of the postal establishment leads to the conviction that the postoffice department should have control over all means of the communication of intelligence. The first telegraph line in this country was maintained and operated as a part of the postal service, and it is to be regretted that congress saw fit to relinquish this facility to private enterprise. The monopolistic nature of the telegraph business makes it of vital importance to the people that it be conducted by unselfish interests, and this can be accomplished only through government ownership." It will be recalled that Postmaster-General Hitchcock made a similar recommendation, thus bringing himself under the displeasure of President Taft, who was not favorable to the movement. President Wilson has not made his opinion public on this matter, but the movement is gaining headway, as is evident from the fact that the last two postmaster-generals, one a republican and the other a democrat, recommended it.

AN INTERESTING political campaign is being waged in Alabama, where Richmond Pearson Hobson, the hero of the Merrimac during the Spanish-America war, and Oscar Underwood, chairman of the ways and means committee in the house, are contesting for the United States senatorship. Mr. Underwood is, without question, the more able of the two men and with his long and honorable career in the house is well qualified to sit in the senate. He is looked upon as a conservative, however, and is known to be opposed to the principles of strict prohibition, which Mr. Hobson is championing. In fact, Mr. Underwood has been quoted in the newspapers as saying: "If prohibition continues to be injected into democratic policies, either prohibition will be ground to dust or the democratic party must die." Mr. Hobson made a spirited reply to this in the lower house of congress recently, arousing the galleries to great enthusiasm, defending prohibition with all his might and main. He charged that Mr. Underwood was the candidate of the liquor interests, bringing forth a fiery denial from his opponent. The South has experienced a number of strenuous political campaigns of recent years, with such men as Tillman, of South Carolina, and Vardaman, of Mississippi, as candidates, but it has been a long time since it has had a campaign more full of personal issues or more strenuous than the one now in progress in Alabama between Hobson and Underwood, both of them nationally famous.

THAT the R. F. D. carrier should be utilized to distribute mail in the small towns and villages from which his rural route emanates and that he should be paid by the hour, on the basis of an eight-hour day, are some of the recommendations made by Postmaster-General Burleson in his annual report. He says: "As rural routes emanate from practically all of the places where this village delivery service would be desired, the carriers should be used to make such deliveries as may be desirable and feasible to the residents of the villages. The compensation of rural carriers, however, at this time, is based on the length of their routes and to make them available for the service indicated their salaries should be based upon an eight-hour day. With this change these carriers could be used not only to supplement the general delivery service as indicated, but in many instances in the delivery of parcel post matter as well, thus obviating the necessity for additional horse hire for the delivery of the larger packages. The compensation of rural carriers should therefore be changed from a mileage to an eight-hour basis, and these carriers should be permitted to deliver mail regardless of distance from the postoffice or the corporate limits of the city or town." This matter will, undoubtedly, come up for serious consideration in the department during the coming year.

THE COW AND THE HOME.

"Where there is a cow there is a home," is a quotation worthy of being adopted as a slogan by every one who believes in the American farm home. The cow has paid the household expenses of thousands of homes for many years. The keeper of a store in a new settlement was but voicing what is true everywhere when he said, "Our farmers who keep cows always have money to pay their bills, what is more they no doubt have a better living and get more out of life than do those who try to live from the sale of hay and grain."

Naturally the kind of cows that are kept determines largely the kind of home the owner has. There are good cows and inferior ones. There are good homes and homes that are not particularly comfortable or inviting. Cows that make a profit for the owner certainly provide him with a better home and a better life. Usually the man who loves good cattle will love his home and family correspondingly more and will desire good things for his home. Good cows will pay the expenses of the boys and girls at school. Good cows hold the interest of the boy on the farm and in the farm home. The cows may well be considered one of the home producers of the nation.

Dr. S. J. Crumbine, secretary of the Kansas State Board of Health, asked the board to provide for a rural sanitary survey in Kansas. Recently the Indiana Board of Health made a survey of five counties and found some conditions of the farm homes that were as bad or worse than any to be found in the cities of that state. Doctor Crumbine desires to make the survey to see exactly what the average farm home is like. He purposes to pick some central Kansas counties that are typical of Kansas farm communities, where good, bad and indifferent homes may be found.

AMERICANAX GLASSPORT, PA.

WHETHER on a Lippincott, or Hunt or Blood or Red Warrior or Rob't Mann—that brand stamped in the steel assures you the keenest, sweetest, deepest-cutting blade ever designed.

Do Thin Blades Break?

DO THEY? In the hands of a clumsy, awkward man, one may break, but ninety-nine others DO NOT BREAK; and think of depriving the ninety-nine of a keen, deep-cutting axe to keep the one clumsy man from breaking his axe.

NO SIR! We make axes for men who appreciate deep-cutting axes. We don't believe anybody wants to chop with an axe shaped like a cold chisel.

Notice your axe. See who made it. If it's thin it is stamped with the name of the maker. If it is thick it has no name except a paper label that soon weare off.

Get the World Conquerers, the Tournament Winners, the genuine deep-cutting axes—the HUNT, BLOOD, LIPPINCOTT, RED WARRIOR or ROB'T MANN. Look in the steel and you will find the brand

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

DAMAGE FROM RENTER.

A Subscriber, Lynn Grove, Iowa.—I own a farm in Oklahoma with about twenty-five acres of alfalfa on it. I leased the farm for one-half of the hay it would produce. The renter took in thirty-five or forty horses to pasture on the alfalfa last winter, and his lease expires the first of next January. Can I recover from him half of the pasture money he received?

Answer.—The effect of pasturing the alfalfa land was to diminish the hay it produced and therefore you can recover damages for the injury done to the hay crop and also damage to the land if any was done.

DIVORCE AND ALIMONY.

A Subscriber, Clarks, Neb.—I have fallen heir to eighty acres of land in Nebraska. A deed is on record here in the court house, conveying the land to me during my lifetime, and then to my children. There is a deed and a will in the old country, which cannot be had till after my death. In case my wife sues me for a divorce, can she lawfully claim any of my property?

Answer.—If your wife sues for a divorce she will probably ask for alimony and if the court grants the divorce, the judge has power to award your wife alimony, and order you to pay her a certain amount every month, which you will be required to do. How much this would be cannot be told beforehar . It depends upon what the judge would consider just and equitable.

IOWA NEW ROAD LAW.

Mr. Floyd Brinton, Stuart, Iowa.—Can you give me any information about the new road law of Iowa, or advise me where I can get such information?

Answer.—You omit to state what particular information you wish about the new road law. It is quite lengthy, and covers a number of points. You can find it in the session laws of Iowa, 1913, pages 109 to 134, also 181 to 187, also 319 to 324. The book can be found in any lawyer's office and most justices of the peace have it.

LIABILITY ON NOTES AND MORTGAGES.

A Subscriber, Sidney, Iowa.—A and B were husband and wife, A owned about 100 acres of land, and B owned forty acres. They owed a joint note for $4,000 secured by a mortgage on all their lands. A died recently, and the note and mortgage will soon be due. (1) Will A's children have to sell enough of A's land to pay all the debt, or will B have to pay part of it? (2) A's children are all of age. If they wish to renew the loan by note and mortgage, would their husbands and wives have to sign the note and mortgage? (3) In case said husbands and wives would sign a note and mortgage, would they be liable in case the mortgaged land should decrease in value and not bring enough on foreclosure sale to pay the debt?

Answer.—(1) If the debt represented by the note and mortgages was in fact A's debt, the wife merely being surety and mortgaging her land as security, then the debt should be wholly paid from A's property, although the holder of the note and mortgages may proceed against all of the mortgaged property, but if it was the debt of both husband and wife, then each should pay a just proportion thereof. The matter ought to be settled amicably between the parties. (2) In case of renewal, the husbands and wives should sign the papers. (3) They would be liable, unless the contrary was expressly stated in the notes and mortgages.

PASTURER'S LIEN.

An Iowa Subscriber.—Does the law of Iowa give a lien on cattle and horses to a landowner for the pasture bill of such stock, or can the owner of the stock avoid the same on a plea of exemption or mortgage?

Answer.—The law provides that "livery and feed stable keepers, herders, feeders and keepers of stock for hire, shall have a lien on all stock property coming into their hands as such, for their charges and expenses of keeping, when received from the owner or any other person, subject to all prior liens of record." If charges are not paid the lien holder may sell the stock at public auction, after giving the owner ten days' notice in writing of time and place of sale and posting three notices of sale in three public places in the township, and out of the proceeds of sale pay his charges and expenses. As will be observed, the words "subject to all prior liens of record" would make a mortgage of the stock recorded prior to lien of the pasturer take precedence thereof, but a claim of exemption would not take precedence of the pasturer's lien.

VALIDITY OF DEED AND WILL.

A Subscriber, La Harpe, Ill.—A is the father of eight children, B, who is the youngest, had the care of his parents during their entire lives. A made a will giving his real estate and personal property to B. As the parents grew old, C, an older son, bought a threshing machine for $1,600, giving three notes for three annual payments of $533.33 each and A signed the last note as surety. C failed to pay the first two notes, and A deeded seventy acres of land to B, the deed consideration being stated at $3,500 and B gave his father a lease thereon for life. A put his will in an attorney's hands for safe keeping and it is still there. A died four years ago and his wife died two years ago. B paid the note that A signed as surety, after he got his deed to the seventy acres. Three of the heirs have brought a suit to set aside the deed on the ground that A made it to avoid paying a certain note. (1) Can A's will be probated? (2) Can the three heirs set aside A's deed to B? (3) Will it be necessary to have the will for proof?

Answer.—(1) A's will can be probated. (2) The deed of A to his own son for the seventy acres of land, can only be set aside by satisfactory proof that it was fraudulently made. (3) In a trial of the matter in court, the will will be important evidence.

VERBAL CONTRACT TO SELL LAND, NOT BINDING.

An Iowa Subcriber.—A asked B if he wanted to buy a certain lot of land and B said he wanted it, and A said, "All right, we will make out the papers, etc., later." Months have passed since said conversation, and nothing has been done. Can A recover interest on the value of the ground before the papers are made out, and the lot is cleared of implements belonging to A?

Answer.—There was no valid or binding contract made between the parties about the sale of the lot. Neither party can enforce the alleged sale of the lot, because the law requires all contracts for the sale of real estate to be made in writing and signed by the parties. A cannot therefore recover interest. He cannot compel B to buy the land, and B cannot compel A to sell it.

DEBTS OF DECEASED HUSBAND.

A Subscriber, Clarks, Neb.—A and B were husband and wife. A died two years ago leaving B and two children without any means of support. B earns a living for herself and children by sewing and washing. In case B should remarry or inherit any property, would she or her next husband be liable for A's debts?

Answer.—Neither B nor her next husband would be liable for A's debts.

LOSS OF MARE IN FOALING—DAMAGES.

A Subscriber, Baxter, Iowa.—In March, 1913, I bought an imported three-year-old Percheron mare. The certificate of her pedigree had a tag attached stating that the mare was bred on June 17, 1912, and due to foal on May 17, 1913. She did not foal till July 21, 1913. When she passed May 17th without foaling, I did not know when to expect it, so she foaled without attention and ruptured herself, and inflammation set in, and she was in such a condition of pain and misery, that I had to shoot her. If her foaling time had been known beforehand, she could have been saved by prompt attention. As it seems impossible that the mare could have been bred on June 17, 1912, what chances have I to recover damages from the party who sold the mare to me?

Answer.—Your chances to recover damages are not very favorable. The precise time when a mare will foal can never be exactly known beforehand. They are liable to run over or under the usual period, but not as much as in your case. However, you must have known that the mare was near the foaling time, and you were therefore somewhat negligent in not keeping a careful watch of her condition.

PROPOSE A MARKET COMMISSION.

In an address delivered before the Twilight Club of Fond du Lac, Wisconsin, on "The High Cost of Living, Its Cause and Cure," Governor McGovern discounted the theories that have been commonly advanced as the cause, such as tariff, increased production of gold and extravagance, and went back to the low supply and demand. "The fact of the matter," said the governor, "is that while our population has been increasing our production has been decreasing; while we have more consumers we have fewer producers of food products and fewer food products. Scores upon scores of agricultural counties show an actual loss of population, while our city of Kenosha shows an increase of 100 per cent. The problem of how to control this vicious tendency of the population cityward and restore the equilibrium between city and country is one of the really big problems of today.

"But what is the cause of the tendency cityward? Simply better opportunities for the young men and women. What is the remedy? Make the farm more attractive. And how can this be done? You find the answer in the words of Sir Horace Plunkett, better farming, better business, better living.

"Wisconsin has done much to promote better farming, but what is the use for a farmer to raise a large crop when he can get more money for a small crop?

"How shall we deal with the problem, how did we deal with the railroads and the filled cheese problem? By passing a few general laws and then placing their administration in the hands of a commission. The railway commission, the dairy and food commission have rendered Wisconsin valuable service and point the way for a market commission which shall enable the farmer to buy better and sell better."

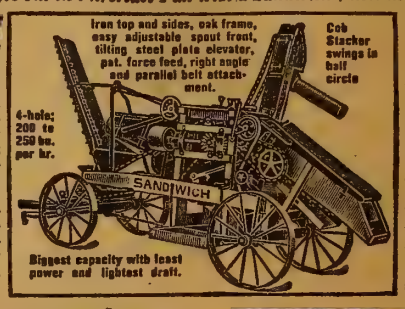
SANDWICH Iron sides CORN SHELLERS

Turn Idle Power Into Gold!

Every winter—when your team or engine is idle—you can clean up $600 to $1000 shelling corn for farmers all around you. Lots of hustlers with Sandwich Shellers make more than that. Figure your nice fat fortune in five or six years. Yet the Sandwich will mint you money for a life-time! *William Arnold, Red Oak, Ia., shelled 1400 bu. in 7 hrs. last Fall with a Sandwich 4-hole in constant use since 1868!*

Beware of "Copies"

The world's first Power Corn Sheller was born in our factory before the civil war. Now most makers copy it—as far as the law allows. Others try to substitute. But all have failed. For imitation means limitation. Without Sandwich inventions they can't equal Sandwich performance.



Your Own Terms

We cut out the jobbers' profits by selling direct to you through our own organization of branches and agencies everywhere. You get the terms you want besides. And you pay us from your first year's profits—the easiest way to get in the shelling business.

First call—Top pay

You will get them both from Farmers who hire their crop shelled. They've learned from boyhood that the Sandwich *no-choke screens* turn the corn out clean as a whistle—soft, sound or frosted. Then the corn grades highest. So Sandwich sales lead other shellers 300%.

FREE Sheller Book

Wherever you live, however much or little corn to shell, this Free Book shows a Sandwich Sheller to meet your special needs. It gives you the heart-to-heart facts on sheller construction and operation. A postal brings it postpaid. It's your first step. Write today.

WASTE LAND MADE PRODUCTIVE

How Thousands of Grain-Belt Farmers Are Restoring "Robber Land" to Cultivation Through the Medium of the Modern Stump Puller and Adding to Their Income Thereby.

IN THIS progressive day when farming has reached a higher plane than ever before, when the conservation of the natural elements of fertility and intensive farming on the most scientific scale are being preached on every hand, the successful farmer is he who reduces his waste land to the absolute minimum and who makes every acre yield to its utmost. The epic story of agricultural success in America would never have been written had it not been that the farmer, realizing the great waste from unused land, devoted himself to restoring to cultivation those tracts which were standing idle. To bring this about immense areas of swamp lands have been drained, other immense areas of arid land have been irrigated, still other tracts, known as cut-over lands, have been ridded of stumps which kept them from the plow. But the story does not stop with this. Small as are the fields and tracts kept from cultivation by a few stumps or by a mile or so of hedge, when taken individually, they aggregate an immense total. It is to the everlasting credit of the American farmer that he is seeing his opportunity and restoring this stump and hedge waste land to cultivation through the medium of the up-to-date stump puller

"Robber land" is the name applied to such waste land by the department of agriculture and the term is appropriate. Such land robs the farmer of an income which is justly his. Such obstructions rob the soil of those elements of fertility which would otherwise and far better go into the growing of crops. Such wastefulness robs the nation as a whole of a still greater per capita of wealth. "Robber land" it is, indeed, so long as a single stump remains to keep ever so small or ever so large a tract out of cultivation or a single stretch of hedge remains with its five to fifteen wasted rows of corn land on each side.

The problem is how to rid the land of these "high-priced boarders who never pay their board." It is more easy of solution than many farmers are prone to think.

On a previous occasion we called attention to the fact that the modern, up-to-date stump puller—made of steel, so as to obviate breakage, and requiring but one anchor stump, so as to avoid waste of time and make it practicable in every instance—was solving the problem and restoring many thousands of acres of "robber land" and waste hedge land to cultivation. Since that time, we are delighted to learn the good work has been progressing at a rapid rate. Not only are small areas being restored to cultivation, but so are immense tracts all too long withheld from the plowshare.

We have had the privilege recently of reading a number of letters from actual, practical farmers, not only in the grain belt, but throughout the country generally, who verify our claims for the modern stump puller. In many instances, father and son are doing the work without additional help, while in other cases farmers are paying for their puller and adding a tidy income by pulling stumps for their neighbors. There are instances of farmers getting together and buying a puller in common, so as to reduce the expense, and doing the work together, so as to make hired help unnecessary. Some of these letters are so intensely earnest and so thoroughly practical we take the liberty of printing a few herewith.

This from a Minnesota farmer: "Don't let willows have possession of your valuable land. Willows don't pay taxes; besides, willow land is among the richest soil a man has on his farm. I had several acres of land covered with willows 'as thick as hair on a goat's back.' I wanted it cleared and I could get it cleared for $35 an acre. Last spring I ordered a stump puller and that very same land was grubbed in a very short time by my hired man and a ten-year-old boy, with one horse."

This from an Iowa farmer: "If I had only known how easy it was to get stumps out I would have had a puller a long time ago. With my steel puller, two men and a boy, I honestly believe I could pull as much in ten hours as the common pullers would pull in a week. I expect to clear enough on every three acres next year to pay for my machine."

This from a Wisconsin farmer: "I have done very well with my machine. I have pulled over 1,500 stumps on my farm and now have a nice stand of alfalfa on the land in place of the stumps. After clearing my own land I pulled stumps for neighbors and earned $241 with it. I have made all the way from $7 to $10 a day with it."

And this from an Oregon farmer, out in the region of big trees: "It is given up here that I have the best puller in this country. It pulls stumps that are seven or eight feet across, four feet from the ground. I burst the very large ones. Last Saturday a neighbor came down to see me. I was hitching onto a seven-foot stump. He says, 'You ain't goin' to try to pull that.' I says, 'No, I ain't goin' to try, I'm goin' to pull it.' When we started and the stump rolled out he says, 'Why, that's no pull at all; I want you to come over to my place and pull a lot for me.' "

Such letters as these, written by farmers who have been face to face with the problem of waste land around stumps and along hedges, form an interesting chapter in the restoration to cultivation of waste and robber land. It is a story which we are glad to be able to present and which we illustrate with actual photographs furnished us by the Hercules Manufacturing Company, of Centerville, Iowa. With fertile grain-belt land producing fifty, sixty and even eighty and ninety bushels of corn to the acre, with bumper crops of wheat produced this year and better prices prevailing for all kinds of farm crops than have been known for many years, it behooves every farmer to see to it that every inch of his land is made productive and profitable. He cannot make a better start than to tear out the hedge which was all right when land was worth only $10 or $25 an acre, but which is an income-robber now, and tear out the stumps which prevent cultivation to all too large an area. He will then be practicing conservation in a practical way and adding not only to his own income, but to the wealth of the entire country: the granary of the whole wide world. He will put the world in debt to him.

HERE'S A "LUNKER" THAT IS GIVING WAY TO A SUPERIOR FORCE—A HERCULES.

Some Figures on the Importation of Corn

SOME more or less imaginative historians have regarded the civil war as having been fought to determine whether cotton or corn was king, says the St. Louis Globe-Democrat. Surely even a dozen years ago the man who should have prophesied that in 1913 the United States would be importing corn for the feeding of Americans would have been regarded as a dreamer, says the Brooklyn Eagle.

Yet a French steamship came into port recently with a cargo of 192,000 bushels of corn from the Argentine, and the news is that a number of other vessels are under charter to bring corn and other grains from Buenos Ayres. For some years in the past decade the total import of corn and corn meal has not totaled 3,000 bushels. The largest import in any one year was in 1909, when 228,276 bushels came in. Here is a single ship bringing from a single port on one trip about 90 per cent of that record-breaking importation during the whole of the year of 1909. The production of corn in the United States has always been in excess of the consumption, according to the records, about 3,000,000,000 bushels being demanded for the American market. For the first time, under the new tariff, we are actually drawing on the world's supply. That is an epoch-making fact. Its significance cannot be misunderstood. We are becoming more and more a manufacturing nation. It has not paid to raise corn in the East for many years. It is ceasing to be profitable to raise it in many sections of the West. Vegetables, fruits, eggs, milk and cream to feed factory employes are more remunerative. And it is the policy of the government to leave the channels of trade free so that our manifest destiny may develop normally. Big corn imports are only one incident of that general policy which after exporting lands have had a chance to raise new crops, must materially reduce the cost of bread stuffs for our mechanical workers all over the country.

BRISTOL, PENNA.

ALFALFA ALFALFA

PURE, Dakota grown, Preparator treated seed for sale. Guaranteed to grow successfully in every state in the Union. The Imported Preparator will increase germination over 100% and will produce healthy, strong, vigorous plants that will stand any climatic conditions. A western agricultural college reports as follows, on Preparator treated seed: Six oz. seed, not treated, planted May 25, 1913, yielded 4,967 plants. Six oz. seed, treated twice with Imported Preparator, planted same day in same field, yielded 12,549 plants. The above difference shows a gain of 153-6%. Buy seed you know was raised in a northern climate, from a man who has raised alfalfa, successfully, for several years, and who will guarantee its purity and germinating qualities. Be careful where you buy your seed. Do not buy your seed raised in a southern climate where seed can be bought from $7 to $8 per bushel—it will never grow successfully in your locality, and your time, labor and money will be wasted. Beware of anyone offering you seed from $7 to $8 per bushel. Reliable seed men are scouring the country for northern seed and are paying more than $8 per bu. in carload lots. I will guarantee that $10 worth of my Preparator treated seed will produce more strong, healthy vigorous plants than $12 worth of any untreated seed on the market today. For particulars, prices, etc., write J. A. Stransky, Box 84, Pukwana, S. D.

Court Brand Is Clean Seed Don't take chances! Buy our "COURT Brand," the cleanest, purest, hardiest genuine Alfalfa seed. Meets every requirement of all U. S. and Canadian Pure Seed Laws. Purity over 99.50 percent.

ALFALFA

We are wholesalers and want you to know the merits of "Court Brand" Alfalfa Seed. If your dealer can't supply you, order direct from us. Only $8.00 per bushel, f. o. b. Milwaukee.

COURTEEN SEED CO.
Station D Milwaukee, Wis.

TRADE COURT MARK BRAND FINEST QUALITY

SWEET CLOVER

BIGGEST MONEY-MAKER KNOWN—INVESTIGATE

The greatest forage plant that grows. Superior to all as a fertilizer. Equal to Alfalfa for hay. Excels for pasture. Builds up worn-out soil quickly and produces immense crops, worth from $50 to $125 per acre. Easy to get started, grows everywhere, on all kinds of soil. Don't delay writing for our Big 76-page free catalog and circular giving full particulars. We can save you money on best tested guaranteed seed. Sample Free. Write today.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

EARLY TOMATOES.

A South Dakota (J. E. C.) gardener writes to ask whether tomato plants grown inside, started early, will ripen fruit any earlier than seed sown in the garden. His experience seems to indicate that there is not much difference in time of ripening.

This writer's experience certainly warrants the claim that by starting plants in the house, or hotbed fruit may be secured two weeks before garden plants produce.

But the point to notice is this: Hotbed plants must not be transplanted to the open garden until warm weather comes. Many inexperienced gardens make the mistake of getting them out too early because the plants are large. If they are set out while the weather is chilly they will be stunted so that it takes them weeks to recover. And in that case it might happen that seed sown in the garden at the earliest time of real tomato weather will give as early fruit as the checked plants.

We have learned, by some costly lessons, to hold the plants in hotbed until the chilly season is over. No matter if it runs late into May, and if the plants come into bloom before you can transplant them. There are several methods of holding plants in good condition so that they may be transplanted without injury. When they are grown thickly in the seed bed, every gardener knows, of course, that they have to be transplanted when they have the fourth leaf. My plan is to set them about two inches apart each way. In that way they will grow stocky, and strong. Remember to lift the sash in warm days to harden them.

Then when they get to be four to six inches tall transplant into tin cans. Take quart cans, and cut out a square piece in the bottom, the top having been all removed, to leave a smooth edge. Take a piece of lath two inches long and put over this opening in the bottom; fill with rich earth and set one plant in each can. Pack these cans so filled as closely as possible in your hotbed. Give plenty of water, and harden by removing glass as long as necessary. No matter if they get to be a foot tall, bloom, and set fruit. When you come to transplant, press upon the piece of lath in bottom of can, and the whole lump of earth will come out without disturbing the roots.

All this is some work, but it will accomplish the end. You will get early fruit instead of using cans; many gardeners use flats for transplanting. The flat is a shallow box about one foot by two. It should be deep enough to hold about three inches of earth. Set the plants in this about four inches apart. Then when transplanting to garden the roots will be found to nearly fill the whole space and by cutting evenly with a trowel the plants may be moved with very little disturbance.

It is a common thing for some of the earliest specimens to be lost by rotting. Weather conditions have something to do with this trouble. As a rule, it is not a heavy loss, and, while it is possible to control and prevent by spraying with a solution which will destroy the germs, the game is not worth the candle. In other words, the cost of the spraying will be more than the saving on the fruit.

But you can surely get early tomatoes by starting plants in February and handling them in a proper way. However, there will be no gain, no success by starting seed in a window box, and never transplanting to make them stocky and strong. They will, in that way, grow up weak and spindling and valueless.

PLANTING EVERGREEN SEEDS.

A Kansas reader of this paper writes to ask how to plant seeds of the conifers and make them grow.

This work is easily done, but it requires care and attention to detail. They cannot be handled successfully as easily as the seeds of the deciduous trees. With the ash and box elder and maple, all you need is to pick the seed and plant it in the garden and germination is as sure as with peas or beans.

With evergreens you should pick the cones just before they ripen enough to scatter the seed; spread them out upon a paper in a dry room; near a sunny window is the best place. In a few days of sunny weather they will open, and then the seeds may be shaken out.

Having the seed in hand take a shallow box and put in it a layer of damp sand, a half inch thick. Upon this sand scatter the seed. Then spread over this another half inch of sand. Then put it out of doors to remain during the winter. The freezing is an important preparation for germination. Put it in a secure place, where no chickens can reach it and no mice or squirrels, for they are very fond of the seeds to add to their daily rations. Birds also will eat it greedily if they can get at it. In planting, which should be deferred until settled warm weather, the last of April, or even May, be careful in all your operations. The seed must have been kept moist until ready to plant.

Prepare the bed by mixing a quantity of sand with the top soil. The first three inches of the soil bed should be half, or at least one-third, sand. Mix it thoroughly. When the surface is well pulverized and leveled sow the seed either in drills or broadcast, but in either case be careful not to sow too thickly. The crowding of the plants will develop a weakness which will cause the death of many of them. Cover the seed lightly—a quarter inch of sand sifted over will be about right for seeds of the spruces. Pines having larger seed may be covered a little deeper. After planting sprinkle well so as to wet thoroughly. Now have prepared a lath screen, large enough to cover the entire bed. The spaces between the lath should not be over a half inch wide. So rest this screen upon posts at the corners that it will be raised six inches above the surface. The way in which you place this screen is important; let the lath run north and south. Then the sunlight which strikes the seed bed will be continually shifting as the sun moves along and no spot will get the heat for very long.

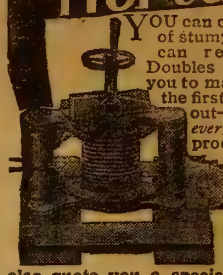
Now it is a part of your work to maintain a proper degree of moisture, and if natural showers fail you must supplement with your sprinkling pot. Always water in the evening and saturate the bed. A little sprinkle which just dampens the surface is worse than nothing. If you do a good job, once or twice a week is enough if you have a good screen, and if the weather is seasonable. But be sure that you do not let the seed dry out; to dry out spells failure. Remember the natural condition in the forests, for there the seedlings come in perpetual shade. Any mountain climber notices how the trees prevail upon the northern slopes, while the south slopes are nearly bare; and this fact is explained by the shade and moisture upon the north, and their absence upon the south side.

After a month the seedlings should begin to show in your well-tended bed. They will be small and delicate looking at first. Though destined to be forest trees, at the start, they are anything but robust. Keep the soil stirred loose, but be careful about disturbing the seedlings. The first season's growth will not be over two inches. In the fall mulch with fine chopped straw so that the little trees will be covered, but not bent over. The second year still keep the screens over, but do not remove mulching.

The engraving shown is that of a beautiful Short-horn heifer and a judging class at the farmers' institute at Farnam, Neb. This heifer was given as a prize to the best judge. She was donated by Mr. Crossgrove, of that place. He is shown holding her. Mr. Crossgrove sells Short-horns at auction on March 11th.

CLOVER Our "PURITY BRANDS" of Red Clover, Timothy, Alfalfa, Alsyke and other farm seeds average nearly 100% pure. All guaranteed to pass severest tests of your State Agricultural College. We have the best cleaning plant in Iowa and for more than 20 years our seeds have been the standard of purity. Buy our hardy northern seeds. **The Adams Seed Co., Box 61, Decorah, Ia.**

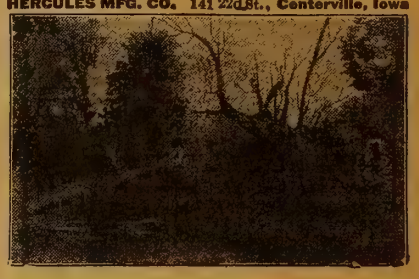
Pull 100 Stumps A Day—With The Hercules



YOU can clear an acre or more of stumps a day. No stumps can resist the Hercules. Doubles land value—enables you to make $1200.00 on 40 acres the first year after stumps are out—and $750.00 in crops *every* year after. Get the proof. Why not

Write Us Now

Book tells all the facts—shows many photos and letters from owners—tells all about the many Hercules features. We'll also quote you a special money-saving price proposition that *will interest you.* Address
HERCULES MFG. CO. 141 22d St., Centerville, Iowa



There is one factor that statisticians do not keep in mind when they estimate the value of farm crops. Reference is made here to that part of the grain that is used for maintaining the work horses and all the breeding stock. To say that a state raises 300,000,000 bushels of corn and that it is worth 50 cents a bushel does not lead to the conclusion that the farmer is going to realize $150,000,000, and yet that inference is always carried with such a statement.

"Where did pop corn learn to pop?" asks the Minneapolis News. You say it never learned and that it always could pop? Well, then, how did it find out that it could pop? Nobody would ever imagine from looking ot stubby, prickly ear of pop corn, compact and orderly, that it could contain the riotous spirit of a popper full of popping corn. The wonder is that the pop corn suspected itself of any such potential jollity. A litle warmth, a little judicious fondling and it pops—it bursts out of itself into a dancing, leaping thing, light as a laugh and gay as fun, white and beautiful and good to eat.

Manufacturing Hog Cholera Serum.

Science Reduced to Terms of Common Understanding as Applied to the Saving of Our Hog Population.

By W. H. Williamson.

THE manufacture of hog-cholera serum and virus is, to the layman, more or less of a mystery. To those who have a daily opportunity to visit a serum plant the process seems very interesting and comparatively simple. The most evident features of the process are the absolute economy of animal life and by-products and the absolute sanitation that mark each step of the several necessary operations.

The swine used in a serum plant may be roughly divided into three classes. 1st, animals having hog cholera in a virulent form; 2d, hyperimmune animals from whose blood stream the serum is obtained; 3d, test hogs which are used in determining the efficiency of the serum.

Hogs affected with hog cholera in a virulent form are either purchased, or are produced by injecting virulent blood into the veins of a healthy animal. These hogs are ultimately killed and bled in the following manner: The hog is first suspended by its hind legs with its head hanging downward. The back of the animal rests in a trough-like support erected parallel to the wall of the killing room. Its head is made fast by means of a running noose slipped over its under jaw and made fast to the back of the supporting frame. In much the same manner the fore legs are secured so as to prevent their interference with the operation of bleeding.

The animal is next carefully washed and the under side of its neck is carefully shaved. The point of entran of the killing knife is also carefully disinfected. All knives and utensils of every kind which are to be used in the bleeding operation are carefully sterilized or treated with some strongly anti-septic solution. The hog is now considered ready for killing.

The blood or virus, as it is now called, is collected in a sterilized glass container. Great care is taken to prevent outside contamination from entering in the form of dirt, dust, or foreign organism of any kind. If such contamination occurs the virus is said to contain mixed cultures of various organisms and is unfit for use in the production of immunity. As the flow of blood ceases the container is carefully sealed and placed in a dark refrigerator until some necessity arises for its use.

The bodies of the animals killed in this operation are cut open with the knife and a post-mortem examination is held. This post-mortem examination is utilized as an educational meeting. Interested farmers, breeders and veterinarians are thus afforded an excellent opportunity to study the various post-mortem symptoms of the disease. They soon learn to recognize ulcers, hemorrhagic spots, friable (easily punctured with the finger) spleen, "turkey-egg spots" on the kidneys, enlarged lymph glands, etc., as more or less reliable indications of the diseased condition following hog cholera infection. By means of these clinics the layman secures much valuable information about hog cholera. This knowledge is at once scientific and practical. It gives him some idea of the principles governing the use of serum and prevents him being imposed upon by "worm experts" or salesmen for any unreliable brand of hog cholera serum, or half-informed veterinarian practitioner of the so-called "rough and ready" type.

After the post-mortem examination has been performed the carcasses of the virus hogs, together with all offal and body discharge are consigned to the rendering tank. Here, great pressure and extreme and long continued heat render the entire mass free from living disease organisms. The by-products evolved from the rendering tank consist in soap grease, tankage and fertilizer. The grease goes to the soap manufacturers while the tankage and fertilizer are used locally or sold upon the general market. There is absolutely no danger of spreading disease through these by-products. They have been sterilized.

Hyperimmunity or hyperimmune animals are produced in this manner: A certain amount (dependent upon the weight of the animal to be treated) of carefully tested serum is injected under the skin of a normal, healthy hog. This is followed by an injection, made in like manner, of a small amount of weakened or attenuated virus. This weakening of the virulence of the organism is accomplished by heating the virus to a comparatively high temperature for some little time. The animal is now said to develop an "active immunity." If serum alone is injected the animal is said to possess only "passive immunity." That is, the animal treated did not have anything to do with the procuring of that immunity.

No diseased condition is produced by these two injections. This, at first thought, seems strange, since disease organisms were introduced into the animal's system. However, the specific antibodies found in the serum injected counteract or overcome the action of the disease-producing organisms contained in the weakened virus injected at the same time. The injection of even a small number of dead and weakened hog cholera organisms, however, does tend to incite the body of the hog to the production of excessive numbers of antibodies for these organisms; therefore the animal treated takes an active part in the production of immunity.

Some ten days later the efficiency of this active immunity is tested by a subcutaneous (under the skin) injection of from two to five centimeters of fully virulent blood. If no unfavorable reaction occurs, the last step in the production of hyper or extra immunity is taken. This consists in the intraveinous (into the veins) injection of five cubic centimeters of virulent blood to each pound of live weight in the animal treated.

The amount of virus used in the case of a 200-pound hog would amount to nearly a quart. The point of injection is the large ear vein. There are two reasons for selecting the ear for such injection, i.e., it is the most remote and is most readily accessible for the operation. A hollow needle is inserted into the vein and by means of connective tubing and a large rubber bulb the virus is gradually drawn and forced into the blood stream of the hog. The normal blood pressure of the animal is thus vastly increased and a small percentage of the animals die as a direct result of the operation. The vast majority live and at the end of about ten days may be considered as hyperimmunes. They are now ready to produce serum.

The serum is prepared by removing the corpuscles and any other coagulating material from the blood of the hyperimmune hog. This is accomplished by passing the blood through an unglazed porcelain filter under pressure. To secure the blood it is necessary to place the hyperimmune in a crate elevated upon a wheeled standard. The hog is carefully strapped down and the crate is shortened to the exact length of the animal by means of an adjustable end door. The tail of the animal projects through the end of the crate. It offers the most convenient point from which to draw blood with little or no danger of contamination and with little inconvenience to the operator.

The tail of the animal is carefully shaved and treated with a disinfecting solution. Its end is then snipped off, and, with little pain to the animal, five cubic centimeters of blood for each pound of live weight are drawn off into a sterilized glass container. The mouth of this container is covered with a thin sheet of sterilized cloth which has been moistened with distilled and sterilized water. This moist covering prevents the entrance of foreign organisms, dust or any other form of outer contamination. The end of the tail is admitted into the jar through a small slit cut in the cover cloth.

Several sterilized glass beads are shaken about in the container while the blood is being drawn and the fluid is thus prevented from coagulating. When properly filtered, tested and preserved from the growth of foreign organisms by means of an addition of a one-half per cent solution of carbolic acid the serum is ready to be placed on the market. It is now hog cholera serum of the highest efficiency.

After the initial bleeding the hog is turned out into the feed lot to regain its normal flow of blood. The end of its tail has been carefully cauterized and further loss of blood checked by the application of a catgut tie. When fully recovered the animal may again be bled in the same manner as in the previous operation. This bleeding operation is usually repeated three or four times according to the natural recuperative powers of the individual, due time being allowed between each operation for such recuperation to take place.

If, after these four operations, enough of the original tail length of the animal remains to warrant further bleeding operations the hyperimmunity of the animal is brought up to standard by an intraveinous injection of four cubic centimeters of virus per pound of live weight. The animal may then be bled once or twice more in the same manner as in previous operations.

The beautiful scene shown above was taken on the farm of E. W. Crossgrove & Son, Farnam, Neb. These gentlemen have a section, and on it they maintain one of the good Short-horn herds of the country. They will have a public sale March 11th.

Mitchell Little Six
$1,895

Eighty Years of Faithful Service to the American Public

The Mitchell-Lewis Motor Company has the enviable record of *eighty years of faithful service to the American public.* Bear this in mind when you get ready to buy a car, for it operates as *insurance of quality.*

Eighty years of faithful service is an asset *of no uncertain value.* This company held the respect of the early settlers of the western country because of absolutely honest merchandise in the shape of farm wagons. It established its standing before automobiles were known. When it embarked in the automobile business, it clung to the policy that made its farm wagon business famous. And its automobiles are famous, *for the same satisfying reason.*

You've got something behind you when you buy. Our standing and prestige constitute a *bulwark of safety.* Add to this the remarkably fine character of the Mitchell Models and your purchase is *as solid as the Rock of Gibraltar.* Ask any farmer in America what he thinks of the old Mitchell-Lewis Wagon Company. Ask any one of thirty thousand Mitchell automobile owners what he thinks of the Mitchell-Lewis *Motor* Company. Their reputation and reliability are precisely the same.

The Mitchell Models for 1914:

The Mitchell Little Six—fifty horse-power—132-inch wheel base—36x4½ inch tires—two or five passenger capacity - -	$1,895
The Mitchell Big Six—sixty horse-power—144-inch wheel base—37x5-inch tires—seven passenger capacity - - - -	$2,350
The Mitchell Four—forty horse-power—four cylinders—120-inch wheel base—36x4½ inch tires—two or five passenger capacity	$1,595

Equipment of all the Mitchell Models Included in the List Prices Here Given

Electric self-starter and generator—electric lights—electric horn—electric magnetic exploring lamp—speedometer—mohair top and dust cover—Jiffy quick-action side curtains—quick-action rain vision wind-shield—demountable rim with one extra—tungsten valves—double extra tire carriers—Bair bow holders—license plate bracket—pump, jack and complete set of tools. Prices F. O. B. Racine.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

WINTER EGGS.

There is such a thing as overdoing in kindness to fowls. All too often mistaken coddling defeats the aim in view. We have an example of this in a letter from an Iowa woman who signs herself "Farmer's Wife."

I am a farmer's wife and I am getting more interested in poultry raising, and especially interested in what is said in this paper. I have 300 hens and pullets, the pullets are May and April hatch. Would you fully explain to me what to do and what to feed? I keep Black Langshans and Rhode Island Reds. We are getting only eight to ten eggs a day. My henhouse is frame, thirty feet long and eight feet wide, facing the south. It is weather boarded and plastered, has three windows, one of which is covered with canvas. There is a long shed on the east end, in which the water trough is kept. I feed them all the corn and wheat they will eat, keep oyster shells before them all the time, give table scraps and all the milk, both sweet and sour, that they will drink. Also beef meal which I feed in soaked wheat. The corn is scattered in clover hay. They are healthy, and their combs are red. These hens have free range, and get plenty of grain with the stock.

"Farmer's Wife" has good winter layers, a good poultry building, a variety of good feed and is putting energy and enthusiasm into the work. On the other hand, the space is too limited for so many hens, and if that heavy feeding continues without a super-abundance of exercise, there will probably be adverse reports of that flock. If the long shed mentioned can be utilized for a scratching shed, after the fowls must be confined, the space might do, though a hen should really have at least five feet of floor space. About grit—do they have access to it? Also is it well to give charcoal, and especially when the fowls are so heavily fed. This is what a flock of twelve pullets did at Cornell: Averaged eighty-two eggs each during their first laying year. Another lot of fifteen averaged 236 eggs. One White Leghorn pullet, 457 eggs in two consecutive years. The winter grain ration was composed by weight, of sixty pounds wheat, sixty pounds corn, thirty pounds oats and thirty pounds buckwheat. The summer grain ration was the same, only the buckwheat was withheld. All was fed in deep litter. A dry mash, composed of corn meal sixty pounds, wheat middlings, sixty pounds, wheat bran, thirty pounds, alfalfa meal, ten pounds, oil meal, ten pounds, beef scrap, fifty pounds and salt, one pound, was well mixed and kept in hoppers. The fowls had access to this mash in the afternoon only. In addition, an abundance of succulent feed was given—sprouted oats, cabbage, beets and other green feed. It should be remembered that green feed does not necessarily mean succulent feed. Our correspondent can take this as a basis, and work from it to fit her own special needs. The milk she mentions is good, both as to furnishing protein, and promoting health. Less beef scrap may be used when the flock have access to a liberal supply. Fifty hens rightly cared for will produce more eggs than 300 hens in one flock, especially if crowded. Any successful poultry keeper will tell you the story of the experiment stations—variety of feed, sanitary surroundings and attention to details.

FARMERS NOT RESPONSIBLE FOR THE HIGH PRICE OF EGGS.

A dollar a dozen for eggs is now threatened in New York. No farmer living has ever seen the color of that much money for a single dozen of eggs. Few ever have realized half that amount, and the plain English of it is, that no farmer averages 25 cents a dozen, taking the year round. This does not apply to people who make a business of the poultry industry, and live in close proximity to the city markets.

From March until October is the harvest of eggs on the average farm. The price ranges from 12 to 18 cents, or possibly a trifle higher, late in the summer. By far the greater number are sold at about 15 cents. With the first really cold blast of winter, these same eggs sell for three, and very often more, times this price. Who gets the profit? Not your storekeeper, surely; the country merchant has several troubles of his own, and, counting the good and the bad, especially the bad, he would much prefer that you paid him cash for groceries, and take your chances on selling eggs elsewhere.

Neither is the huckster getting rich. He gathers up the eggs through the torrid months, knows about how many of them will never pass muster, pays low enough so that the good will even up the bad, and goes his way, content with a very few cents' doubtful profit.

It is fully understood that these eggs go into cold storage. The profit goes to the men who store them. It is estimated that it cost 12 cents a dozen to produce eggs where everything is bought to feed the hens. The producer gets something like 5 or 6 cents profit; the cold storage man gets from 25 cents up to any price he can get them cornered for. This is the whole situation in a nutshell. It is based on experience, first, and statistics, after.

Well, what are we going to do about it? The present boycott on eggs can be only a temporary help, at best. Just as soon as the prices are lowered to meet the demand of the boycotter, and they begin to buy, then will the price go skyward again; this is the law of supply and demand. If the people heading the boycott movement used the same zeal in getting in personal touch with the producer then would it avail something.

Farmers should have co-operative storage plants of their own. When the masculine portion of the farm households take the interest in the poultry question that it merits, then will something in this line be done. The women raise the chickens, the income of which nets this country three quarters of a million dollars. They have little choice in the matter of the disposition of their products.

What would be thought of a farmer who made no provision to store his grain until the market warranted his selling? Yet this is exactly what is being done with that most important of all farm products—the egg.

LINE BREEDING IN POULTRY.

Mrs. J. H. B., Illinois, has, by dint of hard work and much expense, built up a flock of pure-bred White Wyandotte chickens and does not wish the flock to run back. She writes:

We began with the best known strain, and the best individuals that we could afford to buy. Each year we have been improving our flock, until now the question is, how to keep it up to its present standard. The flock of 150 hens have the run of the farm, which necessitates the purchasing of such a great number of cockerels as to make the expense too heavy for any prospective gain. Now, could we use some of our own stock without danger of running our flock down? If so how would you advise the matings to be made? We have some splendid yearling cocks that were purchased last year.

This question involves the principle of line breeding. Systematic line breeding, meaning mating related birds of special excellence, those that have proved beyond a doubt that they will reproduce their kind, will neither run the flock down in either size or stamina. An offspring will more nearly resemble that parent which has the longest line of inherited ancestry, whether it be good or bad, and so the more generations behind the good qualities the better. For this very reason, our correspondent may safely mate certain individuals of her own flock, of which she knows the ancestry, than a bird of which she knows little, or nothing, no matter how promising his appearances as an individual. In this case it would be advisable for our correspondent to keep the yearling cocks to head the range flock next year. This is really the best of all line-bred matings; that of the sire and his pullets. To furnish cockerels for the range another season, ten of the best yearling hens should be selected from the flock; the ones, in your opinion that more nearly measure up to your "yardstick" of what a White Wyandotte should be. Even though every breeder takes the standard as a model, each and every one stamps certain characteristics in his flock. The practiced eye of a judge can tell at a glance whose strain he is judging. To head the few selected hens there should be a cockerel purchased from the same breeder where the start was procured. Use the cockerels from this mating another year, purchasing a male, preferably a cock, for the head. It is to be recommended, that one part of the yard be young blood, while the other side is fully matured stock. In this manner it will be necessary to purchase one male each year instead of many; instead of putting a long price into so many mediocre birds, invest the money in one superior male each year. Many of the most successful breeders never

140 EGG INCUBATOR CHICK BROODER
Freight Paid East of the Rockies
The incubator is California Redwood, covered with asbestos and galvanized iron: has triple walls, copper tank, nursery, egg tester, thermometer, ready to use. Both For $10

SMALL ADVERTISING GETS BIG BUSINESS

AN INSTANCE of unusual returns obtained through poultry advertising in The Homestead is shown by a letter written by Miss Emma Holtz, Wilber, Neb., in which she says: "I advertised eggs from my imported English Blue Orpington ducks in The Homestead, using but a small advertisement, and running it only a short time late in the season. I received plenty of inquiries and most of them resulted in orders. I am very much pleased with the results." It seems that Homestead readers are interested in duck raising to a remarkable degree. This should encourage other duck raisers to send for advertising rates. Address,

HOMESTEAD CO., POULTRY DEPT., DES MOINES, IA.

LEGHORNS.

ROSE COMB BROWN LEGHORN COCKERELS

go out of their own flock, once it is established to suit them, for new blood. This would be a dangerous proceeding for any but the most experienced.

EQUALIZING EGG PRICES.

To the Editor:

The price of eggs is exciting much comment at the present time and ridiculous cartoons are appearing in the daily papers. At the same time there is general condemnation of cold storage, the one thing that has heretofore equalized egg prices between summer and winter.

It is within my recollection, just before the general adoption of cold storage for the preservation of food products, that, during the spring and early summer, eggs would be worth 8 to 10 cents per dozen. Then, in the midst of an ordinarily severe winter, the price would go up to 50 or 75 cents per dozen.

After cold storage had been proven effective for preserving eggs, the price soon became equalized, ranging between 15 and 25 cents per dozen the year round, with feed about half the cost of the present time.

So long as it is possible for any family, in town or country, to keep one or two dozen chickens in the backyard, with little or no expense for feed or care, it is no more possible for any person, corporation, or combination to corner the egg supply than it would be to corner the bread supply so long as there is flour for sale in the market and housewives willing and competent to turn it into bread.

With the present high prices for feed there is little or no profit in eggs at 30 cents per dozen except in case of the backyard flock, fed principally from table and kitchen scraps. Here it is most all profit and it is surprising that more people do not put in a few hens instead of consuming an ancient product and kicking about the price.

Eggs will continue to be eggs, and will steadily advance in price just so long as people continue to do two things. First, sell their eggs during spring and early summer, because of good prices, instead of hatching and raising more chickens. Second, avoid the small expense and labor incident to the keeping of a small home flock.

There is no complaint from those who keep chickens about the high price of eggs. Such complaint comes exclusively from those who do not raise chickens; who don't want to be bothered with them; who want someone else to do it for them at a price less than cost of feed.

For several years there has been an increasing demand for eggs and a decreasing supply—the latter due to high prices for grain and other feed, unsuitable breeding and hatching seasons, and good egg prices that tempted the selling of eggs for culinary purposes rather than their use in incubation.

What is a good, fresh egg from well-fed, healthy stock really worth? If we have been accustomed to paying ten cents a dozen, then we will consider 20 cents a dozen as extraordinary and inexcusable. If, however, we have been used to paying one dollar a dozen then we would consider 60 cents a dozen a downright bargain.

Personally, I would much prefer a couple of good, fresh eggs at 5 cents apiece than 10 cents worth of beefsteak. But, then, preferences don't count. We have to pay a premium if we want goods of any kind that are scarce, and just so long as the great majority of home owners prefer to consume rather than produce, then just so long will eggs maintain or advance in price. G. H. L.

From a once despised line, tolerated under protest, the poultry business is now recognized as one of the most valuable industries of our land, contributing hundreds of millions of dollars to the wealth of the country. Three quarters of a million of dollars is realized annually from the American hen, equaling the combined value of potatoes and oats, and equal to the wheat crop of the United States. The reurns from one hen must, of a necessity, be very small, but the output from the whole feathered tribe is fairly startling. Not only has the business increased in volume, it has increased educationally. More and more, the colleges of our country are realizing that the study of poultry culture is just as essential as any other one thing.

POINTERS.

—Single Comb Brown Leghorn cockerels are advertised by P. Mason, Calamus, Iowa, on page 14.

—Mrs. Geo. W. Goble, Kansas, Ill., advertises Black Langshan cockerels at reasonable prices on this page.

—White Plymouth Rock cockerels are advertised on page 16 by C. L. Carter, R. R. 1, Panora, Iowa.

—Mrs. J. M. Easter, Bonaparte, Iowa, quotes exceedingly low prices on mammoth Pekin ducks and drakes.

—The advertisement of M. L. White, Altoona, Iowa, offering Barred Plymouth Rock cockerels for sale will be found on page 16.

—M. A. Whisler, Udell, Iowa, advertises White Wyandotte cockerels and White Holland turkeys on page 16, and quotes attractive prices on both.

—Warren Hughes, Littleport, Iowa, quotes quite reasonable prices on Mammoth Bronze turkey hens, Pekin drakes in an advertisement on this page.

—On page 16 will be found the advertisement of R. S. Tennyson, Clarksville, Iowa, offering White Wyandotte cockerels from prize-winning stock for sale.

—J. P. Hertzog, Blue Springs, Mo., has some high-bred Narragansett turkeys that he is offering for sale to Homestead readers in his advertisement on this page.

—Buff Orpington and Rhode Island Red cockerels can be ordered from C. R. & R. W. Steele, Ireton, Iowa, at $2 each or three for $5. Read the advertisement on page 16.

—On this page appears the advertisement of Mrs. Thos. M. Miller, Selma, Iowa, offering scored and unscored Mammoth Bronze turkeys and Buff Plymouth Rock chickens for sale.

—Mrs. W. O. Thomas, Corning, Iowa, has some choice Buff Cochin cockerels and pullets, on which he will make holiday bargains if taken soon. Her advertisement appears on page 14.

—A. Christopherson, Garden City, Iowa, advertises Rose Comb Rhode Island Red cockerels on page 16. They are especially desirable birds and very cheap at the prices quoted.

—Messer Farms, R. 9, Waterloo, Iowa, advertises on page 16 that they have for sale Single Comb Rhode Island Red and Single Comb White Leghorn cockerels and quote prices.

—Arthur Dearinger, Reasnor, Iowa, has eighty-five big boned Black Langshan cockerels that he is offering for sale to Homestead readers in his advertisement appearing on this page.

—In an advertisement on page 14 Mrs. W. S. McNutt, Sheldon, Iowa, announces that she has for sale Single Comb White Leghorn cockerels and quotes very low prices on them.

—W. H. Miller, Lynnville, Iowa, can supply Homestead readers with Single Comb Rhode Island Red cockerels. The price will be found stated in the advertisement found on page 16.

—Mrs. Hattie J. Jennings, R. 1, Beaconsfield, Iowa, advertises on page 16 that she has for sale Barred Plymouth Rock and Single Comb Brown Leghorn cockerels and White Holland turkeys.

—John Peterson, Randall, Iowa, is publishing a list of prizes won on his Barred Plymouth Rocks at the Iowa State Fair, Marshalltown and Gilbert shows. His advertisement appears elsewhere on page 16.

—R. H. Coyle, Cascade, Iowa, whose advertisement appears on this page, desires to announce that he is again prepared to furnish Homestead readers with Mammoth Bronze turkeys from a flock that is larger and healthier than ever.

—Geo. D. Camp, Mt. Vernon, Iowa, advertises White Wyandotte cockerels of the Keeler strain on page 16. He offers high-class birds at, from $3 to $10 each, and a few younger ones at $1.50 each. Send enquiries to the above address.

—There appears on page 16 the advertisement of H. A. Zobel, Dysart, Iowa, offering Rose Comb Rhode Island Red cockerels and cock birds and Rouen ducks for sale. He has them both scored and unscored and will guarantee satisfaction.

—Mrs. Geo. W. Long, Richland, Iowa, who advertises White Wyandottes on page 16 raises that one breed exclusively. She has in her flock a strong infusion of the famous Regal blood, imported from Canada. The prices quoted are reasonable.

—Mrs. Laura Mather, Clarksville, Iowa, in furnishing copy for her Rose Comb Brown Leghorn advertisement that appears on page 14, writes: "I have the finest and best high-scoring birds that I have ever bred. They are so uniform that they are all alike. They are of a great laying strain."

—Writing under recent date, E. S. Dyas, Bellevue, Iowa, whose advertisement appears on this page, says, "Our White Wyandotte chickens and Pekin ducks are the best we have ever raised. Any order which we may receive will be filled to please the customer. Our young birds are from prize winners, and, what is more, they are themselves prize winners.

CHALK WHITE White P. Rocks. The prize-winning kind. Sold 12 to Iowa State Agricultural College. Large, heavy boned, farm raised. Mrs. J. C. Forsythe, R. 5, Griswold Iowa.

A **FINE LOT OF BARRED PLYMOUTH ROCK COCKERELS** for sale, $1.50 to $2.00. Address **M. L. WHITE, ALTOONA, IOWA.**

HIGH SCORING, large boned B. P. Rocks for sale. Unscored birds of both sexes. Eggs in season. Fine laying strain. Mrs. W. S. Kern, Plainfield, Ia.

ners. Our Wyandottes are of the mammoth strain and the Pekin ducks are of the Batchelder strain." As the advertiser has never been able to supply the demand, our readers will do well to get in their orders quickly.

—Our readers who are looking for strictly good Pekin ducks should get in correspondence with J. M. Hall, Williams,, Iowa, whose advertisement appears on this page. Mr. Hall's birds were first and second prize winners at the late Iowa Falls show. He quotes reasonable prices.

—Silver Wyandottes, farm raised and heavy boned, lusty fellows, scored and unscored, are advertised by Miss Julia Driscoll, Plainfield, Iowa. Miss Driscoll makes a specialty of this breed and has about sixty cockerels for sale. They are good ones that cannot fail to please and will be sold at reasonable prices. See advertisement on this page.

—K. O. Knudsen, Marion, Iowa, whose advertisement offering Barred Plymouth Rock cockerels for sale appears on this page, writes: "The birds that I am advertising for sale are extra good farm raised and will weigh from seven to nine pounds each. They will surely give satisfaction.

—Mrs. W. S. Kern, Plainfield, Iowa, advertises Plymouth Rocks on this page. She writes that she has very fine cockelers, pullets and hens for sale, that they are extra large boned, have good combs, are well barred and belong to good laying strains. They score from 88 to 92 points. She solicits correspondence.

—Le Roy Owen, Wayne, Neb., advertises Cook's Single Comb White Orpingtons on page 15. He advises us that the birds which he is offering for sale will make great breeders for the coming season. They are from his best yards. As he is overstocked he will make some unusually low prices on fine birds. Write to the address named.

—E. D. Hamann, Persia, Iowa, whose advertisement offering Single Comb Buff Orpington cockerels for sale will be found on page 15, writes: "The cockerels I am offering for sale are April and May hatch. They are large for their age and are extra good in color. They are bred from a winter laying stock and are sure to please at the prices quoted."

—Chas. J. Mackey, West Liberty Iowa, breeds Single Comb White Leghorn chickens and advertises cockerels on page 14. Mr. Mackey is an old advertiser in this paper, and while his birds have always been good ones he now believes he has something superior to anything that he has before sold. He wants to make quick sales and will let them go at from $1 to $5 each.

—Mrs. Howard R. Moore, Stuart, Iowa, in furnishing copy for her advertisement offering Single Comb Rhode Island Red cockerels for sale appearing on this page, writes: "These cockerels are from high scoring stock and are large boned, vigorous birds of a rich red color, with smooth yellow legs and good combs. Pen No. 1 was headed by a ten and one-half-pound cockerel that won first at Southwestern Iowa Poultry Show, December, 1912."

—A. E. Muxlow, R. 4, Independence, Iowa, places an advertisement on this page announcing that he has for sale Bourbon Red turkeys, Indian Runner ducks, Barred Plymouth Rocks and Buff Orpingtons. At his recent local poultry show Mr. Muxlow won first on toms, first and second on turkey hens, first on Plymouth Rock cockerel and a total of fourteen ribbons in all. His Orpingtons are bred from stock scoring 90 to 93 points and his Plymouth Rocks are of a good laying strain.

—Eugene Haws, Charleston, Neb., is starting an advertisement in this issue of The Homestead offering Mammoth Bronze turkey toms. Mr. Haws is an expert stockman and poultry breeder. He raises several breeds of pure-bred stock, and they are all choice in their respective breeds. These turkey toms are the sort that Homestead readers will want to improve their ordinary flocks and to maintain their extra good flocks. Prices will be mailed on application. Better write him, and without delay. Mention The Homestead when doing so. See advertisement on page 15.

—Mrs. F. R. Barrett, Cadams, Neb., has a choice strain of Barred Rocks that have been bred on the same place so long and with a certain fixed ideal until they have become characterised as Barrett's Rocks, and the name is a good one. These are extra choice birds that make up this flock. They are big and heavy boned, bright yellow legs, nice bay eyes, good beaks, ringlet barring and in short they are ideal fowls. They have also been bred for a long time for egg production, and they are making a record as a flock that is interesting. Homestead readers in search of good stock will do well to write Mrs. Barrett. She prices cockerels at from $1.50 to $4 and pullets at $1 each. See the advertisement on this page and write without delay.

—Chalk white White Plymouth Rocks are the kind that are offered for sale by Mrs. J. C. Forsythe, Griswold, Iowa, on this page of The Homestead. Mrs. Forsythe breeds the White Plymouth Rocks exclusively and lives on a large farm where the birds have free range and plenty of shade. She is a very careful breeder and has been securing the best blood money could buy and the fact that the Iowa State Agricultural College purchased from her twelve choice birds for the college, at a long price, goes to show that she has the best that can be found. Judge J. L. Todd, who scored her flock last week, says they are the best flock he has seen for several years. They have the size, shape and chalk white color. Her prices are very low, for quality of stock. Don't forget to mention The Homestead when writing her.

PLYMOUTH ROCKS.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Rural Route No. 56, Box 21, Philo, Illinois.

WITH THE EDITOR.

It is nearing the beginning of another year. Would that it were possible for the editor to answer personally all the helpful, encouraging letters of good cheer that have reached her desk; that is practically impossible, so this method is used to express the appreciation of it all.

One letter of particular importance is selected, from which some parts are quoted. It is from a woman of much literary importance, whose name is widely known as a writer of farm topics. The letter is personal, and for the present, at least, her name is withheld. Her letter in part, says:

Today I met with a happy surprise. In looking over the paper, a positive necessity in our house, my attention was suddenly arrested, and I mentally said: "That editorial was never written by anyone who did not live on a farm, and had not lived what she wrote." You have the best opportunity in this world to help to inspire the households in thousands of farm homes to a better appreciation of rural living. I have always contended that we have cultured women on the farm who could write what they lived. A farm journalist is the only kind of editor that can meet with the approval of farmers any more. This paper is a great field in which to work. I think the "Publisher's Views," by James M. Pierce, is one of the most popular features the paper has ever had. Now that two distinctive features have been introduced, the admirers of this farm journal will be added to in hosts. Nothing can be offered that touches so many people as a live, practical home department. It is with congratulations, and the hope that you will find much to live for in your work of 1914 on this paper that I send you this letter.

This letter was received before the other new department, "The Experience Club," was started. It, too, promises much.

Without exception, every place where the editor has attended farmers' institutes, has she been asked this question: "Do you live in town?" It is the old, old story—that of people thinking that to be able to do anything out of the prescribed rut a person necessarily lives in town. On being assured in the negative, one discerning woman said: "If I had looked at your hands I would have known without asking."

Those same hands are not much to look at, friends, that is a fact. They have washed and ironed, baked and brewed, scrubbed and cleaned and mended; yes, and sometimes spanked a little, just as you did, it is to be hoped. The greater part of the editor's life has been spent in this kind of work, kissing little bruised knees, "to make 'em well," mending bumped heads and healing broken hearts.

It is an exploded theory that, because a woman raises boys, and feeds the chickens and pigs, she necessarily knows nothing else. There is surely nothing in farm life to cause one to know nothing else, unless they will it so. Neither is there any excuse for monotony.

Last week we could dig in the good fresh earth, and the effect was something, I think, like the "call of the wild," to a primitive man. Anyhow, it was irresistible, and we kept digging, just for the pleasure of the clean, wholesome odor. Today the ground is covered with snow. Later there will be fields that are plowed, and fields of green; patches of meadow and pasture land. A few weeks later, and there will be rows of new corn; rows and more rows; east and west, north and south, cornerwise and otherwise—always in rows.

A few months, and all is changed; the country is ever changing. Each change is a picture of itself. To the editor's mind the most beautiful picture on this earth is that of a field of corn shock, with a profusion of big, yellow pumpkins lying on the ground.

"Lonesome on the farm?" If even tempted to feel lonesome or blue, just take some lumps of sugar, go down into the pastures and make chums of the young things—colts, for instance.

Our New Year greeting to those who have, by their encouragement, helped smooth the hard places, will be a quotation from Henry VanDyke: "In love and friendship, small steady payments on a gold basis, are better than promissory notes." Meaning, cheerful greeting, sympathetic interest, helpfulness and encouragement. And so, instead of trying to do one immense thing, it will be our privilege to send out "small steady payments" throughout the year to come.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

I find the great thing in this world, is not so much where we stand as what direction we are moving.—Oliver Wendell Holmes.

Shallow men believe in luck; strong men believe in cause and effect.—Ralph Waldo Emerson.

Our lives are albums written through
With good or ill, with false or true.
—John G. Whittier.

HOMESPUN WRINKLES.

It is desired to make this, as well as "Things Good to Eat," special features of this department. Our readers are invited to send in any "wrinkle" they have found to be a help. Also any recipe that has been tested, and found not wanting. In this manner we will have a regulation exchange of our own.

TO REMOVE STAINS.

Blood.—Soak in cold water and place in the sun.

Glue.—Apply vinegar with a cloth until removed.

Grease.—Use tar soap or turpentine.

Paint.—If fresh, use benzine. If of long duration, rub with vaseline and then wash in benzine. If on your hands, rub in vaseline and then apply turpentine.

How many of you care for yourselves? I didn't, and now I am not good to look at. We owe it to ourselves, and to our children, to make the most of ourselves. If this does not drop into the waste basket, I'll call again.—An Old Mother.

[Please do come again. We thank you for your suggestions.]

THINGS GOOD TO EAT.

I am much interested in this part of our department, and wish to add a suggestion about the ways of cooking rabbits. Cut the rabbit in small pieces, and place in a stew kettle with a quart of water. Add pepper, allspice, nutmeg and a little red pepper. Also some onions, if liked, and a half cup of vinegar. Cook slowly until tender, and before serving thicken the broth with a tablespoonful of flour stirred smoothly into a little water. If dumplings are desired instead of the gravy, let them cook uncovered fifteen or twenty minutes, and then cover. They will be much lighter, and not fall.—Mrs. John Haymana.

[It is said by people who have tried it that the above method will render rabbit palatable, when otherwise it would be passed by.]

AMONG OURSELVES.

We have a new inquirer today, who signs her name "Mrs. Perplexed:"

I so much enjoy reading the home page of our paper. I wonder if some of you who have had a longer experience in wedded life than I would give me some advice, which I think I need. You were so kind to "Mrs. Lonesome" that I believe you will. My experience has been very much like hers. Some say that if the husband will not be interested in the wife's ideas she must try to interest herself in what he enjoys. From my childhood I have had an aversion to card playing. Yet that is my husband's chief enjoyment. He has tried to teach me, and thinks it is because I am slow to learn that I hate the game. But it is because I was brought up that way. What shall I do? He doesn't care for reading, and he doesn't care for music. He does care to go to town, and, according to my notion, a man is safer at home with his wife a few nights each week. But he doesn't care a bit for the things that interest me. It is games that he likes. He says that cards are no more harmful than any other game. It looks that way to me too. And yet, if I were to play, a guilty feeling comes over me, just the same as if I were to steal or lie, or do some other thing I had been taught was wrong. I know there is a wide difference in what people consider right and wrong. I have been told that many of the victims in the famines of India might have been saved if they had eaten the flesh of some of the animals which they hold sacred. And yet I don't know. A soul is worth more than a principle. Sometimes it seems that if I were to interest myself in cards, and keep him at home at night, it would be much more sensible than to hang to my old idea. And yet—Bible reading and card playing sound kind of funny in the same house. If it were anybody else than my husband it would be different. I wish you would tell me what to do. I would like to hear from several.

This question applies to boys as well as to husbands. It is a question of vast importance; our friend's trouble is very real and in danger of becoming tragical. Let us hope the experienced will give some light on the subject.

"B. F.," Missouri, sends a poem. It should be a sure cure for the "blues:"

If you think you're down and out,
And you wish your cares to rout—
Be cheerful.

If you think you've reached the end,
And disaster o'er you pends,
Be cheerful.

If it seems you've lost the race,
And you cannot keep the pace—
Be cheerful.

Though it seems as black as night,
Seems as though things can't come right—
Be cheerful.

Dark it seems before the morn,
So e'en though you feel forlorn,
Be cheerful.

For the morn is sure to break—
Think of all you've got at steak;
Be cheerful.

Mrs. Gover favors us with a New Year's story that is true:

It was in a small village in Nebraska, where a lone widow and her son lived twenty years ago. The son's name was William, and he was eighteen years old. He was a great deal of help to his mother. He had a friend in the same town where he lived, who persuaded him to run away from home with him. It was a July night that they started off together. Although William loved his mother dearly he could not resist the temptation; he had always longed to see something of the outside world. No word came from the delinquent until November, when the mother received a letter from him. He asked his mother to forgive him. The grieving mother was so glad to hear from him that she wrote at once, telling him that he was freely forgiven, and he would be welcomed home whenever he came. On New Year's eve the mother was all alone, thinking about her boy. She had set the table, and all the things that William particularly liked were there. An extra plate had been laid, just like it was when the boy was at home. Just as she was sitting down to the table, a faint knock was heard at the door; she opened it—and there was her boy, her own dear son. That was the happiest New Year's either of them ever knew.

Mother love is woven through and through this little story. May some other mother's heart be as glad this beginning of the new year.

An energetic farm woman sends a bright, spicy greeting to our club:

Dear sisters of the farm, please allow me space in your columns to "'spress myself." So much is being written and spoken of the farmers that we are beginning to "feel our oats." We are not the "hayseeds" of forty years ago, and yet we have to be "shown." I was righteously indignant when the professor from Michigan talked to our Iowa teachers, and the papers came out

Double Prices for Your Hogs

Why divide your hog money with the packers? You can do your own killing and get double the price on the hoof, and more. Many a farmer is making a comfortable income making delicious country sausage and rendering pure lard. The market is never fully supplied and prices are always good. Get an

ENTERPRISE

Sausage Stuffer and Lard Press

Does the work quickly and easily. **Cylinder bored true.** Each machine equipped with our patented corrugated spout—the only device that fills casings perfectly and without air bubbles. It makes sausage that keeps.

This machine is accurately made. When used as a lard press, the lard does not ooze over the top. It gets all the lard. Strong and durable.

2, 4, 6 and 8 quarts. 4-qt., Japanned, $5.50. Tinned and Japanned.

You will also want an Enterprise Meat AND Food Chopper—the one chopper made to chop meat. Is fast and light running. Ask your dealer to show you the Enterprise machines and be satisfied with no other. Send 4c for our new recipe book, "The Enterprising Housekeeper," for your wife. 200 practical, delicious recipes. A book she will like.

All sizes, hand, steam and electric power. No. 5, Family Size, $1.75. No. 10, Large Size, $2.50. No. 22, Farm Size, $4.00.

Practical Auto School, 68-E Beaver Street, New York

THIS LONG RANGE TELESCOPE FREE

This telescope when closed, as shown in the picture, is 12 inches long and has a circumference of more than 5 inches. When all five sections are pulled out it is 42 inches long. The lenses are carefully ground and adjusted by an expert at one of the largest factories in Europe. It is built of good materials and is brass bound throughout. A solar eye piece is sent with each telescope to be used in studying the sun and moon and other solar bodies. It is useful also as a magnifying glass.

See Objects Miles Away

With this telescope you can see distant objects which were invisible to the naked eye. Farmer's wife said she could see her husband plowing in a field six miles away. Dairyman found it a great help in watching windmill and cattle in distant pasture during hot weather. It saves long trips and useless worry by enabling you to see distant objects plainly.

Free Offer

We will send one of these 42-inch telescopes, free and postpaid, to all who send $1.50 to pay for a three year, new or renewal, subscription to THE IOWA HOMESTEAD; 156 big, helpful issues for $1.50—less than 1 cent a copy—and this big telescope as a premium.

We guarantee this telescope to please you in every way. We will refund your money at any time if it is not perfectly satisfactory. Address all letters to

THE IOWA HOMESTEAD,
DES MOINES, IOWA.

Solar Eye Piece Sent With Each Telescope. Can be Used in Studying the Sun and Moon.

When writing to advertisers please mention The Homestead.

in big headlines: "Farmers' Wives Drudgery Victims." Now, this is my subject. In any vocation of life we make it what we may. The farmer's life has as much pleasure as any school man's life. I've tried both. As to our conveniences, I believe that our husbands have as many of these for us as they can afford. Many farmers are not as rich as they appear to be, and any woman would rather pump water a little longer than to let the mortgage run so long. All work is only a repetition each day. For we have not the promise of the morrow. When we speak of the pleasures of the country woman and city woman, we must think; what is pleasure for one is not for another. A country woman has no time to spend the afternoons playing bridge, or watching the movies. We have time for reading, sewing, looking well to our household and doing the things which God intended woman to do.

Much of this is sound logic. Nevertheless, every woman who must do all her own work, care for a large family and all the "extras" that fall to the lot of the average farm woman should save herself at every possible turn. Water in the house costs some labor, and very little money. The expense wouldn't lift one corner of a healthy mortgage. The expense of a possible doctor bill might delay the lifting, though. We cannot take ourselves, neither the few, as an example, but the many.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 66, Box 21, Philo, Illinois.

[Will DeWitt A. Campbell send his address to this paper?]

THE MAY CLUB.

(First Prize.)

Twenty-two of us girls got up a club last May. We called it the "May Club." This club was organized with the intention of learning to sew, cook, read good books, and to help any one whom we can. The meetings are held in turn at the different homes.

Last summer we gathered flowers and took them to the poor children in the dark and dirty streets. Now we are going to share our Christmas with these children who have never known the joy of the Christmas spirit.

We are saving all our pin money to use, besides gathering for them all the warm clothes that we have outgrown. Also, we are knitting mittens, hoods, making handkerchiefs and other things to give them. Our brothers have helped, by making toys, as well as kites for the boys.

Don't you think it would be better if everyone would share their Christmas with the poor?

—A May Flower.

[Letters of this kind are very welcome. If you notice, our dear young "May Flower" not only wishes people well, she is one of the busy lot of young folks who get busy and do something. We would like to hear from this club again; about what it is doing, and how it is done. And, children, are you not glad that you are on a farm where flowers may be had for the picking?]

A True Business Story.

(Second Prize.)

I am a farmer boy, and very fond of poultry of all kinds. I keep chickens and ducks, and take them to the fair. I got first prize on them.

Then I bought some traps and began trapping. I caught seventeen muskrats and one skunk. Mamma gave me a goose and I sold that. The money is all in the bank, and next summer I expect to buy a 1914 model bicycle.

—Howard Green. Age 11.

[All honor to the boy who has enough business ability to make money, and, instead of using it up for no good purpose, to invest it in something worth while. At the rate this eleven-year youngster is going, he will have enough money to pay his way through an agricultural school. Of course, he is going to be a farmer, and, of course, he will want to learn it right. Don't be satisfied with just "any old way," Howard. Farmers need to study their work as well as anyone else. This very training is why farmers are no longer the "hayseeds,"—so-called—that they were in the past. Buy your wheel, and then begin to save a part of everything you make for an education.]

The Christmas Spirit.

(Third Prize.)

It was the day before Christmas. When I came home from school, my mother said she had something to tell me. Of course, I was very anxious to know, and she said that there was a poor family, who lived down in the woods, that could not afford any Christmas presents for their little children. She asked us if we didn't think it would be nice to help them understand the meaning of the day.

We asked some of the other girls to bring something, and every one did. There was bread, meat, butter and lots of good things to eat. Some brought clothing, some toys, and everyone did something.

They were very glad to get them, and thanked us very much. We felt much better because we had helped some one.

—Ella, Iowa.

[People, as a whole, do not realize how many truly great people there are in this good old world until it happens to be brought out. Be grateful, Ella, for that noble mother of yours, who is laying the foundation for your future usefulness. It is provoking to hear a few lament about the "good old times," when everyone thought about other people. The world never was better than at the present time, and at the rate the young folks are being trained to a good and helpful purpose, the future will see a yet greater change for good.]

A Tiny Girl's Surprise.

I would like to tell you of a surprise that I am going to give my family of four. No one knows it or it would not be a surprise.

My father will get a tie, my mother will get a set of combs, my eldest brother will get a tie, and by baby brother will get a rocking horse and a rubber ball. I hope they will be happy with these Christmas gifts.

One day at school, we wrote about what we were most thankful for. I wrote that I was thankful for a good home, father and mother. "Merry Christmas" to all our friends of this paper.

—Jolly-Holly.

[This little letter is good. The part that the editor likes best is the fact that our jolly little girl is going to give the mother something for her very own. Something to wear, too. All too often, mother gets a new coffeepot, a tablecloth or some other article that she will use for the whole family more than herself, and it's "no fair." She would like a pretty new waist or a dainty collar. Yes, and mothers have been known to appreciate a ring, or some other luxury that she has denied herself, that the other members of the family might not be stinted. Thank you very much, little thoughtful girl.]

PLEASANT FIELDS OF HOLY WRIT

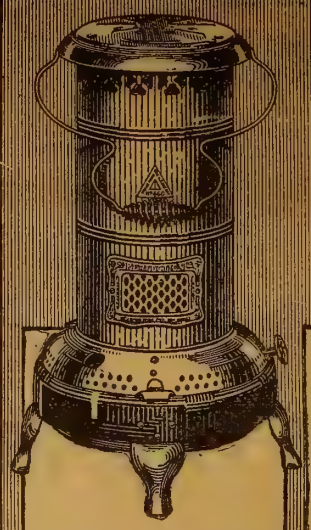
Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 13. Dec. 28, 1913

THE QUARTERLY REVIEW: A DAY OF DECISION.

Twenty-five million people are today studying the vicissitudes of an obscure Syrian race of upwards of three thousand years ago. "What is the use of that? How can it be justified? Could not the time be better spent in the study, for example, of current events" The answer is: "This is a cross-section of human life. The very fact that the scene is so far away and the time so long ago frees the situation from local and current prejudices, which so often prevent clear judgment and right conclusions." The Hebrews of the period under consideration were just men and women with hopes, fears, and frailties exactly like our own. Their story is essentially that of human life in every age and everywhere. In this instance the story is exemplary —instructive, corrective, and inspirational. To any individual or mass of individuals seeking an ideal—ethical, social, or spiritual—this pilgrim and pillar-led march is suggestive and helpful in the last degree. In point of fact, it is just a pictorial representation of humanity's age-long quest for the ultimate good. No progress, either of the mass or of the individual, is a continuous triumphant ascent, unbroken by lapses more or less shameful. How true to nature, in this instance, is the stroke which represents the present ills of Israel as unbearable and magnifies the small comforts of Egypt into delicious luxuries. Over and over, Israel had to matriculate in the expensive school of experience, because, being fools, they could learn in no other. What the people wanted was quail. They did not need them. But the results were disastrous. What happened was a physiological effect of climate and temperature. Natural law is often sharp and sudden in its reprisals. God's bill of fare would have been better for them. Of this, all the graves in the wilderness were a witness. The proverbial lonesomeness of moral leadership has pathetic illustration in Moses. But just when the condition had become insufferable the psychological hour had also come when partition of responsibility could be safely made. It is a marvel of literature—the fidelity with which the Bible pictures the faults of its heroes. No effort is made to create a series of ideally perfect characters. That is what would have happened if it had been a cunningly devised fable. In this instance, for example, Aaron had been his brother's mate from the inception of the Exodus—while Miriam,



Look for the Triangle for Warmth, Comfort and Good Cheer

Burns 10 Hours on One Gallon of Oil

Oil Fount Holds Over One Gallon

To Trim, Wipe Wick With a Cloth

For Best Results Use PERFECTION OIL

At Last The Perfect Oil Heater!

Constant, unchanging heat through every hour of burning, whether the fount holds one gallon or one pint of oil.

With a clear, steady flame that gives clean, odorless heat—no waning and no smell as the oil in the fount gets low. No danger of smoking—a patented lock flame spreader keeps the wick at the proper height—you can't even turn it up to the smoking point.

And no trouble to re-wick. In this newest Perfection wick and carrier are combined. Fresh wicks and carrier come all ready for replacement—trimmed, smooth and ready to light. You have only to turn out the old and slip in the new.

PERFECTION SMOKELESS OIL HEATER

All these wonderful improvements, found in no other heater, are yours in addition to delightful comfort, convenience, and agreeable economy.

You can postpone your regular fires for a month with this handy little stove to take from room to room, wherever you need it, and never have an uncomfortable minute. Ready by striking a match—no fuel to carry or ashes to clean.

Useful all winter in out-of-the-way rooms that are difficult to heat. Drives out chill and dampness in early spring and summer

Your dealer will have the different Perfection models—see them now before the first chilly days bring discomfort. Descriptive booklet gladly mailed free. Just send us your name on a postal.

his sister, had been the virgin Mary, of the Old Testament. Aaron was the incarnation of ecclesiasticism, the embodiment of objective religion, expressing itself in ritual. Miriam organized and voiced the praise of the people on every national deliverance. But it only took both of them a moment to fall from their high estate. The cause of it was very human. Miriam had been the "first lady of the land," and had liked being it. But Moses' wife appeared one day in the camp. Miriam, seeing herself about to be displaced, tried to retain her position by disparaging her brother. Aaron weakly followed her. But God nipped the insurrection in the bud. Two men hang that jury of "spies"—Caleb and Joshua, dauntless souls, demand a hearing. They hush, for the moment at least, the murmur of incipient rebellion. They admit the difficulties, but at the same moment sound that bugle call of faith, "Let us go up at once and possess it, for we are well able to overcome it!" But the ten faithless explorers reiterate the inability of Israel to cope with the "giants," and the demoralization becomes complete. The complaint of the people about that water famine would have been justified if God had not already paved the whole wilderness with his deliverances. They ought to have been able to anticipate the devout exclamation of David, "The Lord hath been mindful of us—he will bless us!" Instead of communing with God, however, they fussed among themselves, with the proverbial result of distrust and bitter ness. The worst of it was that Moses himself lost poise and temper. His offense could not be condoned without lowering the moral tone of the whole people. His punishment was, therefore, exemplary. Balak introduces something brand new in the science of war. It consisted in an attempted concentration of malevolent thought—a concert of evil wishing against Israel—the psychological effect of which would be a subtle moral depression. Success depends on finding a prophet who could draw all into a league of hate. So Balak must have Balaam at any cost. Balaam's descent to hell makes a study in casuistry. His first step was vanity. The king's appeal flattered him. The second step was cupidity. The glint of gold blinded him. No human life was ever more full of scenic incident than that of Moses. From his wave-rocked cradle, onward, it was a march of stirring events. But climax is reached in his death. The event was designed to be exemplary. He was a lawgiver, but he was also a lawbreaker. He must, and do, suffer in the sight of the people the penalty of the law, which he not only gave, but which he also broke. The call was now imperative for a great, determined, tactful, and inspirational leader. Joshua was God's savior for his people. Good blood was in his veins. The natural equipment was supplemented by experience. He had been a slave in the brick yards of Egypt—had witnessed the miracles of the Exodus—had been Moses' lieutenant in the wilderness. It was no novice who stepped to the fore in this crisis hour. The ark, its golden surface glittering in the sunlight, is carried by priests, instead of Levites, and a thousand yards in advance, so that every eye could see it. Under the spreading wings of the cherubim, with their golden feathers, God's people were safe from flood and foe alike. When the feet of the priests, bearing the glittering palladium of Israel, dipped into the torrent, the floods stood still. So God opened Canaan to his people. God's plan for the capture of Jericho was mortifying to the pride of military genius. Joshua's faith shone in the test. He laid all his military science at the feet of the greater Captain. He made the Lord's plan his plan. He put it into execution, in spite of friend's protest or foe's ridicule. The result was one of the most decisive and memorable victories of all human history.

Dr. Mary Pennington, in charge of food research work of the department of agriculture, told the house agriculture committee that frozen and dried eggs would solve the problem of high prices and cold storage corners. "Frozen and dried eggs," said Doctor Pennington, "soon will be marketed in small packages, so as to be available to every household instead of for bakers and other manufacturers as at present. Hard frozen eggs will keep a year, and there is no question that dried and frozen eggs will ultimately displace the cold storage variety." Eggs cannot be kept in cold storage and be fit for food longer than ten months, she asserted, and added that dried and frozen eggs did not lose any of their nutritive value.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6451 Boys' Russian Suit.—No garment has yet been found to replace the Russian suit and this example is one of the most practical. It fastens at one side and along the shoulder. The high neck has either a standing collar or a low turn-down one. Bloomer trousers are worn with the blouse and are given in the pattern.

The pattern 6451 is cut in sizes 2, 4 and 6 years. Medium size requires 2⅝ yards of 36-inch material. Price of pattern 10 cents.

5995 Ladies' Shirt Waist.—Linen, madras or China silk can be used to make this waist. It can be made with or without the box plait at the front and with either the long or short sleeves. The high or turn-down collar can be used.

The pattern 5995 is cut in sizes 32 to 42 inches bust measure. Medium size requires 2⅜ yards of 36-inch material. Price of pattern 10 cents.

5160 Ladies' Apron.—This apron is made with a bib which protects the front of the waist. The bib is made to be slipped on over the head and the skirt part of the apron fastens with string ties.

The pattern 5160 is cut in one size and requires 2½ yards of 27-inch material or 2 yards of 36-inch goods. Price of pattern 10 cents.

5932 Ladies' Dress.—What could be smarter for general wear than this stylish frock, carried out in any of the woolen materials. The dress is very easy to make. It has the fashionable shoulder tucks and closes at the front. The skirt is a three-piece model.

The pattern 5932 is cut in sizes 32 to 42 inches bust measure. Medium size requires 5⅞ yards of 36-inch material, ⅝ yard of 22-inch all-over and ⅜ yard of 24-inch satin. Price of pattern 10 cents.

5980 Girl Dolls' Set.—This set consists of a dress, a coat and a hat. The dress is made with short sleeves and low neck. Serge, cheviot or linen can be used to make this set with the trimming of contrasting material.

The pattern 5980 is cut in sizes for dolls measuring from 14 to 26 inches long. To make the set for an 18-inch doll it will require ⅝ yard of 36-inch and ¼ yard of 27-inch contrasting goods for the dress, ⅝ yard of 44-inch for the coat with ¼ yard of 24-inch silk for the hood and ¼ yard of 27-inch for the hat. Price of pattern 10 cents.

6460 Children's Apron.—The sacque design is always nice for little girls, especially when they attend kindergarten or school, as it entirely protects the dress underneath. This garment is quite plain and is high in the neck where there is a small collar. Two pockets are placed in front and sash ties fasten back the apron from the side seams.

The pattern 6460 is cut in sizes 2, 4, 6, 8, 10 and 12 years. Medium size requires 3½ yards of 27-inch material. Price of pattern 10 cents.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

PROFIT LOST IN MILK.

"The farmer is getting about four cents a quart for his milk. The city consumer pays about nine cents. The solution is co-operative selling."

It was following his address to the Interstate Jersey Cattle Breeders' Association in Kansas City that Eugene Bennett, Missouri's dairy commissioner, gave this solution of the big-milk-bill problem.

"If the farmers would co-operate as they have learned to do in Wisconsin they would establish their own milk route and instead of giving some other man more than 100 per cent to market it, after they have done all the work of producing it, they would be able to furnish milk at reduced rates to the consumer and themselves realize a larger p ofit.

"Suppose twenty dairymen would put their product together and have one distributing system. Think of the saving in wagons and men and the reduction in running but one wagon up a street instead of several of them covering the same general route."

The remarks of Mr. Bennett in regard to the dairy possibilities of his state were greeted with warm applause by the Jersey breeders and they adopted a resolution indorsing his co-operative creamery and county dairy association plans.

"The dairy industry of any state must be developed by the average farmer," Mr. Bennett pointed out, "and nowhere in the nation will you find better cheap grazing land with such a climate as in the Ozarks. It is a shame that we are allowing this land to go to waste while we are sending our most vigorous young men away in search of room to grow up in.

"We don't need more room. There is hardly a Missouri farm either north or south of the Missouri river that could not be cut in two, and with the aid of good cows return its owner a better living than it does at present.

"The worst trouble with lots of Missouri farmers is that they think milking is a woman's job. They work themselves to death trying to grow grain enough to pay the loan they made until harvest, when they might grow half as much grain and milk a few cows and have money all the time."—[Kansas City Star.

CARE AND BENEFITS OF THE MILKING MACHINE.

To the Editor:

My observations in the use of a milking machine are that the cows stand better than by hand milking. After the fourth or fifth milking, cows known as bad kickers, look surprised and then stand quiet with the machine. The milking never excites the cows, and the working and noise of the shaft is all that bothers them the first few times.

I have never heard of one of these machines drawing blood and do not believe it will under proper management.

Each machine milks one cow at a time, but milks all four teats at once. Some people who desire to make quick progress with a few machines, strip a little after changing machine to next cow.

The machine under proper management will require no attention whatever for repairs for a long time, and then the parts which give out can be replaced at a very small cost compared with the general cost of extras on milking machines.

One person can easily operate three machines and the engine after he becomes familiar with the work, and the work is so light that a small boy can do it.

The connecting tubing is made of rubber, while the cylinder is made of brass and there may be an extra bucket to change with when the one used is full, and they may be changed at any time while the machine is in operation, it not being necessary to even discontinue milking while the change is made.

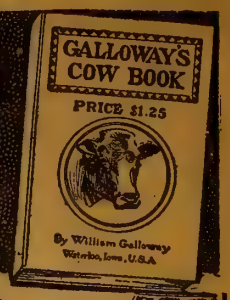
It is not at all necessary to have a special gasoline engine, as the machine will operate successfully with any engine that is strong enough to pull it when the correct size of pulleys are used to give it its rated speed, which is forty-five or fifty revolutions per minute.

The cost of fuel for operating a one and one-half horse-power engine, running three machines, will not exceed one and one-half cents per hour, as when properly installed, they are very easily operated. The operation is often done by means of a tread power, but, considering the cost of a small engine and fuel, would never advise tread-power operation.

The machines are not at all complicated. They weigh but a few pounds and are easily understood by a farmer of any reasonable mechanical ability on agricultural implements.

W. H. Ruther.

I Want To Send You This Valuable Cow Book Free!



Positively the only book of its kind ever written. A complete Manual of Dairying for the modern business farmer giving ALL of the best, modern, scientific dairying methods in clear, plain English. HINTS-SUGGESTIONS-DEVICES

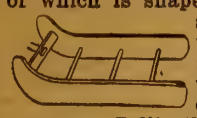
AND CONDENSED LETTERS FROM CORRESPONDENTS

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm or something that is connected with the home.

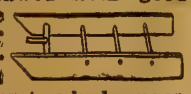
SOME SLEDS.

A sled may be made for use about the farm without the cost of much money. Secure poles from the timber that run about the same size from top to base. It will take four. Cut two of them seven feet and two nine feet. Bore holes in these with an inch auger at such intervals that there will be five holes in each. The holes in one of the short pieces must match the holes in one of the longer. Secure from smaller timber ten spokes about two feet long. Round these nicely at ends and drive in holes. After each pair of pieces are thus fastened together, a shoe for the runners may be made by splitting a hickory sapling in half. Sharpen the smaller ends and insert in holes bored in the ends of long upper pieces. These can be bent down along the runners and nailed or pegged to the runners. Then the runners may be held together by cross pieces, the ends of which are inserted in holes running perpendicular to holes for stakes. The tongue may be made out of a strong pole, the large end of which is mortised into the front cross pieces which should be six or eight inches in circumference. This sled may be used all winter and even longer.

Another sled may be made very cheaply if one can find a tree a part of which is shaped something like a sled runner. Chop the tree down and saw off just above the curve and at the desired length for a runner. Split this in half. Then hue down the outside until the runners are the right width. Then square off the edges. The runners may be fastened together by crosspieces cut the right length and inserted in holes bored in the runners at proper distances. The front piece should be large enough to mortise the end of a pole in for a tongue.

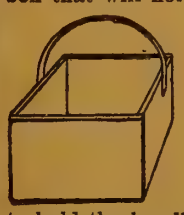


If one is close to a good saw mill he can have runners sawed from good oak timber. These can be put together by crosspieces inserted into holes bored with an inch or two-inch auger. The width of the runners should be three or four inches, so that the sled will be strong.



A Convenient Feed Box.

We have made a convenient feed box by securing from the grocer a box that will hold about a half bushel of grain. Then securing a limb from a tree split it in half and bend one half in a semicircle and fasten the ends to the sides of the box with small nails clinching them inside the box to hold the handle firm. It is no trouble to carry this box around and it takes the place of a basket.



To Keep Rats Out of Barrel.

Often the farmer will have grain in a barrel, and if rats are bad he will desire a covering of some kind. An old galvanized tub may be used for this purpose. Turn the tub upside down over the barrel. It fits tight and no rat or mouse can get inside the barrel of grain.

A Snow Plow.

After a deep snow in the winter a farmer is sometimes perplexed about making roads for himself and his stock. Here is a good plan by which roads can be cleared about the place. Take a couple of boards 2x10 inches. Bevel two edges so they will fit together then bolt them. They should slant out in the form of an A. Then pieces may be inserted in holes bored in the side pieces so as to hold them apart. A strong wire or chain can be inserted through holes bored in the point to which a clevis can be attached. Then a team can be hitched to this snow plow. A board can be placed across the top edges and the man can stand on this while he drives his snow plow anywhere he desires over the place. This will make a good wide path for stock and will prevent young stock getting their legs covered with the ice and snow. The farmer, too, will not be compelled to get his feet and clothing wet wading around in the snow.

Straight Talk on Plows—No. 3

In our previous talks on Plows, we have explained that the most vital feature of any plow is its share. Also, we have told you of the discovery of the wonderful ACME Steel which is used in making our famous ACME Steel Shares and Moldboards. Now let us consider this subject a little further:

Let us suppose you are in a store selecting a razor or a knife—you are undecided which one of the two to buy. They are practically the same price—each has an attractive handle and highly polished blade, but one has a fine steel blade that you can re-sharpen—it will retain its original hardness as long as you use it—while the other has a blade which will not hold an edge after you have sharpened it the first time and soon becomes dull.

Which one would you buy—the one that will stand re-sharpening, of course. All new plows are attractively painted—they all have their foot lift, etc.—the shares are all bright and sharp when new—in fact, to the naked eye there are several plows that look very much alike. So then in selecting a plow remember the SHARE is the blade of the plow and that is what you should consider, just as you do when you buy a razor or a knife.

You should demand a Plow with a Share that can be successfully re-tempered every time it is sharpened. You should demand a Share that you can keep as hard as new and with a sharp, keen cutting edge all the time.

Acme Steel Shares

Numerous heavy blows can't break Acme Shares.

are the only Shares that can be successfully re-tempered after re-sharpening. They are the only Shares that can be kept as sharp and hard as new during their entire life.

They have the quality of steel in them that no other plow share has or can have, because they are made by our own patented secret process, in our own factory and they are used only on Plows manufacturered by the Moline Plow Co.

ACME Shares hold a hard, sharp, keen cutting edge. This means light draft—more acres per day and the best plowing you have ever done.

One light blow easily breaks other Shares.

More than 1,000,000 farmers will testify to this.

A gilt-edge Guarantee goes with every ACME Steel Share. It guarantees that you or your blacksmith will not break it in the field or in the fire.

Our Free Booklet is full of valuable information on Plow Shares and Plows. Write for it. OUR 1914 ALMANAC FREE. WRITE TODAY.

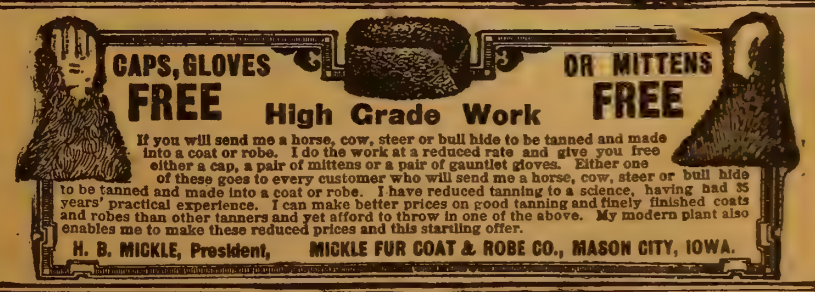
CAPS, GLOVES OR MITTENS FREE
High Grade Work



If you will send me a horse, cow, steer or bull hide to be tanned and made into a coat or robe. I do the work at a reduced rate and give you free either a cap, a pair of mittens or a pair of gauntlet gloves. Either one of these goes to every customer who will send me a horse, cow, steer or bull hide to be tanned and made into a coat or robe. I have reduced tanning to a science, having had 35 years' practical experience. I can make better prices on good tanning and finely finished coats and robes than other tanners and yet afford to throw in one of the above. My modern plant also enables me to make these reduced prices and this startling offer.

The Future of Stock Raising in South America.

LARGE possibilities exist for future extension of South American stock raising and meat industries, according to Dr. A. D. Melvin, chief of the bureau of animal industry, who has lately returned from a tour of investigation at the instance of the secretary of agriculture. The department of agriculture has given out a statement telling of Dr. Melvin's trip and his observations.

Dr. Melvin's trip included Argentina, Uruguay and Brazil. In Argentina he inspected all of the establishments preparing beef for export with the exception of one which was not in operation at the time, and visited several large ranches. He also attended the stock shows at Rosario and Palermo, where many fine animals were exhibited. In Uruguay he visited one of the two large establishments, the other not being in operation. In Brazil he visited Sao Paulo and Rio de Janeiro, where a fine municipal abattoir has recently been completed, at which all of the slaughtering for that city is done. From Sao Paulo he went into the interior country.

The cattle slaughtered for export in Argentina and Uruguay are largely exporters of beef and mutton, for which Great Britain is their principal customer. Brazil, however, exports no refrigerated beef, although it supplies Central America and Cuba with a considerable quantity of cured beef known as "tasajo" or "jerked beef."

While statistics show that Argentina is already slaughtering up to the limits of its present stock of cattle, Dr. Melvin was impressed with the great resources of the country for cattle raising and believes that it will be possible for the stock raisers to bring about a large increase in the meat output if present prices are maintained.

Argentina, Dr. Melvin says, are fed no grain whatever, but are raised and fattened entirely on alfalfa pastures. For the most part the cattle are high grade stock, the predominating breed being the Durham, with the Hereford ranking second and the Polled Angus third in number. The alfalfa pastures are capable of supporting many more cattle than are the native "camps" or unbroken country. In a general way the cattle raisers estimate on two and one-half acres of pasture per head for growing cattle, and three to three and one-half acres for fattening cattle. These pastures support the cattle the year round without any further feeding except in occasional times of drouth or invasion of locusts.

Alfalfa, he says, is not being grown nearly as extensively as it could be. The extension of its growth, he thinks, will depend very largely upon the prices that the cattle raisers receive for their cattle. Because of present satisfactory prices the tendency now is to convert the grain lands into alfalfa pastures. As cattle raising is a much more certain enterprise than grain growing, the people prefer to raise cattle when the prices are remunerative.

"At the time of my visit," says Dr. Melvin, "cattle that dressed 820 pounds were sold for $74.80 gold. This grade of Argentine beef, which is of very high quality, is selling in England for from 8 to 9 cents a pound wholesale. Besides the price received for the meat, there is a considerable return from the hide and the offal, and since the entrance of American packers into the South American trade, these by-products are being carefully prepared and utilized.

"A very high quality of mutton is also produced in the Argentine, but at the time of my visit shipments were scarce on account of the floods, which were quite prevalent in sections of the province of Buenos Aires and farther south.

"Argentina for many years has been importing the best breeding cattle and sheep from Great Britain and today has some of the finest types in the world. Uruguay has a good grade of live stock, but they are not equal to the cattle in the alfalfa region of Argentina."

Dr. Melvin reports that the federal governments of both Argentina and Uruguay maintain veterinary inspection at all of the establishments are known as "frigorificos." United States packing firms own four of the large plants in these two countries and the competition between them and the native firms is keen. English capital is also invested in several of the establishments.

Municipal abattoirs with official inspection are maintained very generally at all of the South American cities of any importance, and in this respect these countries are ahead of the United States. Usually these abattoirs are owned by the municipalities, which conduct the slaughtering and provide inspectors, charging fees for the service.

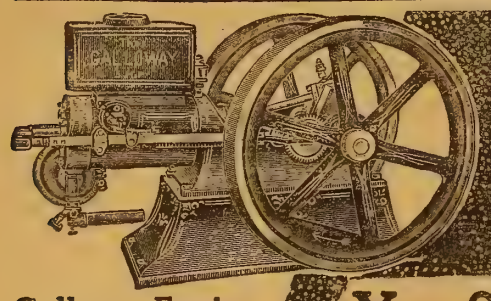
The cattle of Brazil, Dr. Melvin says, are not of such good quality as those of Argentina and Uruguay, and the stock is largely mixed with the zebu or east Indian cattle. This strain of blood is very readily seen in most of the Brazilian cattle.

IOWA SHROPSHIRE ASSOCIATION MEETS.

The annual meeting of the Iowa Shropshire Breeders' Association will be held at the Iowa Agricultural College on Tuesday, December 30th. An interesting program has been prepared and topics have been chosen that we believe will help every man who is interested in this great breed of sheep.

In this connection attention should be called to the fact that the winter short course begins the day preceding, viz., December 29th.

The judging of fat sheep will have the center of the stage on the day of this meeting, the program lasting from 9:00 o'clock in the morning until 4:00 o'clock in the afternoon.



Let Me Ship You My Famous 5 H.P. Galloway Stationary Engine—Only $99.50

Yes, Sir! Try it 30 Days on Your Own Farm at My Risk

Every Engine made in the Big Galloway Engine Factory is sold right direct to your farm on the most liberal free trial offer ever made. You don't take one cent of risk. I take every bit of the risk of my Engines pleasing you. My guarantee is printed in black and white and says:—"Satisfaction or your money back" and I'll pay all the freight charges in case my Engines fail to please you. Now, then, here is just the proposition in a nutshell. If my engines are as good as any Engines on the market, my terms more liberal than any other manufacturers', my guarantees stronger, then how can you afford not to give my Engines a trial on your farm and save a big sum of money in the first cost alone? Remember, I absolutely guarantee all my claims and warranties and give you a positive 30-Day Free Trial of my Engines right on your own place.

Five years ago when I astonished all competition by coming out and offering my Famous 5 H. P. Stationary Engine for sale at $119.50 dealers were asking from $225 to $300 for inferior engines of same capacity. I've made them come down some in their high prices, but they are a long way off still. They can't anywhere near meet my New, Low Engine Prices. Never! And I am giving you a better Engine than ever before. My 5 H. P. Engine Price is just a sample of my new low prices. All my other styles and sizes are selling at as low corresponding prices and on the same liberal terms. Investigate! Give me a chance to prove my claims. The way to do it is to send for my catalogs, which give all the facts. Get a copy today—it's FREE to you.

Galloway Engines will run on Kerosene, Gasoline, Naphtha, Distillate or Natural Gas.

Made in Sizes 1 3-4 to 15 H.P.

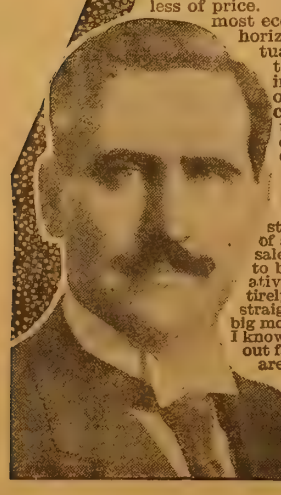
All Backed by Strong Five Year Guaranty on Materials.

My Direct-From-Factory Plan Saves You $50.00 to $300.00

Why not put the money I can save you on a Gasoline Engine right back in your own pocket? That comes about as near keeping your money at home as any way you can think of,—doesn't it? It certainly does, for when you buy on my Direct-From-Factory Plan you have no middlemen's profits, salesmen's expenses or dealers' bad debts to pay. No, sir, all you pay on my plan is just one small manufacturer's profit in addition to actual cost of materials and labor that enter into the construction of the machine.

My Engines are built especially for farm work. You won't find any better made Engines on the market for doing your work, regardless of price. They are the easiest to start, easiest to operate and most economical Engines built. Water-cooled, four cycle, horizontal type. And all proven by the "acid test" of actual use by over 35,000 users. If this isn't proof enough, then here is still more proof—the fact that we are selling more Galloway Engines today than ever before in our history. Isn't it a fact that the only article that can endure is the article of merit? It certainly is—and the fact that our Engine business is still going ahead every year by leaps and bounds proves my claim that Galloway Engines are high quality engines that give satisfaction. They will please you and I'll save you big money right at the start. You can get them in sizes from 1 3-4 to 15 H. P., either stationary or mounted on hand and horse portable trucks, or equipped with wood-sawing attachment. I can supply you also with a lot of the machines such as Grinders, Shellers, Washing Machines, Shredders, Pumps, etc., that you may want for running by power at money-saving prices. Write me. My Free Service Department—composed of Engine Experts is always at your command to assist you in selecting the best size Engine to buy for your requirements, in choosing right size pulleys, etc., or helping you to plan and equip your power house. This service is free. Absolutely. Write me for my catalog. I will send it, postage prepaid, and without obligation to you.

Take Your Choice of My Big Engine Line. Stationary, Portable, Wood Sawing Outfits or Complete Combination Outfits at Money-Saving Prices.



Get My FREE Engine Book and New Special Offer NOW

Get familiar with my money-saving, direct-from-factory plan of selling. Get my Engine Catalog. That's the first step, for my catalog is my only salesman and it costs less than one-third the price of a salesman's ten-cent cigar to put one in your mail box. The cheapest and best salesman on earth. Let me send you one today, postage prepaid. No obligation to buy. Then when you send for my catalog I will explain my new co-operative, profit-sharing offer that will help you get your Engine partly or entirely without cost to you in the end. No soliciting, no canvassing—just a straight business proposition. Remember, I absolutely agree to save you big money on any engine you buy of me. Isn't that fair? It certainly is and I know you are looking for just such an opportunity. Write me today without fail. Get my Engine Catalog or my New Pumping Engine Catalog—they are **free**. A postal will bring them. Send for them before you lay this paper down. Address

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

BUYING A BETTER RAM.

Most every agricultural lecturer on live stock topics tells the farmers who hear him that the male is half the flock. A German sheep breeder tested out this statement a few years ago and proved that with sheep at least the ram may be the making of the flock.

This shepherd purchased four ewes from a Wyoming range. At the time of the purchase, it was almost impossible to determine the breed of the sheep because they were so scrubby and so much run down. Nothing was known of their parentage, but it was very apparent from their appearance that they were the scrubbiest of the scrubby.

He mated these four ewes with a ram of very high character. He was unusually vigorous, a pure bred, and with breeding of the very highest quality. The first crop of lambs told the story. Seven were born to the four ewes and all of them resembled the ram. Of course, they were not pure breds, they were not perfect in all respects, but they were so far in advance of their mothers that you would scarcely recognize any relationship.

Not only were these lambs of high quality, according to the judgment of the shepherd, but they proved to be all he thought when he took one of them to the International Live Stock Exposition the following winter. In a class containing thirty-eight lambs of various breeding, one of these took second prize.

In selecting a ram of any mutton breeds, you naturally look for a well-built body. More important than this is the vigor. The ram should have a bright eye, a fearless expression, and a masculine appearance throughout. His body should be blocky, because it is the blocky body that produces the most meat. In fact, he should be the most near the ideal type of mutton sheep as it is possible to secure, with the addition of unusual vigor and constitution.

A ram with a narrow heart girth should not be used in a flock under any conditions. Narrowness just back of the fore legs indicates lack of constitution which is almost sure to have a downward tendency in the flock. Just remember that in the same way a good ram can bring up a flock, a poor ram will pull down the standard just as rapidly.

Because a ram lamb can be purchased more cheaply than an older animal, a great many men begin breeding too early. As a rule, good results are obtained from a yearling—that is, a ram a year and a half old, but the tabulation of the weights of all of the lambs born in a large flock showed that the lambs sired by the older rams averaged heavier at birth. Certain it is that it is not wise to use a ram under a year old.

If the flock is large, more than one ram should be kept. A good rule to follow is—provide a ram for each fifty ewes. If the ram is not unusually strong in constitution, however, even this number may prove to be too many. A ram that is overworked will not only be injured himself, but the last lambs will usually be found to be smaller than the rest and weaker in constitution.

WINTER QUARTERS FOR THE RAM.

There are not many farmers who would purchase a $2,000 automobile and let it stand out in the rain in a mudhole all winter, but there are many who pay a high price for a well-bred ram and treat him almost as badly as that.

How often it is that you go into a man's barn and finds in a dark, stuffy, narrow pen, way back in one corner, the head of the flock. The male of the herd, of course, should be kept by himself, but he needs sunshine, fresh air and a place to exercise just as much as the ewes.

The winter quarters of a ram should be such that he can keep dry, both overhead and under foot. At the same time, the more fresh air the better. Even an open shed will serve if it is entirely dry. A pen should certainly not be used that is less than fifteen feet square and if it is larger, so much the better. This will give the ram an opportunity to exercise and will keep him in good, vigorous condition.

During the summer months, when the ram is allowed to run on pasture, he does not need grain, but in the winter, if you expect to keep him in good, vigorous condition, he must be supplied with grain at least a month before the breeding season.

A mixture of two parts oats and one part bran has given unusually good results in some of the larger flocks of the West. This ration does not produce fat, but does keep up the vigor of the ram.

It is impossible to suggest the exact amount to be fed, for this can only be determined by watching the animal and studying his condition.

A CURE FOR PORK.

Before curing is begun, meat must be thoroughly cooled, but not frozen. If the animal heat is not out of it, the salt will cause shrinkage of the muscles. On the other hand, salt will not penetrate frozen meat, and uneven curing will result. The most suitable vessel for curing meat is a good clean barrel, tight enough to prevent leakage, though for small quantities a stone jar is good. According to A. M. Paterson, assistant in animal husbandry at the Kansas Agricultural College, dry-cured pork may be treated in this manner:

For 100 pounds of meat, thoroughly mix five pounds of salt, two pounds of granulated sugar, and two ounces of salt peter. Every three days the meat should be rubbed with one-third of this mixture, and after the last rubbing, it is left in the barrel for a week or ten days. Then it is ready to be smoked. This recipe should be used only when there is a cool and moist place in which to keep meat. If a warm or dry place is used, the preservatives do not penetrate evenly. For plain salt pork, every piece of meat is rubbed with salt, packed closely in a barrel, and allowed to stand over night. For every 100 pounds of pork, a brine is made consisting of ten pounds of salt and two pounds of salt peter dissolved in four gallons of boiling water. When the brine is cold it is poured over the meat, which is then covered and weighted down to keep it under the solution.

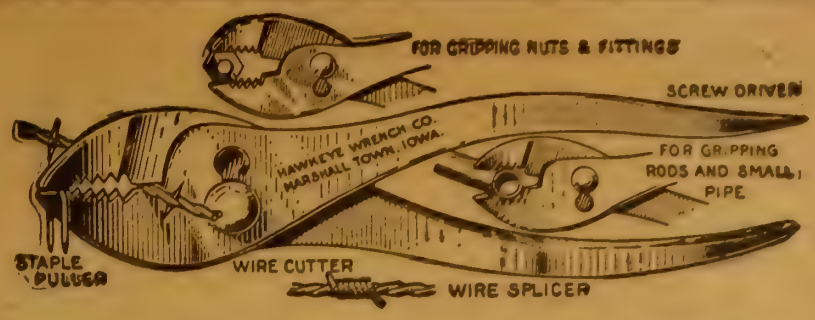
To prepare sugar-cured meat, rub every piece with dry salt and allow it to drain over night. Pack it in a barrel, and for every 100 pounds of meat add a brine of eight pounds of salt, two pounds of brown sugar, and two ounces of salt peter dissolved in four gallons of hot water. In summer, the brine must be boiled, but this is not necessary in winter. Let the brine cool before using. Bacon strips should be left in the solution from four to six weeks, and hams from six to eight weeks.

Sausage should be made of clean, fresh pork. To every three pounds of lean meat add one pound of fat, and mix them together by chopping. When this is done, spread the meat out thinly and season with a mixture of one ounce of fine salt, one-half ounce of ground black pepper, and one-half ounce of pure leaf sage, rubbed fine, for every four pounds of meat. The seasoning should be sprinkled over the meat and the two mixed together by running them through a food chopper. The sausage may then be packed in jars or casings.

If large quantities of meat are to be smoked, a permanent smokehouse is necessary, but for small quantities a large dry goods box serves the purpose. A smokehouse should be eight or ten feet high and should have plenty of ventilation, so that the warm air may be carried off and the meat prevented from overheating. It is best to have the fire pot outside, with a flue to conduct the smoke into the meat chamber, but if this cannot be arranged, the fire is built on the floor of the house and the meat shielded in some way. The construction should allow the smoke to pass freely over the meat and out, though too rapid a circulation is a waste of fuel. The best fuel for smoking meat is green maple or hickory smothered with sawdust. Hard wood is always preferable to soft, and resinous wood should never be used, for it will give meat a bad flavor. Corncobs are the best substitute for hard wood.

Meat to be smoked is removed from the brine two or three days before it is put into the smokehouse. Two pieces should not be allowed to hang in contact, as this prevents uniform smoking. After smoking has started, fire should be kept as constant as possible, for it there is any great variation in temperature, the smoke does not penetrate evenly, the outer portions being heavily smoked and the inner portions lightly. At all times the house should be kept dark to prevent flies and other insects from entering.—[The Kansas Industrialist.

Bobolink! The very words calls up a vision of daisies in the hayfields and white cumuli piled Ossa on Pelion. The bird is our skylark, the blithest bird in America, says South Dakota Kirkham. His song is audible sunshine; a perfect expression of pure joy, such as fauns and satyrs, rather than reflective beings, might experience. No human being—no other bird, perhaps—could feel or express a joy so spontaneous, unreflective, unalloyed, as this bubbling song of the fields seems to imply. When I listen it is to feel that the bird is ten thousand years younger than I; to realize that he is of the immortals and can never grow old, nor change, nor add a single note of age to that song of eternal youth.



This Pair of Pliers FREE

These combination fence pliers are 6 1-2 inches long, dropped forged from the best open hearth steel, case hardened, nickel plated, light and compact, but strong and durable. With them you can cut and splice wire, pull staples, grip rods, nuts and small pipes. They also have a screw driver attachment and make a handy household device. There are hundreds of uses for this little tool. It is light and easily carried in the pocket.

Special 20-Day Offer

We will send a pair of these combination fence pliers free and postpaid to all who send $1 to pay for a one year new, renewal or extension subscription to The Iowa Homestead.

We guarantee these combination pliers to please you in every way. We will refund your money at any time if they are not perfectly satisfactory.

NEWS OF THE SALE RING

The Saunders Sale.

What was unquestionably the largest crowd seen at South Omaha since the Westrope dispersion a number of years ago attended the E. A. Saunders sale on December 16th and fifty-eight head were disposed of at an average of $150.86. The demand for bulls was quite strong and thirty-six head made an average of $175.41. The top of the sale was the white bull, True Cumberland 2d, sold by Charlie Mitchell, of Farragut, Iowa, and he went to Frank Toyne at $525 and he was a splendid bargain at that figure. His son, A Cumberland 385024, went to the Ashcroft Bros. at $400. The Saunders bull, Sultan's Count, went to D. J. Wenck at the same figure. A few of the very thin cattle sold low, but they sold for all they were worth, but as a rule the better things brought fair values. Col. F. M. Woods cried the sale, assisted by Col. Kraschel. Below we list those selling for $100 and above:

BULLS.

Sultan's Count 372507, calved March 1912; D. J. Wenck, Glidden, Iowa.. 400
Gloster M. 333425, calved Dec. 1908; John Ingalls, Shelby, Neb..... 155

58 head .... 8,755; average.... 150.86

The Judge Short-horn Sale.

An unusually large crowd of breeders and farmers attended the sale of J. T. Judge, Carroll, Iowa, on December 17th, and he made an average of $226.49 on forty-seven head. His offering was high in quality, well filled, and well bred, and those who attented the sale showed their appreciation by bidding very liberally. The get of Sultan Standard, his chief stock bull, was sought after by the best breeders, and the prices paid for his young bulls and heifers in the sale was the best evidence that he is breeding to suit the most critical. Few sales this year have led cataloged a better string of young bulls than went through the Judge sale ring. The top of the sale was Sultan's Diamond, and he went to J. U. Cobb at $465. Sultan's March, an outstanding young white bull was purchased by Cahill Bros. for an even $400 and Sultan's Count. Another white bull calf just a year old went to W. H. Griffith at $415. He was one of the best things in the entire offering, and both of these white bulls were sons of Sultan Standard. Eight Sultan Standard bulls in the sale made an average of $283.75. It was the best sale Mr. Judge has ever made and he was well pleased with the outcome. Col. Woods cried the sale, assisted in the ring by Cols. McGuire and Foley. We herewith report the entire sale offering:

BULLS.

Sultan Diamond, calved Jan. 1912; J. U. Cobb, Correctionville, Ia....$465
Sultan's March, calved May 1912; Cahill Bros., Rockford, Ia..... 400
King Major, calved May 1912; Ed Huffman, Ida Grove, Ia..... 325
Walnut Victor, calved Nov. 1912; H. Smith & Son, Tobias, Neb..... 310
Standard's Court, calved Dec. 1912; W. W. Griffith, Lanesboro, Ia.... 415

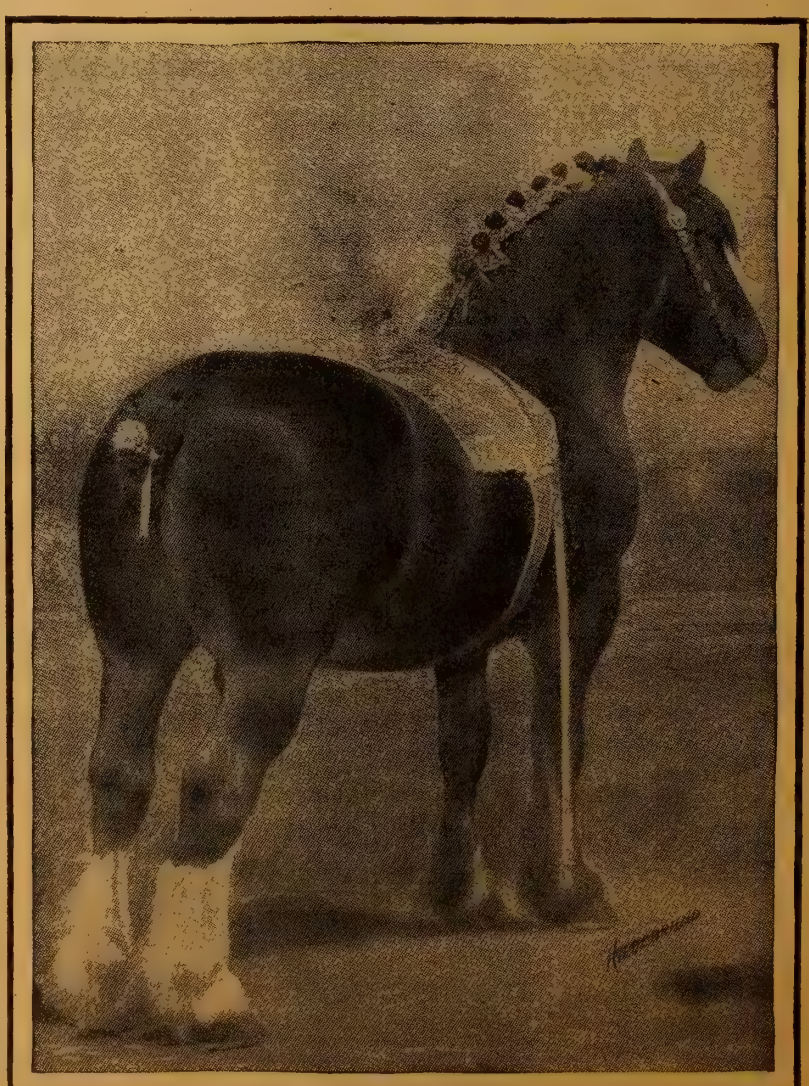
Marshal's Nonpareil, calved Jan. 1909; John Rasmess, Lake City, Iowa 265



The International grand champion Shire stallion, Lockinge Hengist, portrayed above, was sold last week by Trumans' Pioneer Stud Farm, Bushnell, Ill., to George J. Stoll & Co., Chestnut, Ill., for $11,500, the record price for a draft stallion. The horse goes into one of the best sections of Illinois and into the hands of men who are progressive farmers and horse breeders and who maintain a large stud of registered Shire mares.

If you find 12 gauge guns and loads too heavy and a bit slow in an all-day hunt, just get this splendid new

Marlin

The Safest Breech-Loading Gun Built.

DITTO IMPROVED POWER FEED GRINDER

This new grinder is especially designed to run with a gasoline Engine. Try it—no money down. I trust you—I keep it if satisfied, if not, return it at my expense. I take all the risk.

AN HONEST MILL, SOLD IN AN HONEST WAY

Grinds ear corn, wet or dry, shell corn, Kaffir corn or any kind of small grain. Also make the celebrated Ditto Sweep Grinder. Write for FREE catalogue.

G. M. DITTO, Box 201, Joliet, Illinois

5 H. P. GASOLINE ENGINE $89.50

Simple, durable, powerful. Carefully made to give satisfaction. 34 sizes and kinds. Shipped anywhere on trial. Fully guaranteed. Send for Big 48 page Catalog. It will help you to buy a better engine for less money.

OTTAWA MANUFACTURING CO., 511 King St., Ottawa, Kansas.

Browning's Duroc Sale.

A large crowd of breeders attended the holiday sale of H. E. Browning, Hersman, Ill., held at his "Idlewild Farm," December 18th. The sale was successful as the average indicates, but the show sows sold for less than their real worth. No. 3, High Private topped the sale going to head the herd of J. J. Baker, Independence, Kan. No. 18, Tattletale 39th, topped the sows, selling to J. Young Caldwell, of Illinois. M. E. Merfeld, Greene, Iowa, was a good bidder and buyer of the best that was sold. He secured No. 6, a boar pig by Volunteer at $202.50, No. 13, a great junior yearling show sow at $237.50 and Defender's Jewell, a great daughter of Defender out of Proud Jewel by B. & C.'s Col., second dam Chief's Jewel, an Iowa champion sow by Ohio Chief, at $215. R. G. McDuff, Monroe, Iowa, secured Helen Blazes 53d at $80, Lucy A. at $177.50 and Lady Volunteer at $72.50. R. H. De Vault, Bloomfield, Iowa, bought four head including a good spring boar by Disturber and out of a Tippy Col. dam at $145. Colonels Reppert, Igleheart, McGowan and Irwin sold the offering. A list of the sales is appended:

2. J. L. Fisher, Janesville, Wis..$150.00
3. J. J. Baker, Independence, Kan. 332.50
4. R. H. De Vault, Bloomfield, Ia. 145.00
5. Zimpleman Bros., Grass Creek, Ind. 70.00

Business Methods for the Farm.

COMMON-SENSE business methods are as essential to the success of the merchant or manufacturer. No merchant could remain in business if he failed to supply the goods wanted by his customers; no manufacturer could exist if he made an article that did not pay for the expense of producing it, or if he left all his machinery in the yard around the shop to rust, yet some farmers expect to make a living by raising the same crops year after year, without trying to restore the slowly-diminishing stock of fertility. Still others expect to get a living by keeping an inferior grade of livestock that will not pay for their feed, and by leaving their implements out in the snow all winter. Comparatively speaking, a farm is like a violin, in that if it has received proper care, it becomes more productive and more valuable as it grows. We should treat our farm the same way we treat our bank; if we issue checks continuously against our account without making a deposit, our funds will soon be exhausted. If we raise crops continuously on our land without restoring the necessary plant food, the ability to raise a crop will soon be exhausted.

One of the great questions before the American farmer today is, "How can I maintain the fertility of my farm?" This is usually a local problem, but the general features are the same everywhere, and the farmer of today is learning to profit by the experience of others, as well as by his own experience. He is not using his hands less, but his head more, and by studying the underlying principles of successful farming he is raising in short rotation those crops which are best adapted to feeding livestock, and at the same time restore the necessary richness to the soil.

The greatest soil restorative is clover. It has been shown by experts that a ton of clover contains forty pounds of nitrogen and a ton of manure contains ten pounds; thus the business farmer of today finds it much more profitable to feed out his crops than to sell them for cash, as it makes the farm self-sustaining.

A careful man will use only the best seed that is adapted to his locality, for if care is taken in selecting clean seed and proper care is given same, much labor and loss by foul weeds and weak vitality will be prevented.

Good seed is a necessity, but no seed can give satisfactory results unless it receives good cultivation. Some farmers appear to be making a profit by using slip-shod easy-going methods, but the result is not due to any ability on their part.

To get the soil well cultivated, one must have the most efficient implements and know how to use them. It is one thing for a man to own many implements and another thing to know how to care for them. One can give a machine agent a roll of money for a binder or mower, but it is the man who is able to figure things out that knows a binder will depreciate more in value while standing in a snow bank all winter than it would from several seasons' wear in the harvest field. If those, from this state, were to go to Racine and should see the J. I. Case Threshing Machine Co. leaving all their machinery outside and their men working out in the open air, they would conclude the heads of that concern had lost their reason. It is just as reasonable and sane for the Case Threshing Machine Company to leave their machinery outside, as it is for the farmer to leave his binder, mower, rakes, plows and disc harrow behind his barn somewhere.

The man who is always planning ahead, will never leave the repairing of a machine until he needs the implement, but will send for it long before, so no delay will be necessary. An excellent time to look after repairs is on rainy days, when you are unable to work outside, for time is valuable when a crop is ripe and waiting to be harvested, so valuable, in fact, you cannot afford to spend it waiting for repairs.

The care and use of implements and the rotation and growing of crops are but two of the ways in which a farmer must use his ability. In truth, no detail requires as much thought or intelligence as livestock raising.

The subject of livestock raising is becoming more important each year, not only to the farmer who markets his fat stock, but also to the dairyman. It is a mistake to assume that dairying is in any way antagonistic to other classes of stock raising, because all branches run parallel. Good horses are in demand in both city and country and will be for many years to come, while the great mass of people in our cities are constantly demanding good beef, mutton and pork to such an extent that those who raise these classes of stock receive large returns; however, I have observed in passing over this state that at this day and age of expensive feeds and high-priced lands, many farmers do not pay enough attention to the breeding of good stock.

To make livestock raising a paying business, we must turn our efforts to producing some definite type of animal that is bred and adapted for a special purpose in view, and not to be contented with raising some poor, nondescript, criss-cross bred scrub.

Some farmers who own stock do not care for them properly. They force them to rough it through the winter by letting them pick their living from a straw pile, and stand under some open shed through a cold winter night. This kind of a businesslike man is usually denouncing the use of high-grade breeding stock and is always able to tell how much more his neighbor, who owns some inferior-bred stock, is making than he is, entirely forgetting that feeding and care are one-half and breed quality the other. The person who fails to combine these necessary qualities does not have a good paying business.

The business man on the farm realizes that with the increase in prices of feed and grain, his liabilities are increased and to make his position pay he must increase his resources. This he does by building a silo, which he uses as a vault for storing away his crop of golden corn. But storing corn in a silo is unlike the storing away of money, the corn crop will increase 40 per cent in feeding value by the time it is fed out as compared with the old method.

The good manager will never allow his stables to become dirty, for a clean, well-lighted and properly-ventilated barn not only means healthier stock, but also a good reputation. Therefore, every man who wishes to make a success of farming should apply every bit of business ability he has, his aspiration, inspiration and a reasonable amount of perspiration, for there is no occupation that requires more capabilities than is required of the farmer of today. He must be a manager, superintendent, cashier, clerk, mechanic and general workman. To fill each of these offices, he must have the managing ability of the manufacturer, combined with the care and shrewdness of the merchant.

The man who never cares whether his land is in good fertile condition, or his implements are housed, is usually the one who owns the scrub stock and keeps them in a dark, dirty unventilated barn. He is always complaining about the hard life of a farmer; it is he who spends his spare time at the corner grocer's store, exchanging tales of woe; who blames the weather as his crops yield less and less each succeeding year; the administration of government when prices are low, his failures to so-called "bad luck" and he is never able to do anything because he thinks he cannot afford it.

Now, the farmer who plans his work in a businesslike manner is the one who prospers, whose farm is increasing in value and who owns the fine, well-bred stock. He would not exchange his farm and business for any city position, for he knows there is no place where he can get as much real enjoyment in life and as large returns for his labor and capital invested. It is he who is directly helping to elevate this great profession of ours to a higher plane, also greatly in the estimation and respect of all other classes, and go to uplift country life toward that high standard where our Creator intended it should be, toward better things that enrich the mind and soul.—[R. E. Roberts in Wisconsin Farmers' Institute Annual.

KANSAS CHILDREN LEAVE FARM.

Kansas has not been following the preaching of the "back to the farm" movement. In the last five years the rural school population has decreased 13,881 and in the same period the city school population has increased a little over 16,000.

W. D. Ross, state superintendent of public instruction, has just completed the tabulation of the school population of the state. It is divided into the rural schools, two-teacher and third-class city schools, second-class cities and first-class cities. The rural schools have shown a steady decrease ever since the figures have been segregated, while the two-teacher, first and third-class cities have been showing about equal increases.

The general census figures show an increase in the total city population of the state for the last ten years and a small decrease in the rural population.

THREE BIG PAPERS $1.25.

The Iowa Homestead, Twice-a-Week Republic of St. Louis, the biggest and best semi-weekly in the Southwest, and Farm Progress, a big semi-monthly farm paper, sent a full year for $1.25. Send orders to St. Louis Republic, St. Louis.—Adv.

Clean Water at Right Temperature In Cold Weather Means Healthy Hogs

Hogs won't drink as much as they should if given cold water. When they are forced to drink it they shiver away the fat you have built with costly feed. Their whole system is chilled. They will be healthier and put on more weight with less feed if given water with the chill off. Give them a constant supply of good water.

Ideal Hog Waterer *Will Not Freeze in Coldest Weather*

Keeps water at just right temperature even on below-zero days. Water ready night and day. Heavy galvanized steel tank. Protected trough clean and sanitary. Simple. Practical. Inexpensive to operate. Automatic feed. Write for free literature.

LANDS AND HOMES

Land Opportunity

is for the man who carefully investigates before he buys. There are many large and small tracts of good land along the Union Pacific System Lines. Your land opportunity is among them. I will give you free authentic information concerning any of these tracts if you will write to me. It will pay you to investigate before you move.

R. A. SMITH,

Colonization and Industrial Agent, Union Pacific Railroad Co., Room 1189, Union Pacific Building.

OMAHA, NEBRASKA.

35 BUSHELS PER ACRE was the yield of WHEAT

160 ACRE FARMS IN WESTERN CANADA FREE

on many farms in Western Canada in 1913, some yields being reported as high as 50 bushels per acre. As high as 100 bushels were recorded in some districts for oats, 50 bushels for barley and from 10 to 20 bushels for flax. J. Keys arrived in the country 5 years ago from Denmark, with very little means. He homesteaded, worked hard, is now the owner of 320 acres of land, in 1913 had a crop of 200 acres, which will realize him about $4,000. His wheat weighed 68 lbs. to the bushel and averaged over 35 bushels to the acre.

Thousands of similar instances might be related of the homesteaders in Manitoba, Saskatchewan and Alberta.

The crop of 1913 was an abundant one everywhere in Western Canada.

Ask for descriptive literature and reduced railway rates. Apply to Supt. of Immigration, Ottawa, Canada, or Canadian Gov't Agent.

SHANKS' great Duroc sale.—One of the greatest offerings of Duroc Jersey brood sows that has ever been listed for a sale in the Northwest will be sold by W. N. Shanks, Worthington, Minn., on January 14th. It is an offering of forty head that might be termed "queens of the breed," and it furnishes a variety of breeding that is seldom seen in one sale. Not only is he selling a high-class lot of sows, but they are bred to an exceptional lot of boars. Twenty-five head in the sale will be bred to the champion boar, High Model, regarded today as one of the greatest Duroc Jersey boars now living. This is the hog that was shown so successfully by the Waltemeyer Bros., in 1912 and 1913 and Mr. Shanks purchased him in their fall sale at a figure that was right close to the $1,000 mark. He was first and champion at Iowa and South Dakota fairs in 1912, and first in class at Minnesota and the International fairs the same year. Last fall he was first-prize aged boar at the Iowa and Nebraska State Fairs, and he was an awful hard hog to beat for championship honors at these same fairs. There are many things about this boar that make him one of the foremost of the breed today. In the first place he is bred right, being a son of that noted grand champion boar, Golden Model II., and out of an Ohio Chief dam. Then again he is a hog of great size and depth, with plenty of bone, and this is what they are all after today. When you get a boar with all of these qualities, and with his great reputation as a show winner, then you will most certainly want to buy a sow that is bred to him. In this offering you will find some of the best sows you have ever seen sell in a public sale bred to this boar, and if you are a breeder who is striving to get at the top you cannot well afford to miss getting one of them. Among the good sows he will sell is Crimson Rose Again, a daughter of the celebrated champion and sire of champions, Crimson Wonder Again, and we think she is one of the greatest daughters of this great boar that we have ever seen. She goes in bred to High Model, and she herself is a show sow of unquestioned merit. She will be one of the outstanding sows of the year, so go to the sale and see her sell. He sells two other good sows that are both daughters of Crimson Wonder Again, and both of these are bred to High Model. He is also selling R. J.'s Medium, a daughter of Chief's Protection, and she is the best sow that R. J. Harding sold last winter. She is also bred to High Model. Another good one is Golden Model Queen II., a daughter of Golden Model II., and her dam is Model Queen 2d, champion sow at Sioux City in 1911. This sow is bred to his good young boar, Gano, that in turn is a son of the noted boar, Col. Gano, and out of the Harding sow just mentioned above. Model Chief's Lady is a daughter of old Model Chief and out of an Advancer dam. She has been one of his very best brood sows and she will be bred to High Chief for an early litter. Three fall sows sired by his former well-known show and breeding boar, Model Chief II., are among the very best and most desirable sows he will sell in this sale. The dam of these sows is Red Maid, tracing back to old Dale, the Minnesota champion boar a number of years ago. These three sows are simply of the outstanding kind and we want you to take particular notice of them when you go to the sale. He is also selling three very choice King the Col. gilts and two choice gilts by Missouri Model Top and all of these are bred to High Col. He is also selling ten choice gilts by Chief's Model Jr., an Iowa State Fair winner last year and these are all bred to Gano. From what he have told you about this offering you can very readily see he will sell a great offering of brood sows and it will pay you to attend his sale or be represented with a bid. Write Mr. Shanks for a copy of his catalog at once and kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Shanks will be attended to on day of sale. See advertisement on page 28.

CHESTER WHITE swine, or as they are known, O. I. C. hogs have been deservedly popular for many years, probably as long as any of the improved breeds of hogs today of American origin, and of recent years many new men have become supporters of this breed. There are many good herds in Nebraska, probably as many in proportion to the number of swine raised as in any other state, and among these good herds we wish to mention the one owned by Chas. H. Murray, Friend, Neb. Mr. Murray has been in the pure-bred swine business for several years and is a good stockman and has supplied good stock to hundreds of readers of The Homestead. Right now we wish to mention that Mr. Murray is making some especially attractive prices on fall pigs, also some spring and summer boars as well as bred sows of almost any age. Mr. Murray's herd is clean from any disease, and he keeps it that may by the simultaneous method of vaccinating. By not allowing any disease to get a foothold, his herd is kept up to a high standard. The herd boars in use are U. S., Fairmont Chief and a couple of newer additions. The most of the stock is sired by the two boars named. Mr. Murray is a good man to do business with and will give his personal attention to all correspondence as to the selection and shipping of stock purchased. Write at once for further particulars and mention The Homestead.

DAVIDSON'S annual public sale of Duroc Jersey sows will be held at Algona, Iowa, January 10th, as per announcement on page 29. Mr. Davidson is one of the old-timers and one of those who insist upon breeding quality rather than over-fitness in the herd as well as in the show rings. He is not putting forward a big offering this year, but he is presenting a bunch of good sows that carry a greater percentage of the blood of Crimson Wonder I Am than can ever be gotten together at any other time or in any other hands. Of course everybody knows that Crimson Wonder I Am has been the source from which have come a greater number of champions in the show rings of several past years than can be credited to any other sire. Five mature sows, daughters of this old hog, will be included in this sale. These are I Am A Crimson Wonder, Peerless Block 6th, Fancy Wonder, Doubly Worthless Wonder and one other. There will be fourteen yearlings by Golden Model Jr., and from Crimson Wonder I Am dams. Spring gilts will be by the same sire. These sows will have been bred to Golden Model Jr. and Crimson Wonder Am I. Golden Model Jr. is by Golden Model and a half brother to the noted Golden Model 2d. He has been a wonderful producer and his pigs show excellent proportions and very neat heads and ears. Crimson Wonder Am I carries 87½ per cent of the blood of Crimson Wonder I Am and is very close to the old Crimson Wonder foundation. For catalogs write to U. G. Davidson, Algona, Iowa. Those who are unable to attend may send bids to C. C. Carlin, of The Homestead.

THE annual sale of all breeds of draft horses at Bloomington, Ill., Jan. 27, 28, 29 and 30th. These sales have been established fixtures for the past decade and the buying public has come to recognize them as the place where plenty of horses for all classes of buyers are to be found. For the coming sale Manager Hurt states that one of the best lots of animals yet offered at Bloomington will be offered. As usual the Percherons will largely predominate as to numbers, but there will be plenty of Belgian Shires and Clydesdale horses, so that admirers of all the breeds will find something to meet their wants. The closing day will be given over to ponies, standard bred and general purpose horses. The catalogs will be sent to any address upon application to the manager, C. W. Hurt, Arrowsmith, Ill., as per the advertisement on page 38

MAMMOTH jacks and jennets will be sold by G. C. Roan, La Plata, Mo., on March 9, 1914, at his Clover Leaf Valley Jack Farm, La Plata, Mo. Mr. Roan writes that he has purchased the entire number L. M. Monsees & Sons had expected to sell and these will be included in his sale. In future announcements we will tell of the offering. Catalogs will be ready February 1st. If interested write Mr. Roan now to put your name on his mailing list and kindly mention this paper when doing so.

DE YOUNGS' Duroc sow sale.—It is with pleasure we call attention to the Duroc Jersey brood sow sale of A. J. & L. L. De Young, at Sheldon, Iowa, on January 13th, when they will sell fifty-eight head of well-bred and useful sows and gilts. This offering is the pick of these two good herds and they are selecting some of the very best they have for this sale. There will be ten tried sows, ten fall yearlings and thirty-eight head of spring gilts. They will be bred to Cherry Wonder, a son of the old champion boar Crimson Wonder Again; Crimson King, a son of Crimson Sol, and Crimson Perfection, a descendant of old Crimson Wonder I Am. The gilts in their offering will be sired by Big Bone Climax, Crimson Sol, King of Cols. Again and Model Chief I Am. The fall sows will be sired by Crimson Advance. Among the good tried sows they are selling is Our Choice, a full sister to the first-prize sow at the Sioux City Fair last fall. This is a very choice sow herself and has been one of their best brood sows. She is bred to Model Chief I am, and she is a right good proposition to buy. Princess Arcadia is a two-year-old sow and is a daughter of De Young's Indicator. Here is one of the very best sows in their herd and she goes in bred to Model Chief I Am. Crimson Lass, a spring yearling sired by Crimson Advance is one of the few sows they are selling bred to Big Bone Climax and she is a very smooth sow. Sheldon Essie is a daughter of De Young's Col., he by King of Cols. Again and she is bred to Model Chief I Am. Golden Huffie is a March yearling out of a dam by old Achiever and she is bred to the Cherry Wonder boar. Fancy Muncie, another March yearling, is a daughter of Muncie King by Muncie Chief and she is the dam of the litter that brought $300 in their last sale and that was her first litter. She is bred to King-of Cols. Again, and you can take it that this sow will be a good one to put into a herd. Model Beauty is a daughter of the show boar, Golden Model 11th and she is out of a dam by King the Col., so you will see she is one of the best bred sows in the sale. She is bred to the Cherry Wonder boar. Another good sow we want to call attention to is Sheldon Belle, a daughter of King of Col. Again. Her dam is Improver Belle by Young Improver by Frankfort K. She is one of the largest and one of the best brood sows in the sale. Altogether these boys are selling a splendid lot of sows. Write for their catalog at once and kindly mention The Homestead. See advertisement on page 36.

GOOD sales are reported by Taylor and Jones, Williamsville, Ill., who state that buyers in looking for good horses are daily visitors at their place. Among their recent sales was one of two exceptionally good stallions to E. J. Weigel, Kingsville, Ont. Other buyers were George Ross and P. J. Teffer, both of Sangamon county, Illinois, and Samuel T. Perry, of Rock Island, Ill., each of whom bought a good Percheron horse. They write: "Anyone wanting a Percheron Belgian or Shire can find some of the best bargains in our barns that have ever been offered. We have weight, quality and high finish in all three breeds, and anyone looking for their money's worth with a guarantee backed by responsibility will find our horses to fit all conditions. See advertisement on page 33.

THIS week we are calling attention for the last time to the sale of Short-horn cattle that will be made by O. E. Wade, Rising City, Neb., the sale to be held in the sale pavilion in Columbus, Neb., on December 30th. In many respects this is one of the important sales of the season for central Nebraska. In point of individual merit, there has been no offering sold this season that surpasses them. As to pedigree, there are some that are pure Scotch and a number that are of so-called pure Scotch breeding and the remainder are cattle of really excellent pedigree, coming as they do from a long line of truly great ancestors, which after all should constitute the really good pedigree. There is a roan bull, a most excellent individual and of the Cruickshank Eliza family, that goes in this sale. He is a little past two years. He is sired by Roan Goods a son of Best of Goods. He carries the blood of the very best Scotch bulls and is a sure breeder of the very best type of stock. There are a number of extra choice, sappy young bulls that are sired by Rosebud's Star. They constitute one of the best bunches of bulls that we have seen in a long time. They are really a valuable lot and should be taken by those looking for really good thick-fleshed stock. We know of no better. The cows include a long list of extra select ones among them the great Scotch cow, Golden Queen 2d, got by Nonpareil Victor, and tracing to Imp. Princess Alice by Field Marshal. This is a most excellent cow and has a young bull calf at foot, a fine one sired by Roan Goods 2d. Golden Queen 4th and Golden Queen 5th are both Scotch cows and extra good ones. We cannot mention all the other good cows in this sale, but we want to say that for big roomy cows, that show in every line that they are producers, and good milkers, right in the prime of life, we know of no better place to make investments. Arrange to attend this sale, or send buying orders to J. C. Price, representing The Homestead at this sale.

WORD just received from Lee Bros., Harveyville, Kan., whose sale of Percheron horses will take place in the new sale pavilion at the agricultural college, Manhattan, Kan., Tuesday, January 27th, announces that the sale catalog is now in the hands of the printer and will be ready for distribution soon. This sale will be of unusual interest from the fact that the entire show herd owned by these breeders will be sold in this sale with the exception of the herd stallion, Scipion 27123 (43667), and the American Royal champion mare. This mare was sold and shipped to Honolulu immediately following this show. Our readers are familiar with the show record made by this herd during the past season. The mare offering in the sale will include ten two-year-old fillies, eight three-year-old fillies and four aged mares, all bred to Scipion, also one under-year filly and three yearling fillies. The stallions will consist of two aged horses, one three year old, four two year olds weighing over four tons, four yearlings that will weigh from 1,400 to 1,700 pounds on sale day and two of the herd's very best weanlings. Every horse that will be listed in the catalog is sound with the exception of one wire-cut filly. The roan two-year-old stallion and gray two year old that attracted so much favorable attention during the shows will go into this sale weighing over 2,100 pounds each. Watch these columns for further announcements and send in your name and catalog will be sent you when ready. Kindly mention this paper when writing.

DRAFT horses of all the breeds, both imported and American bred will be offered at public sale at Streator, Ill., Feb. 3, 4 and 5th, under the management of the Breeders' Sale Company, an organization recently formed by a number of prominent and reliable horse men in that section of Illinois. They have more than enough entries now to assure them a very successful sale. Their list will not close until January 2d, and any of the readers of our papers looking for an outlet for surplus stock of horses will find this sale a good opportunity, while buyers should bear in mind the fact that a very large number of desirable horses will be presented for appraisal at whatever price the buyer may see fit to place upon him. Streator is very nicely situated as a sales center being located on five different lines of steam roads and one interurban railroad. The sale will be held in commodius quarters right in the heart of the city with ample accommodations to take care of the crowd in a satisfactory manner. Further particulars will be given in later issues of this paper. Any desired information can be secured by addressing the secretary, Mr. T. F. Kennedy, Streator, Ill., as per the advertisement on page 32.

PERCHERON horses and Short-horn cattle have long been the favorites of American stockmen and no place have they found greater favor than among those of the middle states. Events of more than ordinary importance arise in rapid procession, but none should overshadow the sale of some thirty Percherons and about fifty Short-horns that will be made by Dan Cahill, St. Edward, Neb., on February 19th. Mr. Cahill has ordered this date taken for his sale and further notices of the same will appear in The Homestead in due time. Should you write him concerning this stock, mention The Homestead.

A REMARKABLE event in dairy cattle circles is the completion of the second greatest junior three-year-old Hol-

Field Men for The Iowa Homestead

ADVERTISERS always like to know the source from which their inquiries come. It will therefore be of mutual advantage to the advertisers and to the publisher of this paper if those who answer advertisements will kindly say, when writing, that the advertisements were seen in The Iowa Homestead.

stein record in the world by Buffalo Aaggie Beets, a heifer bred and raised on the Chicago Stock Farm. Writing with reference to this record, R. B. Young, proprietor of the Chicago Stock Farm, says: "Buffalo Aaggie Beets started the year test at the age of three years three months and three days and in 365 consecutive days made a record of 932.44 pounds of butter from 22,485.7 pounds of milk. In butter she was only excelled by the heifer Dutchland Changling Colantha Lad, that made 945 pounds of butter in her year, and in milk she was only excelled by the heifer, Dutchland Colantha Mona, that made 22,645.6 pounds of milk in her year. Buffalo Aaggie Beets should have made a larger record, but negligence of the herdsman, who caused milkers to be changed on her many times, caused this record to be less than it might have been. However, I am proud of this heifer and of the work she has done, proud to have bred and raised her and proud to have developed her and to own her. I also own the dam and grandam of this heifer. The dam is Aaggie Johanna Rue, that as a four year old made 945 pounds of butter from 20,343 pounds of milk in one year. This cow was born on the farm, developed and tested by me. They are both large and well developed and choice animals in every way. I have a large number of females of this family and they are uniformly great producers. I consider the family one of the most desirable of the breed because of their rugged constitution and great digestive ability and capacity, fine udders in both quality and shape and, last but not least, their indomitable persistence at the milk pail. The heifer, Buffalo Aaggie Beets, finished this wonderful record in fully as high flesh as when she freshened. Her record has again demonstrated that truth so forcibly driven home by Banostine Belle De Kol, the famous world's record cow that made 1,322 pounds of butter in her year, that persistency and not a great flush at freshening, is what makes great cows. I also wish to state that, barring accidents, this is not the last great record expected from Buffalo Aaggie Beets." See advertisement on page 20 and for particulars or prices write to R. B. Young, Buffalo Center, Ia.

SHIRE horses of the best breeding and outstanding individual merit will be offered at public sale at Bushnell, Ill., Thursday, January 15th. These horses are the propetry of C. C. & R. W. E. Williams and the F. M. Williams estate, and the sale is made necessary in order to settle up the affairs of the estate. Under other conditions the horses would not be offered at any price. Thirty-two head are listed, consisting of seven stallions from weanlings to four years old and twenty-five mares and fillies. In this list are two champion mares. A very enviable reputation for producing high-class Shire horses has been achieved by the Williams establishment. The coming sale is the first time they have ever offered any of their horses at auction, and the merit of the animals they will sell is of such a nature that they should command the attention of every farmer. There is no question but what the price of good draft horses is bound to get higher instead of lower. The rapid development of the country and particularly of the farming industry, means the constantly growing use of more horses. Good drafty geldings were never as scarce or as high as they are at the present time, and the farmer who is wise enough to buy one or more spans of good registered draft mares is the one who will reap the benefit of the high prices for horses, as well as having the heavy work on his farm done by the producing mares. The horses that Messrs. William will sell at Bushnell on January 15th will stand the closest inspection and we recommend them to our readers wanting Shires of the right type and proper breeding. The advertisement is on page 32, and catalogs can be secured by addressing C. C. & R. W. E. Williams, Box 107, Bushnell, Ill.

TO OUR readers who are interested in the purchase of some new fencing we would suggest that they look up the advertisement of the Brown Fence, page 12 this issue. They claim a special galvanizing process through which every rod of their fence is put. It is said that the wire itself is Basic Open Hearth Steel which is naturally porous, and this is drawn through the galvanizing spelter very slowly so the galvanizing becomes an actual part of the wire. They also carry a full line of farm gates, self-raising gates, lawn fence and gates. Write them for free catalog. Address The Brown Fence & Wire Co., Dept. 34, Cleveland, Ohio.

CHARLIE STEELE'S Duroc sale.—One of the good Duroc Jersey brood sow offerings that will be sold in northwest Iowa this winter will be that of C. R. Steele at Ireton, Iowa, on January 17th. It will be remembered that Mr. Steele won first prize on the Missouri Model Top spring boar at Sioux City last fall and he is offering a great line of sows bred to this hog. You will be interested in seeing his catalog. Write for it at once and mention The Homestead.

PULLING 100 stumps a day is said to be an easy job when the Hercules stump puller advertised on page 12 is used. It is not only a profitable machine for the farmer whose land is cleared, but it is a money-maker to the man who operates it. Our readers may obtain a book containing a great deal of important information on stump pullers by writing to Hercules Mfg. Co., 141 22d St., Centerville, Iowa.

THE Wm. Weis herd of A. J. C. C. Jersey cattle is to be sold Jan. 7, 1914. This event should attract the attention of every lover and breeder of these faun beauties within any reasonable distance. This sale will be a notable even in Jersey circles, because of the long line of fine breeding back of the animals, and too because of the opportunity it offers to procure so many daughters of these noted bulls, and also dams, daughters, and granddaughters. Mr. Weis has owned the herd two years, and during that time, there has never been a female purchased. He has relied wholly on the natural increase of the herd to keep his barn full. To do this he has purchased bulls of excellent breeding such as, Commodore Tonnenton, Olymphs Coffee Pogis Coffee, Bill McRioter, Farmers Son, Counts Commander and other equally famous. His herd therefore consists of animals descending from these great bulls. The conformation of the cattle, is equal to the breeding back of them, as they have inherited the characteristics which have made these so noted. With but one or two exceptions, they are of the large American type, straight top lines, with no droop at the rump, great spring of rib, and heart girth are their characteristics. The udders are the true Golden Fern, being long square built, with teats of good size. The offering consists of two herd bulls, seven aged cows; seventeen cows two to six years old, nine heifers, eight heifer calves, three bull calves. One of the herd bulls is a two year old which is of their own breeding. The other herd bull is also a two year old, named Brookhill Financial Count II, son of Brookhill Financial Count, that was 2d prize bull at the Wisconsin State Fair. He is a show animal himself and would win honors in any ring. His great grandson was Flying Fox, the great $5,000 bull. The train service to Palmyra, Wis., is very good both in arriving and leaving in either direction. Trains from the west arrive at 7:45-8:15-11:55 a. m., 5:30 p. m., trains from the east arrive at 9:15 a. m. 2:20-5:45-8:00 p. m. This permits of getting to the village and viewing the cattle before the sale, and leaving in either direction after the sale closes. Catalogs are now ready. Send for one at once and make your selections. See page 20 for advertisement of C. W. Mack & Son, Palmyra, Wis.

LACHMILLER'S public sale of Chester White sows, which takes place at Webster City, Iowa, January 6th, as will be noted in the advertisement on page 31, is the opening sale of the season of that breed and one which, although the numbers are not great, cannot fail to attract wide attention. This because Mr. Lachmiller has succeeded in producing sows which have to their credit size, well-arched backs, good feet and legs and with proportions that meet with the approval of every well posted Chester White breeder. Four of these animals are tried sows which have gilts in the sale. These older ones were sired by Joe, he a son of Sweepstakes, the Boyer hog that has a reputation as being one of the biggest of the breed. Others carry Goldmine blood. On the dam's side they show infusions of the blood of Leader 2d, Taylor Boy and others of note. The gilts are the get of Wonder 2d 22667, a yearling son of Charmer and grandson of Wonder. This hog tipped the scales at 610 pounds as a yearling and took second prize in class at the Iowa State Fair this fall. He comes from a line of prize winners, his sire having been a blue ribbon winner in 1912, his grandsire in 1911, and a half brother to his sire a sweepstakes hog in 1913. A few of the gilts are by Chief Elmo, a son of Longfellow, and others by White Rock, of Goldmine breeding. These sows will have been bred to Satre's Wonder, a hog of splendid proportions, even build, strong feet and general good character all over. He has wonderful length, an excellent head and a well arched back. His sire was Pathfinder 2d by Pathfinder and his dam, Iowa Queen by Chief's Model. The sale is one with quality enough to interest every breeder and The Homestead hopes that it may have the attention of all who feel the need of addition to their herds. Those who do not find it convenient to attend the sale may send mail or telegraph bids to C. C. Carlin, of The Homestead, who will be in attendance. For catalogs address J. H. Lachmiller, Webster City, Iowa.

DAVENPORT & MACK, Belmond, Ia., are still able to supply their customers with a few good Poland China boars of spring farrow. They are good, thrifty pigs, cholera immune and will be sold at reasonable prices. At the public sale which these gentlemen held on the 16th of December they disposed of thirty-four head at prices ranging from $15 to $60 each. There were too many in the sale for the crowd and the average obtained was not up to the value of the stock sold. Among the buyers were Will Anderson, Alexander, Iowa; G. J. Benz, Thornton, Iowa; B. C. Borcher, Nashua, Iowa; G. J. Bristow, Manley, Iowa; P. C. Barry, Belmond, Iowa; Chas. Campbell, Belmond, Iowa; Frank Evans, Dows, Iowa; J. C. Galbrook, Doherty, Iowa; N. Goranson, Thompson, Iowa; O. B Iverson, Popejoy, Iowa; F. W. Jurgens, Britt, Iowa; Wm. Lewis, Meservey, Iowa; Ed Lightbody, Thornton, Iowa; C. A. Man, Kanawha, Iowa; Frank Pester, Clarion, Iowa; O. J. Pardon, Clarion, Iowa; O. Rolean, Clarion, Iowa; A. D. Severn, Dows, Iowa; E. P. Simpson, Galt, Iowa; G. M. Stowers, Mason City, Iowa; J. A. Sheffield, Clarion; M. Swope, Clarion; Ole Tegland, Clarion; Otto Tegland, Clarion; Frank White, Clarion; John Woden, Clarion; Chas. Gelo, Belmond, Iowa. Col. J. A. Benson conducted the sale.

IN a letter ordering the big advertisement of big-type Poland China sows for sale at private treaty for sale on page 29, G. F. Marshall & Sons write "We have about thirty as good fall and spring yearling sows as can be found.

Dates Claimed for Live Stock Sales

A. F. HAGER'S SALE

DUROC JERSEY BRED SOWS

AVOCA, IOWA, JANUARY 12, '14

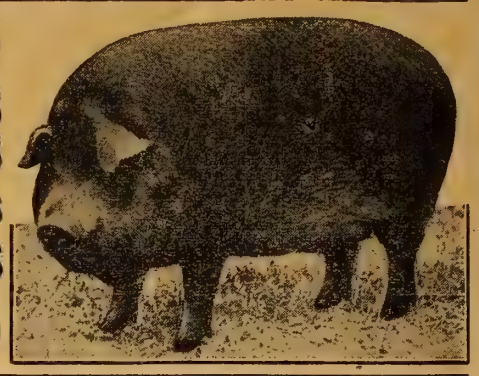
45 HEAD

10 TRIED SOWS AND FALL GILTS

5 SPRING YEARLINGS

30 GOOD GILTS

45 HEAD



I AM selling a great offering of sows in this sale—the best that has ever left my herd. Ten of my best tried sows and a grand lot of spring and fall yearlings and thirty of my choicest spring gilts. I am selling some excellent daughters of my two great boars, **A. F.'s Pilot Wonder** and **Model Gano,** in this sale. The thirty gilts are sired by these two boars and are the best ever. They are bred to **Model Gano,** one of the greatest sons of Col. Gano, **A. F.'s Pilot Wonder** and my great, young Golden Model boar. My sale is one of the first of the year. Come out and help make it a good one. Write for my great catalog and mention The Homestead.

A. F. HAGER, AVOCA, IOWA

COL. N. G. KRASCHEL, AUCTIONEER. M. T. WHITE, FIELD MAN FOR HOMESTEAD.

W. N. SHANKS' GREAT SALE

DUROC JERSEY BROOD SOWS

WORTHINGTON, MINN., JANUARY 14, '14

40 HEAD--20 YEARLING AND TRIED SOWS, 20 GILTS--40

HIGH MODEL FIRST AND CHAMPION AT IOWA AND SOUTH DAKOTA STATE FAIRS, 1912
FIRST IN CLASS AT MINNESOTA STATE AND INTERSTATE FAIRS, 1912
FIRST-PRIZE AGED BOAR AT IOWA AND NEBRASKA STATE FAIRS, 1913

25 BEST SOWS BRED TO MY GREAT BOAR, HIGH MODEL

I AM selling the greatest offering of sows that has ever been listed for sale in the Northwest. Included will be **Crimson Rose Again,** one of the greatest living daughters of the champion boar Crimson Wonder Again, and she is one of the greatest sows living. She is a decided show sow and she is bred to High Model. Two other good Crimson Wonder Again sows go in, both bred to High Model. Also **R. J.'s Medium,** the best daughter of Chief's Protection, sold in the Harding sale last winter. Three decidedly high-class fall sows sired by **Model Chief, Jr.;** others by old **Model Chief.** Two choice gilts by **Missouri Model Top.** Three good gilts by **King The Col.,** and others by **Golden Model 2d** and other noted boars. These are all bred to **High Model, Gano** and **Top Notcher Chief.** It is the greatest offering of sows you have ever seen listed for one sale. Cols. Duncan and Kraschel, auctioneers. M. T. White will represent The Homestead at the sale. Write for my catalog and kindly mention The Homestead. Address

W. N. SHANKS, WORTHINGTON, MINN.

Great big, stretchy, growthy, heavy boned sows, all best of backs, coats a color, nearly all sired by the great Giant King and bred to one of the best breeding boars living, Jumbo. He is in the 1,000-pound class. His get were sold early at good prices and we could have sold fifty more early boars from him had we had them. He breeds more length and bone than any boar we know of and the man who buys a sow bred to him will have pigs just a little bigger than the other fellow. These sows are all safe in pig and ready to ship. We have four out of a litter sister to Giant King and bred to Jumbo, long and big; four out of a Chief Price Again sow and bred to Jumbo, an extra good one out of the dam of Giant King and bred to Jumbo and 15 fall yearlings sired by Giant King and bred to Jumbo. Talk about your queens of the breed. Come and see the real thing in these big-type sows with their immense size, great length and heavy bone. All are good in head. No big cabbage leaf ears. All have best of feet. If you want something extra good, get after one or more of these sows. Every man who got a sow at our last winter's sale and saved the pigs say they had the best big-type pigs they ever saw and farmers picked them up at $50.00 each. We sold Jumbo boars at an average of $50.00 and we sold a lot of them, sending them to nearly every state where hogs are raised and if you want to get in the game and have the best big ones, then get a sow sired by Giant King and bred to Jumbo. Then you will have something to talk about and show to your neighbors. These sows are all immune. Have never had any sickness in our herd, but to be safe we had them all immuned two months ago." For additional particulars write or telephone to G. F. Marshall & Sons, Monroe, Iowa.

HAGER'S Duroc Jersey sow sale.—One of the very first of the Duroc Jersey brood sow sales that will be held in January will be that of A. F. Hager, at Avoca, Iowa, on the twelfth and he is selling a splendid lot in this sale. He is offering forty-five head, made up of fifteen tried sows, spring and fall yearlings and thirty spring gilts. The boars that Mr. Hager is using in his herd are A. F.'s Pilot Wonder, that is regarded as one of the best breeding boars in western Iowa; Model Gano, one of the best sons of old Col. Gano; and he is using a son of Golden Model 2d, and these sows that he will catalog for this sale will be bred to these boars. The Hager offering is a good one from one end to the other and is possibly the very best lot of sows he has ever listed for a sale since he has been engaged in the business. He is selling three yearling daughters of A. F.'s Pilot Wonder that are among the very best he will offer. These are all bred to Model Gano and they will look good in any herd. Nearly all of the older sows will be daughters of A. F.'s Pilot Wonder and there are some splendid sows among these. Then he is selling three very choice fall sows sired by A. F.'s Pilot Wonder and bred to Model Gano and these will look good to the breeders who attend this sale. Then there are three extra choice spring gilts by the same boar and they are out of a Proud Col sow and these are also bred to Model Gano. The thirty spring gilts that he is selling are sired by Model Gano, A. F.'s Pilot Wonder and a son of Osborn's Prince of Cols. The offering is very stretchy, full of quality and in many ways it will be one of the very choice offerings of the year. Write Mr. Hagar for a copy of his catalog and kindly mention The Homestead. M. T. White will represent this paper at the sale and will care for any bids sent in his care. See this page.

GEORGE EGGERT, Newton, Iowa, a well-known importer and breeder of Percherons, Belgians and Shires arrived home from Europe December 18th with his new importation of excellent specimens of the three breeds mentioned above. A Homestead representative has inspected the horses brought over and we can frankly state that they are the heaviest boned, biggest and best lot of stallions Mr. Eggert has ever had on his Oaklawn Farm. The prospective purchaser can find what he wants here if he wants the good ones. Mr. Eggert desires to wish his patrons a prosperous New Year and invites them as well as onyone else interested in good horses to visit his farm and look over his horses. See page 33 and when writing kindly mention The Homestead.

CHATHAM grain graders and cleaners make it possible for farmers to realize the top prices on their grains. This machine has been in use so many years that it would seem that every farmer would recognize its merits. It is built on correct principles, of best materials and is easily operated. The manufacturers have printed a copyrighted book entitled "The Chatham System of breeding Big Crops." This book is really of great educational importance. It may be obtained free together with description and prices of the grader by sending a request to the Manson Campbell Co., Dept. 50 Minneapolis Minn. See advertisement on page 8.

I. J. WILSON, West Branch, Iowa, will hold a Duroc Jersey bred sow sale at his farm adjoining town on January 7th. At that time he will sell fifty head consisting of two yearling sows by Col.'s Chief, a two year old by Crimson Wonder Chief, a three year old by Tip Top Wonder, six great yearling sows by Wilson's Defender, a litter mate to the great Disturber. These sows are a large, smooth, type and look like brood sows. There will be two good gilts by Golden Model II., out of a Chief Select dam. The balance of the gilts are sired by Wilson's Defender, Wilson's Crimson Wonder, and others. The sows and gilts will be bred to Wilson's Defender, Chief Gano, a son of the noted sire, Col. Gano, and out of an Ohio Chief bred sow, and Select Model, a son of Golden Model II. and out of a Chief Select sow. This is a high-class offering and as the sale is so early in the season they will sell cheaper than in the later sales. It will be a good place to get a well-bred sow, bred to a good boar at a reasonable price. The best of all every sow in the sale has been given the double treatment and, therefore, buyers need not fear of these sows taking the cholera. Write Mr. Wilson for a catalog mentioning The Homestead. Arrange to attend the sale, but if it is impossible for you to do so send a bid to Carlos C. Palmer, Homestead representative in care of Mr. Wilson and it will be properly handled to your interest. See page 36.

MESSENGER BOY 6179, is a Hampshire boar with a show record with which every man owning a Hampshire hog is acquainted. With the phenomenal show record of winning every grand championship at every state fair shown in 1912 and 1913, Messenger Boy is considered by a large number of the best breeders as the greatest Hampshire boar living. On February 24th the owner of Messenger Boy, Clayton Messenger, Keswick, Iowa, will sell 100 bred sows at auction. Fifty of these sows will be sired by Messenger Boy and bred to a grand champion boar, while the other fifty will be bred to this great sire. This sale will afford the Hampshire breeder a great opportunity to get a sow sired by or bred to the undefeated grand champion, Messenger Boy. Don't forget the date and watch for particulars in The Homestead. See page 31.

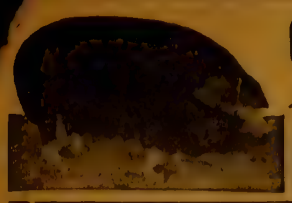
ONE of the grandest offerings of Duroc Jersey brood sows that the circuit will bring out will be that of Wellendorf & Son, Algona, Iowa, which takes place February 7th. A representative of The Homestead, who visited the herd last week, met with a surprise, as will those who attend the sale. It is a wonderfully uniform lot of sows with breed character and the most popular blood lines. Later announcements will appear in this paper.

SCHEETZ Short-horn sale.—One of the first Short-horn sales of the year is that of Louis H. Scheetz, Belle Plaine, Iowa, on January 6th. On that date he will sell fifty-five head consisting of twelve bulls and the balance cows and heifers. There will be about fifteen cows with calves at foot. Improver 2d 342773, the four-year-old red herd bull bred by the Thompsons, of Iowa City, is included in the sale. He is sired by the great breeding bull, Challenge Mysie and of the Marr Princess Royal family. This bull has sired a lot of good calves for Mr. Scheetz and he will do someone a lot of good. The calves by Improver 2d will show for themselves sale day. His grandam is by Victor Mysie 2d. Pride of Baron is a roan February bull calf in the sale by Baron's Pride and of the Scotch Isabella family. The balance of the bulls are of the useful sort and farmers will find bulls in this sale that will sire the right sort of steers. Mr. Scheetz is selling these cattle because he has a larger herd than he can handle and he is offering some of his best cattle. Next week we will give particulars regarding the female end of the offering. Seventeen draft horses will be sold including five mares safe in foal and an extra good two-year-old grade stallion weighing 1,700 pounds. Write Mr. Scheetz for a catalog mentioning The Homestead. His advertisement appears on page 34.

AN EXTRA good Percheron stallion and an outstanding Belgian horse have just been sold to Harry E. Hopper, Indianola, Iowa, by J. R. Justice, the importer at Galesburg, Ill. This makes fifteen head of imported Percheron and Belgian stallions and mares that Mr. Justice has sold to Mr. Hopper, who maintains a farm of about 1,800 acres adjoining Indianola, and it is safe to say there are very few farms where so good a selection of breeding horses can be found as are on this farm. Mr. Hopper is a broad gauged man who does things in a big way, and is buying the very best horses to be found, more with a view of helping the horse industry of his section than with any idea of pecuniary benefit to himself.

POLAND China bred gilts for sale.—Twenty-two head of good, large-type Poland China gilts are advertised for sale by W. T. Dubois, Greenville, Iowa, on page 37. Some of these are sired by his splendid boar, Colosso 2d, and are bred to D.'s Wonder a son of Ellerbroek's A Wonder and he in turn is out of a dam by Fesenmeyer's A Wonder. These gilts are all right and are bred for March and April litter. He will not make a public sale and, therefore, is offering these gilts privately. Write him for prices at once and mention The Homestead.

GIBBS' Short-horn sale.—One of the first sales of Short-horns to be made during the fore part of the year will be that of C. E. & H. R. Gibbs, which will be held at Klemme, Iowa, on January 6th. In writing us about this sale offering, Mr. C. E. Gibbs says: "Owing to the weather we were not



G. F. Marshall & Son's BIG-TYPE POLAND CHINAS

ALL IMMUNED. All fall and spring yearling sows. Most of them sired by the 1,200-pound Giant King and bred to the great 1,000-pound breeding boar, Jumbo (he by Big Jumbo). These sows are all of good colors, good length, heavy boned and as big as they grow. They are the best we ever had. They are bred for March and April litters. Also fall pigs by these noted big boars, weighing now from 75 to 100 pounds each. Write or 'phone your wants or better yet, come and see this good stuff. Mention The Homestead. Address

G. F. MARSHALL & SON, MONROE, JASPER COUNTY, IOWA.

able to sell as many cattle as we wished in our November 19th sale, so we are calling a sale for January 6th, at which time we will offer a class of cattle that both the breeders and the farmers can use. We have put on the market all known irregular breeders, so anybody buying cattle of us will be sure of getting breeding cattle of unquestioned merit. Among the many good cows we are selling is Victoria Lancaster, a beautiful roan heifer twelve months old, also Jean Britt, a splendid large red heifer, and a number of others of the same class. Another good cow is Kitty Marr 4th, a young red cow that we expected to put in the show ring next year. The man that is looking for milking Short-horns will find Venus, a large red cow, and Clara's Mysie, a splendid roan, both good propositions. They are both gentle and easy milkers, and their calves are above the average. Every female in our sale that is old enough to breed will be in calf to Red Duke 367977, a son of Sidelight. This bull is twenty-six months old and weighs 1,800 pounds and is not overfat. We expect to make him weigh 2,500 at four years old. Those who attend our sale will make no mistake in buying cows bred to him. We guarantee all stock to be breeders and as represented at ring side. Our sale offering affords breeders and farmers an opportunity to buy good and well-bred Short-horns at their own prices. We are not putting any frills on this sale, as we are going to let the buyers be the judges. It will, therefore, be bargain day for those who attend our sale. A number of good bulls will be offered. A number of good bulls will herds and this is all the more reason why you should attend this sale." Write Mr. Gibbs for catalog and be sure to go to the sale. See advertisement on this page.

EXTENSIVE experiments have proven very conclusively that to increase the yields of crops, that no one factor outside of the weather has as great effect as good seed. Those that take the time and go to the expense of properly preparing their lands certainly should not overlook the essential part of using only good seed to insure a good crop. Henry Campbell, Seward, Neb., has been in the pure-bred seed business for many years, and has himself perfected and improved many strains of good seeds. A little later in the season he will start an advertisement in The Homestead and we wish to ask Homestead readers that they give him some trial orders at least. Special effort has been put forth to get a good line of alfalfa, timothy, sweet clover alsyke and red clover, millet, cane, speltz, seed corn and in fact about everything in the line of seeds will be offered. Some attractive propositions in the way of alfalfa seed and sweet clover seed is now being offered. One can save money by ordering now. Address Henry Campbell, 100 Fifth St., Seward, Neb.

WALTER JOHNSON, Dorchester, Neb., breeds Polled Durham cattle, and he has also had a herd of Short-horns. Right now he has a Short-horn bull, a thrifty fellow, and a Short-horn cow and calf at foot that he will sell and he prices them worth the money. They will close out the Short-horn part of the herd, hence he will name a very attractive price on them. He also has a three-year-old Polled Durham bull that he will sell worth the money. He is a strong vigorous fellow and has been a sure breeder, and has not been used hard. Interested parties will do well to address Mr. Johnson without delay. Kindly mention The Homestead when you write.

THE mildness of the weather so far this fall has led many people to neglect to provide the necessary clothing for winter protection. There always has been, at some time or other, in every winter a demand for a good fur coat and there will be this winter. Farmers who have horsehides or cowhides may have them tanned and made into coats or robes at a slight cost and thus obtain winter protection that is as good as can be secured. In an advertisement on page 21 premiums of caps, gloves, or mittens are offered to patrons of the Mickle Fur Coat & Robe Co., of Mason City, Iowa. Write for particulars of this excellent offer.

HAVING sold all his Poland China boars, E. J. Augspurger changes his advertisement on page 31 so as to announce a sale of bred gilts. He thinks he has something extra good to offer. They are bred to Jumbo's Big Prospect, Equal Wonder (a grandson of A. Wonder) and Wayside Wonder. The latter is also by A. Wonder and out of a Big Joe dam. Mr. Augspurger also has for sale a good Polled Durham bull and an April yearling Short-horn bull. Address inquiries to E. J. Augspurger, Pulaski, Iowa.

MARMION'S Poland China advertisement on page 37 is an attractive one because it offers good big-type Poland China gilts for sale and guarantees them to satisfy the buyer. In a recent letter Mr. Marmion says: "I want to thank The Homestead for the good trade I have enjoyed on my big-type Poland Chinas. Not a man who came to inspect my herd left without buying. Seventy-five per cent of the animals sold went to buyers within a radius of fifty miles from my farm. I am now offering for sale litter sisters to the boars sold and they are equally as good. These are bred to my young herd boar, Wonder Jumbo, a fourteen months old hog that has a ten-inch bone and weighs 540 pounds. Among these gilts are some extra good ones by Cox's Wonder. Their progeny will represent the strains of blood carried by Rood's Giant, Long King, A Wonder and Jumbo Junior. I have also some fall pigs for sale." For complete descriptions and special prices write to B. F. Marmion, R. F. D. 2, Farmington, Iowa.

IN OUR Date Claim columns this week will be found the announcement of E. Williams, Exira, Iowa, claiming January 12th on which to hold a public sale of Hereford cattle. The sale is to take place at Atlantic, Iowa. Mr. Williams on the above date will sell forty-two head of good Hereford cattle, consisting of thirty cows, twelve with calves at foot, and twelve good bulls. See advertisement on page 30.

COWNIE takes all the chances on hides that may be shipped to the Cownie Tanning Co. for tanning or to be manufactured into coats or robes. He makes the statement that he can save 50 per cent to his patrons. He proves it all in a large illustrated catalog which is sent free to any reader of this paper who writes to Cownie Tanning Co., 508 Market St., Des Moines, Iowa. See page 21.

WRITING with reference to his Poland China herd, C. H. Porter, Eagle Grove, Iowa, says: "My hogs are outgrowing anything, taken as a whole, that I have ever raised. They have big bone, good feet, color and size. If nothing happens I will put through the sale ring February 24th a lot of gilts less than a year old that will weigh 400 pounds or better and are not fat." See advertisement on page 37.

IMMUNED Chester White gilts are advertised by W. H. Dunbar, Jefferson, Iowa, on page 31. Mr. Dunbar's record as a breeder and in the show ring entitles him to the consideration of those who are in search of stock. Everything he offers has been given the double treatment and may be considered immune from disease.

DUROC Jersey fall sows, bred to Big Wonder, the grand champion Iowa State Fair boar, are advertised for sale by the Economy Stock Farm, Shenandoah, Iowa, on page 36. Now is the time to buy one of these sows and they will make you money another year. Mention The Homestead when writing them.

THE Butler welded tank heater illustrated in the advertisement on page 9 is an appliance that will pay for itself every winter on any farm where live stock are kept. For prices and circular address Butler Manufacturing Co., 1244 W. 10th St., Kansas City, Mo.

RIGHT prices will be made on yearling and two-year-old registered Shropshires by S. Bennington's Sons, Elkader, Iowa, as per advertisement appearing on page 23 of this issue. These ewes are sired by imported and have been bred to imported rams.

ALL THE various articles required to make the use of a silo economical are advertised on page 20 and fully described in a catalog, for which write to Columbian Steel Tank Co., 1602 W. 12th St., Kansas City, Mo.

GROWERS of sweet clover assert that it is the biggest money-maker known. For facts concerning secure circular and free samples from the A. A. Berry Seed Co., Box 203, Clarinda, Ia.

CLOSING out Poland China boars.—Those of our readers who have not as yet bought their boars should write at once to W. H. Barr & Son, Villisca, Iowa, as they are closing out their entire crop at the most liberal prices. They write us they have eleven head of heavy boned spring boars and two fall boars and the two-year-old boar, B.'s Mastodon. They have so much of this boar's get in their herd they cannot use him to advantage any longer so have decided to sell him. He has been one of the best breeding boars they have ever owned and he is a great bargain to the man that can use him. Understand they are making special prices on all of these boars in order to move them. So get busy and order from them right away and you will get a real bargain in both boars and the prices asked. Mention The Homestead when writing Mr. Barr.

KITSELMAN fence, the kind that has been selling direct from factory for so many years and at factory prices is advertised on page 9. The price quoted is very small. The Kitselman is adapted to all purposes. Write for free catalog. Address Box 290, Muncie, Ind.

HANSEN'S Duroc bred sow sale.—One of the first sow sales of the winter season will be that of John Hansen, Herman, Neb., on January 10th. He will sell four tried sows, eight fall yearlings and the remainder will be spring gilts. Included in his offering will be a number of daughters of Sun Beam Girl, his noted grand champion sow at the Nebraska State Fair, 1912. John has a good line up for this sale and you will be interested in seeing his catalog. Write for it at once and mention The Homestead.

FIFTEEN Duroc Jersey boars of spring farrow are offered for sale by A. J. De Young, Sheldon, Iowa, whose advertisement will be found on page 31. He describes them as being extra good, but that owing to the need of room in preparing for his January 1913 sale, he will close them out at extremely low prices.

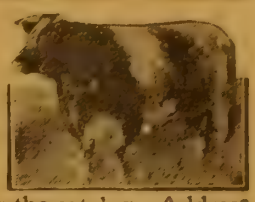
FARMERS or breeders who are in search of Short-horn bulls are referred to the advertisement of H. F. Hoffman, Birmingham, Iowa, which will be found on page 31. Mr. Hoffman advises us that these are good animals with the prospect of making great size and that he will sell them at reasonable prices.

MARLIN repeating rifles have been standards of perfection for a great many years. The new Model 27 repeating rifle is illustrated in an advertisement on page 24. While this is strictly

WADE'S GREAT REDUCTION SALE OF SHORT-HORNS

WILL BE HELD IN SALE PAVILION IN

COLUMBUS, NEBRASKA, TUESDAY, DECEMBER 30, 1913



THE sale offering will consist of practically the entire herd of choice Short-horns. They have been bred from the best of foundation material and represent the highest type of real UTILITY SHORT-HORNS. Some of these cattle are pure Scotch, others of the choice American families. Not a one listed but that is of known value or of rare promise. Herd-heading bulls and a select lot of producing cows and choice heifers make up the offering. There will be about thirty head. Good hotels and train service at Columbus. You will be made comfortable. Spend the day with us. Col. Z. S. Branson, auct. Mention The Homestead and apply for the catalog. Address

O. E. WADE - - - RISING CITY, NEBRASKA.

C. E. & H. R. GIBBS' SALE

SHORT-HORN CATTLE

Scotch and Scotch-topped and Some Splendid Milking Short-horns . . .

Klemme, Iowa, January 6, 1914

AS I WILL be away the greater part of the year, we are closing out the greater part of our herd, which consists of some good Scotch cows and choice heifers, twelve to sixteen months old. About half of this offering are roan, and any young breeder wishing to start a roan herd will find a good opportunity here at the right price. There will be several good bulls in the sale, two of which will be suitable to head pure-bred herds. If you want good Short-horns at your own prices come to my sale. Col. Thos. Egan, auctioneer. Address

C. E. & H. R. Gibbs, Klemme, Ia.

A CRIMSON WONDER AUCTION

ANNUAL DUROC JERSEY SOW SALE

ALGONA, IA., SATURDAY, JAN. 10

I AM putting into this sale a lot of sows that carry a stronger infusion of the blood of that great old fountain head of champions, Crimson Wonder I Am, than ever has or ever will go into a sale ring. Five of his daughters, 14 yearling granddaughters and a bunch of spring gilts. All are bred to Golden Model Jr. or Crimson Wonder Am I. They are cholera immune. They are only in thrifty breeding form. Breeders who appreciate quality in its everyday clothes will like this bunch. Farmers will recognize them as moneymakers. N. G. Kraschel, auctioneer. C. C. Carlin field man for Homestead. Catalogs ready. Address

U. G. DAVIDSON, ALGONA, IOWA

a high-class gun it is one which is sold at a remarkably low price. A catalog of 128 pages describes it in full and quotes the special prices available to the reader of this paper. Write for it to the Marlin Fire Arms Co., 135 Willow St., New Haven, Conn.

WILLIAMS' Hereford sale.—If you want to see a good offering of Hereford cattle make it a point to attend the sale of E. Williams, Exira, Iowa, the same to be held at the Swab Feed Barn, Atlantic, Iowa, on January 12th. Mr. Williams concluded to make this sale at Atlantic because of the railroad connections and this point is easily accessible to everybody and from everywhere. He is selling thirty good cows in this sale, twelve of which have big lusty calves at foot, and twelve head of bulls He is selling a wonderfully good lot of cows in this sale and more 1,600 and 1,800-pound cows than have been seen in one sale in many a day. Every cow in the sale will either have calf at foot or will be bred and safe in calf. These cows were originally purchased from the best and most noted herds in this country, and Mr. Williams always selected the good ones. For instance he is selling a couple daughters of Bright Duke and Gold Bug, two of the most noted bulls that were used at the head of the Minier herd a number of years ago. Then he has cows from the Ben Broughton and Gudgell & Simpson herds, always the tops of their offerings, as well as many other good ones from other noted herds. Among the good individuals will be Glendora, a six-year-old cow, a wonderfully thick cow, with a nice head and horn, and a cow that would be a credit to any herd in the land. Lady Bug and Sparkle are both excellent cows, large and breedy and both of these are daughters of Minier's old Gold Bug. These cows were the very best that the Minier Bros., sold in their last sales. One of the good daughters of Bright Duke is named Carl, and she has been one of the greatest breeding cows he ever owned. She is a large, droop-horned cow and a splendid individual, and sells with a nice heifer calf at foot. Bellflower is the other daughter of Bright Duke, and she is also a good cow. Bessie Lee is another great cow, has been a prize winner in times past and she sells with a pair of twin bull calves at foot by Dudley B Lady Superior is a Will Wheeler Beau Donald bred cow, and she is quit choice, as is also Lady Dunlap, a Gudgell & Simpson bred cow. Another very choice cow we would have you notice on sale day is Catherine, a Beau Donald Hesiod bred cow, and she is well along in calf to Dudley B. Few better money-making propositions will be offered during the year. Rose Melter is a 1,800-pound cow and a good one. She has been a show cow and is one of the best in the herd Beatrice 2d, was the top of the Ben Broughton sale and she is an outstanding good one. Beau Maid is another 1,800-pound cow that has been a show cow and you will very seldom see in one sale three as good cows as these last named. In the bull offering will be the splendid herd bull, Dudley B., a son of the champion bull, Dudley. He is a five-year-old bull, a good individual and an excellent breeder. He has a droop horn, just like his famous sire. is a mellow fleshed bull and an easy keeper, and he is a remarkably good breeding bull. Mr. Williams has so many of his heifers now in the herd he has decided to sell him in the sale. Another good five-year-old bull is Corrector Britton, a son of Anxiety Britton and he is a large, big-boned bull, and one that will do excellent service. Refiner is a splendid yearling bull that is a son of Beau Perfection, together with a nice string of young bulls. If you want Herefords it will pay you to attend this sale. Write E. Williams, Exira, Iowa, for catalog and kindly mention The Homestead. Remember the sale will be held at Atlantic, Iowa, right in town. See advertisement on page 30.

BERKSHIRE boars of April and May farrow, weighing from 135 to 225 pounds, are offered at prices ranging from $20 to $35 by M. A. O'Brien, whose advertisement appears on page 38. These hogs are registered. Fifty sows are also offered for sale. Address inquiries to M. A. O'Brien, R. 2, Reedsville, Wis.

EVERYONE usually wishes to do business with those that are making a success at the particular line in which they are engaged. Those seeking a good stallion will buy from those that are able to do a good business, for if they do a good business they must have good stock and offer them at prices in keeping with their real value. Few men have done as well in the draft horse business as have Wolf Bros., Albion, Neb. These gentlemen have imported some of the really choice horses that have come to Nebraska in recent years, and their stock have been persistent winners, not only in their hands, but in the hands of others as well. These gentlemen now assert that they will save Homestead readers a big of money on a high-class stallion or a span of mares if purchased within a short time. They have a big lot of good stock, and they wish to close them out as rapidly as possible. It will pay those that are interested to get in touch with them immediately, for their offering is a good one. Kindly write them and when doing so, mention The Homestead.

POLLED Durham bull for sale.—In a recent letter from W. H. Barr, Villisca, Iowa, he says he still has his splendid herd bull, Crowder, that he is offering for sale. He is a three year old and weighs 1,800 pounds in pasture, is very gentle and easy to handle and a splendid breeding bull. He wants to sell him and is making the price where he should not last long. Write Mr. Barr at once regarding this bull and kindly mention The Homestead.

EMERSON CRABS, Aledo, Ill., is a breeder of Duroc Jerseys who has had excellent sales this year, having sold his entire crop of boars numbering sixty-seven head and all of his gilts. He has nothing to sell at present in the Duroc line, but in the poultry department of this paper he is offering Rose Comb Rhode Island Red and White Wyandotte cockerels and pullets of the best of strains. Write him for prices, mentioning The Homestead.

SCOTCH COLLIE pups, eight weeks old can be purchased of J. E. Smith, proprietor of White View Kennels, Victor, Iowa, as per his announcement on page 15. He has a fine litter of sable and white male and female pups that are farm raised and natural heelers. The males are priced at $10 each and the females at $5. Write Mr. Smith kindly mentioning The Homestead.

JOHN G. HURLEY, Welton, Clinton Co., Iowa, announces on page 31 that he wishes to sell four good Polled Durham cows with October calves at foot and four two-year-old heifers. All have been bred Red Marshall; a bull that was a first-prize winner at the International in 1911 and also at the Kentucky State Fair the same year.

FRANK KEAN, Mt. Pleasant, Iowa, in furnishing copy for his new advertisement on page 31 writes as follows: in regard to his Duroc Jerseys: "I am sold out of males. I am breeding a choice lot of gilts and aged sows for last of March and April farrow that will be sold worth the money."

THE free catalog of the Ironclad incubator advertised on page 14 is sold at a remarkably low price together with a brooder of the same size. Freight charges are prepaid east of the Rockies. A catalog tells all about it. Get one by writing to Ironclad Incubator Co., Department 111, Racine, Wis.

READERS of The Homestead wishing to purchase choice Poland China boars, sired by Western Hadley 189195, he by Big Hadley 167563, will be interested in the advertisement of E. R. McAllister, Emmetsburg, Iowa, appearing on page 31 of this issue.

FARM fence suitable for hog fence, poultry, ordinary stock-turning purposes is advertised on page 9 and at remarkably low prices. For special information and free catalog address Coiled Spring Fence Co., Winchester, Ind.

HEREFORD cattle, both bulls and females are offered by Warren Landers, Savannah, Mo. The very best bulls are represented in the pedigrees of Mr. Landers' cattle. Note page 35 for his advertisement.

POLAND China bred sows at the low price of $25 each should interest farmer readers of The Homestead, and we are quite sure they will. Herman Schmale, DeWitt, Neb., is offering some at that price. He is also offering some boars at $22.50 each and they are really bargains at the price. They are mostly sired by Wonder Price by A Wonder and a few are by Pawnee Tall by Pawnee Chief. This line of breeding is good and it is big stuff. Mr. Schmale is a good man to do business with, and we believe he treats the buyers better than himself, for this stock he is offering should sell for more money. Order without delay, as they will certainly not last long at the prices offered.

HIGH MODEL—CHAMPION DUROC JERSEY
Owned by W. N. Shanks, Worthington, Minn. See field note on page 26.

ENTERPRISE sausage stuffers and lard presses are advertised on page 17. No one wants to be told what these machines are because they are right and always have been right. They are made in various sizes and sold at the prices quoted in the advertisement. Catalogs of these and other machines made by the same company may be obtained by writing to The Enterprise Mfg. Co., Dept. 83, Philadelphia, Po.

JERSEY bulls carrying strong infusions of St. Lambert blood are offered at particularly attractive prices by M. A. O'Brien, R. 2, Reedsville, Wis. See advertisement on page 20.

IMMUNE Poland China boars are being closed out by A. W. Stewart, Harlan, Iowa, at $20 and $30. Read his advertised on page 37.

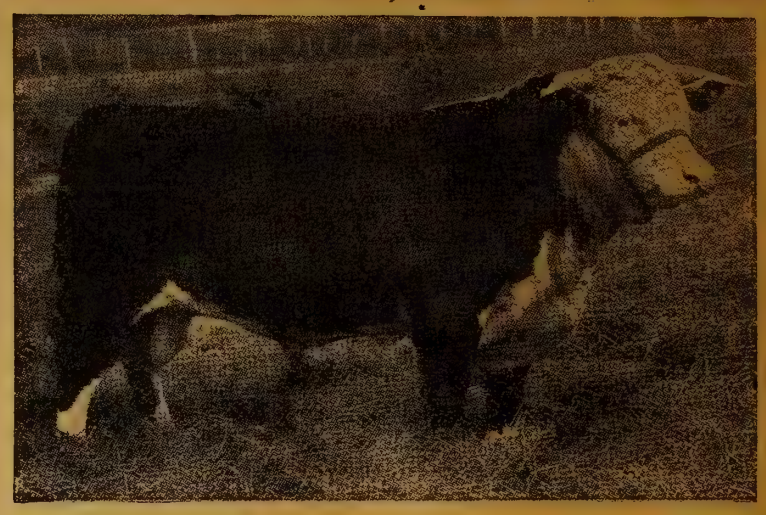
POLLED Durham and Short-horn bulls are advertised by D. S. Brown, Geneseo, Ill., on page 34.

E. WILLIAMS' SALE

HEREFORD CATTLE

ATLANTIC, IOWA, JAN, 12, 1914

42 HEAD— 30 FEMALES, 12 BULLS —42 HEAD



I AM selling the greatest lot of females that has been offered in a public sale here in the West in many a day. You will find more 1,600 and 1,800-pound cows in my sale than you have seen offered in the past decade. Twelve cows will have big, lusty calves at foot and are bred again, and every cow in my sale will either have calf at foot or will be in calf. The cows will mostly all be bred to my splendid herd bull, Dudley B., and the calves at foot of dams are nearly all sired by him. Among the good cows offered will be daughters of the well-known bulls, Bright Duke, Gold Bug, Anxiety Britton, Beau Perfection and other noted sires. These cows were originally selected from the most noted herds in this country and were invariably the tops of those herds. I am selling twelve bulls, including my great herd bull, Dudley B., a five-year-old son of the champion bull, Dudley, and he is a splendid individual and a grand good breeding bull. Corrector Britton, another good herd bull, will be offered, and Refiner, a splendid yearling bull, together with a nice string of young bulls. Write for my catalog at once and mention The Homestead. Address

COL. FRED REPPERT, Auctioneer.

E. WILLIAMS, Exira, Ia.

ZENOR BIG POLAND CHINA SALE

THE EVENT OF THE BIG-TYPE EVENTS

WOOLSTOCK, ICWA, MONDAY, FEB. 16

FIFTY big-type sows, hig with quality, and no discount on the blood lines. Direct from the Crow, Ellerbroek and Lentz herds, and others of note. Tried brood sows that have daughters in the sale, fall yearlings, spring yearlings and spring gilts. They carry the best backs, and have the best feet and legs you ever saw in any big-type sale ring. They are the kind you have been looking for. They are bred to Wonder's King 67705 (by Fesenmeyer's A Wonder and out of Mammoth Giantess' Equal, by Long King's Equal). He is a litter brother to Pfander's King of Wonders. He is 36 inches high, and has a 10½ inch bone. Hig pigs are of the good, broad headed sort. Sows are bred to Longfellow 4th. Everything immune by double process I want you to come and see these sows. J. A. Benson, auctioneer. Send mail or wire bids to C. C. Carlin, in my care. See catalog for magnificent breeding. Address

F. M. ZENOR, WOOLSTOCK, IOWA

NEWS OF THE SALE RING

The Joy Poland China Sale.

A good average crowd attended the sale of Andy Joy at Herman, Neb., on December 19th, and he made an average of $42 on everything. It was a good offering, his gilts being especially good. No high prices were paid, but it was an even range, and everybody got good values. Col. E. Z. Russell cried the sale and did good work. Below we report those selling for $25 and above:

1.	James Broderson, Herman, Neb.	$47.50
2.	J. C. Ackerman, Herman, Neb.	52.50
3.	Rufus West, Herman, Neb.	40.00
4.	Tom Barry, Blair, Neb.	49.00
5.	Ike Wilbaum, Herman, Neb.	45.00
6.	Chas. Rogers, Herman, Neb.	52.00
7.	H. O. Williamson, Herman, Neb.	62.00
8.	Clarence Thuirer, Fostoria, Ia.	47.00
9.	Rob Anderson, Blair, Neb.	39.00
10.	Joseph Lyons, Herman, Neb.	45.00
11.	R. A. Schug, Coleridge, Neb.	50.00
12.	R. A. Anderson, Blair, Neb.	40.00
13.	Wm. Hugelman, Wakefield, Neb.	35.00
14.	Frank Rainier, Logan, Iowa.	32.00
15.	James Broderson	40.00
16.	Frank Rainier	40.00
17.	Clarence Thuirer	39.00
18.	Frank Poeschel, West Point, Neb.	39.00
19.	E. A. Tucker, Pender, Neb.	35.00

20.	R. A. Schug	45.00
21.	Peter Miller, Herman, Neb.	39.00
22.	Joseph Lyons	45.00
23.	Joseph Lyons	45.00
24.	Jas. Broderson	27.00
25.	E. A. Tucker	41.00
26.	Frank Rainier	37.00
27.	Frank Poeschel	46.00
28.	G. O. Youell, Herman, Neb.	29.00
29.	Jas. Broderson	35.00
30.	C. F. Wilde, West Point, Neb.	48.00
31.	Frank Davis, Holbrook, Neb.	32.00

The Clio Short-horn Sale.

The conditions seemed all against the Breeders' Short-horn Sale at Clio, Iowa, on December 18th, and the outcome was not what it otherwise might have been. Late trains arriving after four o'clock in the afternoon did not help things, and as Colonel Graham was coming on this train, it devolved upon the Colonel Fennell, and home auctioneers to open the sale. These boys did good work until the arrival of Colonel Graham, who then took charge of the sale. The average was $75 on everything, but it was not by any means commensurate with the offering. As we have heretofore said breeders could buy cattle cheaper in this section of the state than anywhere else, and those who did not attend were the losers thereby as there were some great bargains offered. The top of the sale was the splendid Scotch cow, Lady Athene, and she was purchased by M. H. Wetson, Seymour, Iowa, at $172. The old bull, Avalanche 2d, went to Riley Ritchie, Allerton, Ia., at $142.50 and he was a good bargain at that figure. W. Preston Donald was one of the strongest buyers and he secured some of the best cattle as did also S. R. Walloel, Ainsworth, Iowa, and Luck Bros., Arthur Finney, Cainesville, Mo., also got some of the good ones. Those who did attend certainly got some splendid bargains.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, December 20th.—Despite the presence of 34,500 cattle on the local market Monday the highest prices of the year were paid for prime yearlings, "babies' realizing $10@10.25 per cwt., but this afforded no criterion of general conditions in the market which was deluged with half-fat stuff, discarded by feeders with the avowed intention of saving corn. Liquidation was stamped all over the run, the country having lost confidence in the future of the cattle market. Thousands of short-fed cattle arrived, and if the feed bill was less onerous, or the market prospects brighter 70 per cent of them would have been fed another sixty to ninety days.

By common consent the beef steer market is called 25@40c lower than last week on everything except the specialties, but some veracious salesmen assert that they were compelled to discount last week's best prices 50c per cwt. to get a clearance.

Taken from all angles the week's market has been eminently unsatisfactory, especially on cattle selling below $8.25 with which the runs has been freighted. The week's receipts here are around 67,000 and it has been a case of too many, although but little in excess of the same period a year ago. Sooner or later winter will get down to business and there is a disposition to dodge the market glut that must inevitably ensue. To aggravate matters a lot of long-fed cattle are still showing up and their season is about over. There has been no scarcity of 1500 to 1700-pound bullocks this week and $8.50@8.80 has bought a lot of them. There has been a pronounced disposition this week to "buy 'em all at one price." This is seasonable, as after holiday trade has been satisfied the long-fed steer has little advantage at the market over one that has been on feed only ninety days. Scrambling for little cattle with quality has been a pronounced trade feature this week. They have been as scarce as the big brutes have been plentiful and everybody wanted a few, consequently the $9@10.25 grades of yearlings have had a market of their own. But the demand did not extend to cheap light cattle of which there has been a surplus and the $7,75@8.25 week have been bad actors. Quotations:

Inferior to rough grass steers	$6:50@7.80
Common to plain steers	7.10@7.50
Plain to medium warmed-ups	7.55@7.75
Medium to good steers	7.75@8.15
Good to choice corn-feds	8.15@8.60
Choice to prime heavy beeves	8.65@9.10
Common to fair yearling	7.70@8.30
Good to prime yearlings	8.50@8.75

She stock values have gone over the bumps this week along with steers, an exception to the rule being choice corn-fed heifers on the yearling order which have been in the specialty class alone with steer yearlings of choice grade and much wanted for the filling of Christmas orders. Best fed heifers close steady with a week ago, but a point lower than the early week high spot when a full car load of prime grade made $9.25 and when there was a heifer end on yearlings selling at $10.25, the year's open market top. Everything else closes irregularly 10 to 25c lower for the week. Canners and prime cows showing the least and fair to good butcher cows and a slippery and medium killing grade of heifers the most loss. The stiff premium being enjoyed by the few prime heifers coming is not expected to be maintained, now that Christmas demands have been met, but the rest of the butcher market now appears to be down to a notch which buyers will encounter difficulty in lowering, although no breadth to demand is to be expected until after the holidays. It is largely at $5 to $6 market for bulk of the fair to extra good butcher cows, a surprisingly good class going at $5.50, while the sale list carries a slim representative of prime corn-fed heifers up to or above the $7 notch. In the heifer line sales above $7.75 are rare and $7.25 is taking a good corn-fed class, while many light slippery heifers of plain to good class are going down to $6.25@6.75 and a common, light fleshed kind down to $5.50 and lower. Bulls have had an irregular price slump. Canner and stocker grades suffering no more than 10@15c, but bulk of the medium to good bolognas 15@25c and big weights both of bologna and fat class showing 25@40c declines. Calves of choice grade sold well early in the week, but slumped off sharply after Christmas orders were filled and nearly all vealers as well as good heavy calves are closing $1 lower than a week ago. Quotations:

BEEF COWS.

Common to fair	$4.60@5.00
Fair to good	5.00@5.60
Good to choice	5.60@6.15
Choice to prime heavy	6.15@7.00
Prime to extra dry fed	7.00@7.60

CANNERS AND CUTTERS.

Inferior canners	$3.25@3.50
Poor to fair canners	3.60@3.85
Good heavy canners	3.90@4.15
Fair to good light cutters	4.15@4.35
Good heavy cutters	4.35@4.60

HEIFERS.

Poor to medium	$5.00@5.75
Medium to good	5.75@6.40
Good to choice	6.40@7.25
Choice to prime heavy	7.25@8.00
Good to prime fed yearlings	7.25@8.25
Prime to fancy yearlings	8.25@9.15

BULLS.

Canner and poor light	$4.60@5.35
Light to medium bolognas	5.40@5.60
Good to ch. heavy bolognas	5.70@5.90
Plain to good beef	5.90@6.25
Choice to prime beef	6.35@7.40

CALVES.

Inferior to fair heavy	$ 4.50@ 5.50
Fair to good heavy	5.50@ 6.00
Good to choice heavy	6.00@ 6.75
Good to ch. stock calves	6.75@ 7.75
Medium to ch. med. weights	6.50@ 7.75
Fair to good vealers	9.25@ 9:75
Good to prime vealers	9.75@10.25

Stock and feeding cattle values present few mutations from a week ago. Some decline was enforced at the week's opening, but country demand developed fairly good breadth the latter half of the week, the decline was for the most part recovered and a better clearance made than last week. Demand from the East has been narrow, Pennsylvania being well filled up from the runs of Canadian stockers when the rush of such stock through the Buffalo gateway was on following the lowering of the tariff bars, but there has been decent demand from Ohio and Michigan, while Indiana and Illinois have taken hold somewhat freely and Kentucky stillery feeders have absorbed a good many. Good light cattle have had the call again and selected yearlings topped the week's market at $7.50, aside from a few breedy calves at higher rates. It has been largely a $6.15@6.85 market for fair to good stockers and a $675@7.25 trade on bulk of the fairly desirable to choice 800 to 1000-pound feeders, with best fleshy heavy feeders at $7.45. Narrow demands until after the holidays is a trade expectancy. Quotations:

Best selected, 950 to 1150 lbs.	$7.25@7.50
Best selected, 650 to 800 lbs.	7.10@7.50
Good to ch., 60 to 1000 lbs.	6.60@7.10
Fair to good, 600 to 800 lbs.	6.10@6.60
Com. to fair, 500 to 700 lbs.	5.35@6.10
Inferior to com., 500 to 700 lbs	4.85@5.35
Good to choice stock heifers	5.65@6.25
Poor to good stock heifers	4.75@5.65
Good to choice stock cows	5.00@5.35
Poor to good stock cows	4.50@5.00
Good to choice stock calves	6.75@7.75

The first half of the week registered the arrival of 150,000 hogs and the week's total will reach about 224,000, or several thousands more than the week previous and the largest week's total for five years. All around the market circle the horizon wears a hoggy appearance, but the movement savors of liquidation and means spring and summer scarcity. The present movement is freighted with 140@190 pound shoats, while there is an unseasonable scarcity of heavy weights. The break this week may check the marketward movement, but the country is in selling mood. In five days, this week the eleven principal primary points received 650,000 hogs, against 618,000 last week and 450,000 a year ago, and the figures speak for themselves.

Considering the fact that combined hog receipts at Chicago the first three weeks of this month will total about 750,000 the market has held up wonderfully well. The general average price on Friday was $7.61 or 12c lower than a week ago, 7c lower than two weeks ago and only 4c lower than three weeks ago.

While pigs have largely disappeared at the market there is a profusion to 150 to 200-pound stuff in the run and growers' anxiety to unload young hogs forecasts a shortage of material for the lard kettle. Stock yard opinions is not always reliable, but there exists confidence of short hog runs along in March and materially higher prices. Friday's closing quotations follow:

Bulk of sales	$7.55@7.65
Mixed, 215 to 250 lbs	7.45@7.60
Mixed, 170 to 200 lbs	7.40@7.50
Medium weights	7.55@7.65
Light butchers	7.55@7.60
Heavy butchers	7.65@7.70
Light shippers	7.50@7.55
Heavy shippers	7.65@7.75
Heavy packing	7.55@7.65
Rough heavy packing	7.40@7.50
Throwout packing sows	7.00@7.40
Fair to choice light	7.35@7.55
Light-light 135 to 155 lbs	7.20@7.40
Pigs, good to fancy	6.90@7.60
Pigs, inferior to fair	6.00@6.80
Boars, inferior to fair	2.00@3.50

Improbability that cheap mutton is likely to follow free trade was suggested this week, when a London order for fat sheep reached Chicago. British market conditions warrant the purchase of wethers at $5.25 per cwt., a price at which they are not available. Argentine exports of frozen mutton have decreased rapidly of late and British production of mutton and diminished to an extent that makes importation of American sheep possible. Despite elimination of the duty fat sheep are now worth 50 per cwt. more on the Chicago market than a year ago. Such authorities as Frank J. Hagenbarth, of Idaho, and Robert S. Matheson, of Chicago, predict an acute scarcity of both lambs and mutton, a condition for which free wool will be to some extent responsible, that prospect having caused wholesale liquidation by flock masters of the trans-Missouri region. Canada is already buying 75 per cent of the ovine stock it needs in Montana. One packing concern has frozen and forwarded to Winnipeg from St. Paul and Chicago during the past two months some 30,000 fat sheep carcasses and demand from that quarter is for more.

LACHMILLER'S CHESTER WHITE SALE

Bred Sows and Gilts at

WEBSTER CITY, IA., JAN. 6, 1914

FOUR tried sows and 20 spring gilts, sired by Joe (son of Sweepstakes) Wonder 2d (his 1st prize winner at Des Moines), Chief Kind and White Rock Bred Sutro's Wonder (son of Pathfinder). Size quality and finish. Cholera proof. Sale on farm. Col. Marvel, auctioneer. Send bids to C. C. Cairn.

HOMEWOOD STOCK FARM

Our regular Fall Importation of

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

ARRIVED in October, and are now on sale at our barns. The stallions are mostly two year olds and the mares are yearlings and two year olds. In addition we have on hand some extra weighty three and four-year-old stallions, both imported and American bred, from which to make selections. We guarantee all our animals in every way, and sell under a 60 per cent breeding guarantee. Horses priced as low as is consistent with good quality and rich breeding. Write us today.

We can sell you a better horse for less money than you can find at any other establishment.

S. METZ & SONS, **HOMEWOOD, ILLINOIS**

Homewood is 23 miles south of Chicago on Illinois Central railroad, with trains every hour.

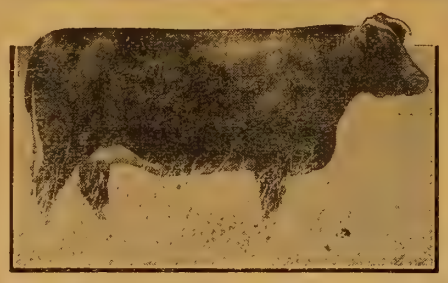
SALE OF SCOTCH AND SCOTCH-TOPPED SHORT-HORNS

TO BE HELD AT THE FARM, THREE MILES FROM

BELLE PLAINE, IOWA, TUESDAY, JANUARY 6, 1914



55 HEAD---43 FEMALES AND 12 BULLS---55

I AM selling a splendid lot of good useful cows and heifers and some rugged young bulls. There will be **Lavender, Orange Blossom** and other popular families in the offering. I am selling my herd bull, **Improver 2d 342773,** a Princess Royal, sired by Challenge Missie, used successfully by S. H. Thompson's Sons for several years. The young heifers and bulls are sired by Improver 2d. Several cows are by Count Inglewood, a Scotch son of Imp. Inglewood, and a few heifers are by Royal Star, a Scotch son of Coming Star. The cows are regular breeders, good milkers and easy feeders. **17 DRAFT HORSES** will be sold; 5 mares safe in foal and a good two-year-old grade Shire stallion weighing 1,700 pounds. Cols. McIlrath and Cubbage, Auctioneers.

They Like the Hog-Joy Vermin Killer

THIS picture is one of many taken from life in the Hog lot. Note that the outlines of the shoat are very indistinct. This is because the animal was rubbing its head so energetically that the camera could not record the outlines.

Let Your Hogs Try Hog-Joy 30 Days FREE and Rid Themselves of Vermin

At this time of year dipping is dangerous to your hogs. It's dangerous in summer too, and always troublesome and costly. **The Hog-Joy Oiler operates automatically;** requires no attention; can't break or get out of order, because simply built of cast iron—only three parts. Not affected by severest weather. **Use crude oil,** or any patent fluid.

Endorsed by leading hog raisers. We'll send you the machine on 30 days' free trial; freight paid east of the Rocky Mountains and west of the Alleghenies. Price $10.00; refunded if not satisfied. Reference, any banker.

Write today and get our liberal proposition,

THE HOG-JOY COMPANY, 301 N. 5th St., Springfield, Ill.

...sers Praise the Hog-Joy

...J. Daniel, Gilliam, Mo.: "I have had the machine only two weeks, and have never seen anything to equal it."

Elmer Burchett, Adair, Ill.: "I like my Hog-Joy fine. I would not be without one of them."

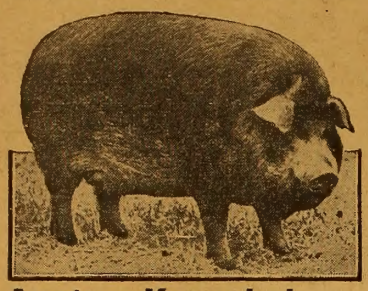
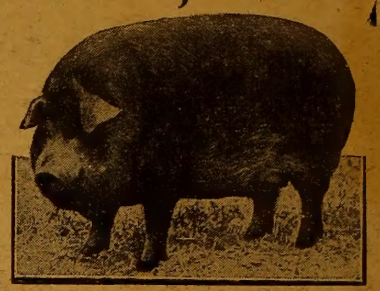
WILSON'S DEFENDER DUROC SOW SALE

TO BE HELD AT THE FARM ADJOINING

WEST BRANCH, IOWA, WEDNESDAY, JANUARY 7, 1914



50 IMMUNE DUROCS 50



MY herd has had the double treatment. There will be 14 aged and yearling sows, among them 6 grand, big, smooth, long, yearling sows by Wilson's Defender, the great litter mate to Disturber. There will be 2 good gilts by Golden Model 2d, dam by Chief Select. The other 34 gilts are sired by Wilson's Defender and Wilson's Crimson Wonder. The sows are bred to Wilson's Defender, Chief Gano and one of the good sons of Col. Gano and Select Model, a son of Golden Model 2d, and out of a Chief Select sow. I have the kind that will suit the breeder and the farmer. The breeding is as good as the herd books contain. Send bids to Carlos C. Palmer, Homestead field man, in my care. Write me for catalog, mentioning The Homestead.

Aucts.—Kraschel, Albin and Gibson

I. J. WILSON, WEST BRANCH, IOWA.
